Quality Control Report

124 Heritage Avenue Unit 16
Portsmouth, NH 03801
www.absoluteresourceassociates.com

Case Narrative
Lab # 67839

Sample Receiving and Chain of Custody Discrepancies

Samples were received in acceptable condition, between 0 and 6 degrees C, on ice, and in accordance with sample handling, preservation and integrity guidelines.
The analyses performed met the requirements of Absolute Resource Associates' Quality Assurance Plan and the requirements set forth by the associated Sampling and Analysis Plan dated December 2022 (final), except as noted below.
Absolute Resource Associates is an ISO/IEC 17025:2017 DoD accredited "Testing Laboratory" through PJLA with an accreditation # 78237. The analyses performed met the requirements of Absolute Resource Associates' Quality Assurance Plan. Parameters included in the ARA current DoD certification also met the requirements set forth by the current DoD Quality Systems Manual, except as noted below. See included table for analytes or parameters not included in ARA scope of DoD accreditation, if applicable.

Calibration

Metals: Samples associated with continuing calibration verifications (CCV) that do not meet the acceptance criteria are re-analyzed for those particular elements. In circumstances where the same elements do not meet the acceptance criteria in the re-analysis, the results are reported with qualifiers. (Percent recovery range between 75% and 125%)

Method Blank

EPH: A reportable concentration of the range, Unadjusted C11-C22 Aromatics and C11-C22 Aromatics, was detected in the BLK17157. There is no impact to the data as these ranges were not detected above the LOQ in the associated field samples.

Surrogate Recoveries

EPH: The sample 67836-011 and LCSD17156 did not meet acceptance criteria for the extraction surrogate 1-chloro-octadecane. No additional sample volume remains for re-analysis. The results have been qualified accordingly.

Laboratory Control Sample Results

VOC: The LCSD2303756 did not meet the acceptance criteria for m&p-xylenes. This compound showed high recovery. There is no impact to the data as this analyte was not detected in the associated samples.
VOC: The LCS/D2303766 did not meet the acceptance criteria for diethyl ether, 1,3-dichloropropane, and m&p-xylenes. These compounds showed high recoveries. The relative percent difference between the LCS and LCSD2303766 was outside the acceptance criteria for 1,1,2-trichloroethane. There is no impact to the data as this analyte was not detected in the associated samples.
VPH: The relative percent difference between the LCS and LCSD2303859 was outside the acceptance criteria for Unadjusted C9-C12 Aliphatics. There is no impact to the data as this range was not detected in the associated samples.

SVOC: The LCS/D17124 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17124 was outside the acceptance criteria for one compound. No additional sample volume remains for re-analysis. The results have been qualified accordingly.
SVOC: The LCS/D17145 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17145 was outside the acceptance criteria for several compounds. No additional sample volume remains for re-analysis. The results have been qualified accordingly.
EPH: The LCS17156 did not meet the acceptance criteria for C9-C18 Aliphatics. This range showed low recovery. No additional sample volume remains for re-analysis. The results have been qualified accordingly. The relative percent difference between the LCS and LCSD17156 was outside the acceptance criteria for naphthalene and 2-methylnaphthalene. There is no impact to the data as these compounds were not detected in the associated samples.
EPH: The LCS/D17157 did not meet the acceptance criteria for C9-C18 Aliphatics and C19-C36 Aliphatics. These ranges showed low recoveries. No additional sample volume remains for re-analysis. The results have been qualified accordingly.

Matrix Spike/Matrix Spike Duplicate/Duplicate Results

Not requested for this project.

Other

QC: Due to spiking concentrations or expected concentrations being below the LOQ in the LCS/D &/or MS/MSD the following compounds have been reported in these QC samples with lower LOQs to show calculated percent recoveries: benzoic acid, benzidine, and C9-C18 Aliphatics.
Reporting Limits: Dilutions performed during the analysis are noted on the result pages.

No other exceptions noted.

Data Qualifiers

U = This compound was analyzed for, but not detected above the associated limit of detection.
J = The analytical result was below the instrument calibration range, but above the method detection limit. The reported concentration is an estimate.
m = An "m" next to the "Response" value reported on the raw data sheets indicates a manual integration was performed.

Abbreviations for Manual Integrations

BC = Baseline Correction: The software integration of the baseline was inappropriate for the chromatogram
MI = Mis-Identification: The software integrated the incorrect peak
PS = Peak Separation: Two peaks exist in the chromatogram but the software integrated them as one
RI = Range Integration: Software does not perform range integrations, must be performed manually
NB = Noisy Baseline: Software mis-integrated due to a noisy baseline
PM = Peak Missed: Software did not integrate the target peak

Absolute Resource Associates does not hold DoD Certification for the following analytes:

Waters

Analyte	CAS	Reference
1,3,5-trichlorobenzene	108-70-3	SW5030C8260D
1,4-dioxane	123-91-1	SW5030C8260D
diethyl ether	60-29-7	SW5030C8260D
tetrahydrofuran (THF)	109-99-9	SW5030C8260D
azobenzene	103-33-3	SW3510C8270E

GLOSSARY

%R	Percent Recovery
BLK	Blank (Method Blank, Preparation Blank)
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CRM	Certified Reference Material (associated with solid Metals samples)
CRMD	Certified Reference Material Duplicate (associated with solid Metals samples)
Dil'n	Dilution
DL	Detection Limit
DUP	Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection
LOQ	Limit of Quantitation
MB	Methanol Blank (associated with solid VOC samples)
MLCS	Methanol Laboratory Control Sample (associated with solid VOC samples)
MLCSD	Methanol Laboratory Control Sample Duplicate (associated with solid VOC samples)
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PB	Preparation Blank
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference
SUR	Surrogate

Reviewer Checks:

- Quant Report: Reviewed, Analyst Initials & Date
- Chromatogram Checked, Major peaks identified
- Results consistent w/ other attached analyses
- Reanalysis reason noted
- Substitute dilution data checked
- Correct dilution and reason clear or noted
- Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
- Other QC failures or issues noted in Aspen
- Correct data file and/or date/time in Aspen

Notes:

Reviewer Checks:
Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

Reviewer Checks:
Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

Notes:
Reviewer Initials & Date:

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

Notes:
Reviewer Initials & Date: 12/7/23

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

Notes:
Reviewer Initials & Date: 12/7/23

Reviewer Checks:
Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen
12/7/23

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date

Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted

Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

Notes:

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

12/7/23

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date

Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted

Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

12/7/23

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

Notes:
Reviewer Initials & Date: 12/7/23

Reviewer Checks:

Quant Report: Reviewed, Analyst Initials & Date
Chromatogram Checked, Major peaks identified
Results consistent w/ other attached analyses
Reanalysis reason noted
Substitute dilution data checked
Correct dilution and reason clear or noted
Flags checked (Expiration, F+, Over Cal, Surr, Aspen, QC)
Other QC failures or issues noted in Aspen
Correct data file and/or date/time in Aspen

12/7/23

Reviewer Checks:

- Quant Report: Reviewed? Ranges integrated? Analyst Initials & Date?
- Chromatogram Checked? Major peaks identified?
- Soil prep data checked: weight, volume, %solid, Prep date
- Field ID consistent with data and any field replicates
- Results consistent with any re-runs & internal QC
- Substitute dilution data checked
- Correct dilution and reason clear or noted
- Reason for reanalysis documented
- Surrogates pass or flagged & noted
- Flags checked (Expiration, F+, Over Cal)
- Other QC failures, estimates or interferences documented
- Spot checked Reported Result with Quant Report
- Checked Audit flagged data in LIMS

Reviewer Checks:

- Quant Report: Reviewed? Ranges integrated? Analyst Initials & Date?
- Chromatogram Checked? Major peaks identified?
- Soil prep data checked: weight, volume, %solid, Prep date
- Field ID consistent with data and any field replicates
- Results consistent with any re-runs & internal QC
- Substitute dilution data checked
- Correct dilution and reason clear or noted
- Reason for reanalysis documented
- Surrogates pass or flagged & noted
- Flags checked (Expiration, F+, Over Cal)
- Other QC failures, estimates or interferences documented
- Spot checked Reported Result with Quant Report
- Checked Audit flagged data in LIMS

Reviewer Checks:

- Quant Report: Reviewed? Ranges integrated? Analyst Initials & Date?
- Chromatogram Checked? Major peaks identified?
- Soil prep data checked: weight, volume, %solid, Prep date
- Field ID consistent with data and any field replicates
- Results consistent with any re-runs & internal QC
- Substitute dilution data checked
- Correct dilution and reason clear or noted
- Reason for reanalysis documented
- Surrogates pass or flagged & noted
- Flags checked (Expiration, F+, Over Cal)
- Other QC failures, estimates or interferences documented
- Spot checked Reported Result with Quant Report
- Checked Audit flagged data in LIMS

Reviewer Checks:

- Quant Report: Reviewed? Ranges integrated? Analyst Initials & Date?
- Chromatogram Checked? Major peaks identified?
- Soil prep data checked: weight, volume, %solid, Prep date
- Field ID consistent with data and any field replicates
- Results consistent with any re-runs & internal QC
- Substitute dilution data checked
- Correct dilution and reason clear or noted
- Reason for reanalysis documented
- Surrogates pass or flagged & noted
- Flags checked (Expiration, F+, Over Cal)
- Other QC failures, estimates or interferences documented
- Spot checked Reported Result with Quant Report
- Checked Audit flagged data in LIMS

Reviewer Checks:

- Quant Report: Reviewed, Analyst Initials & Date
- Chromatogram Checked, Major peaks identified
- Prep data checked: weight, volume, %solid, Prep date
- Field ID consistent with data and any field replicates
- Results consistent with any re-runs & internal QC
- Correct dilution and reason clear or noted
- Reason for reanalysis documented
- Surrogates pass or flagged & noted
- Flags checked (Expiration, Over Cal)
- Other QC failures, estimates or interferences documented
- Spot checked Reported Result with Quant Report
- Checked Audit flagged data in LIMS
- Correct values averaged
- Column RPD is OK or both results included
- Correct column reported

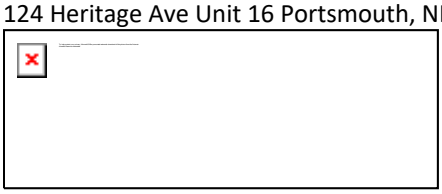
Subject: 67836 & 67839 Samples

Hi Allison,



A few things we noticed with "Dow Salvage Yard" we had questions on.

Sample "SY-BRMW5-29-44-110823" from Group 1 samples had headspace in both vials. Would you like us to proceed with analysis?

Sample "SY-BRMW4-138-148-110923" from Group 2 samples had no volume in the second vial, so we only have the first vial to run for VPH analysis.

Thanks,
Olivia

Subject: 67839 Dow - sampled 11-09-23

Hi Allison,

I'm having difficulty reconciling the Field IDs and sampling times for 2 samples on the attached CoC, identified as 67839-02 & -11 with FUDSChem:

Field Sample	**Collection Date/ Time**
SY-BRMW10-42-52-110923	11/09/2023 13:55
SY-BRMW40-138-148-110923	11/09/2023 9:05

Can you let me know how to proceed?

Thanks,
Cliff

SQ6112

Sample Receipt

The following samples were received on November 07, 2023 and were logged in under Katahdin Analytical Services work order number SQ6112 for a hardcopy due date of November 28, 2023.

KATAHDIN Sample No.	CREDERE Sample Identification
SQ6112-1	SY-OBMW7-110623
SQ6112-2	SY-OBMW10-110623
SQ6112-3	TB30-110623

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

We certify that the test results provided in this report meet all the requirements of the NELAP standards unless otherwise noted in this narrative or in the Report of Analysis.

We certify that the test results provided in this report are accredited under the laboratory's ISO/IEC 17025:2017 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation L2223.

Analytes which are reported but not listed on our ANAB scope of accreditation will be "^" flagged and the following language will be included in the case narrative for all DoD compliant work: "^" Indicates this analyte is not included on Katahdin Analytical Services DoD-ELAP Scope of Accreditation.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Heather Manz**. This narrative is an integral part of the Report of Analysis.

Organics Analysis

The samples of Work Order SQ6112 were analyzed in accordance with Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), V (2015) and VI (2019), and/or "Analysis of Dissolved Methane, Ethane, and Ethylene in Water Samples Using a GC Headspace Equilibration Technique", EPA Method RSK175, Revision No.2, May 2004, and/or for the specific methods listed below or on the Report of Analysis.

RSK 175 v.2 Analysis

The target analyte methane was detected below ½ the LOQ in the method blank WG345521-1. According to the DoD QSM, a method blank is considered to be contaminated if the concentration of any target analyte in the blank exceeds ½ the reporting limit and is greater than 1/10 the amount measured in any sample. Since the method blank was acceptable, no further action was taken.

8260C SIM Analysis

There were no protocol deviations or observations noted by the organics laboratory staff for this analysis.

8270D SIM Analysis

Sample SQ6112-2RA had low recoveries for the extraction surrogates 2-methylnaphthalene-d10 and pyrene-d10 that were outside of the DoD QSM acceptance limits. The client was contacted on 12/06/2023 and the laboratory was instructed to proceed with narration.

The method blank WG345173-1 had a high recovery for the extraction surrogate 2-methylnaphthalene-d10 that was outside of the DoD QSM acceptance limits. As this would indicate a high bias, and there were no target analytes detected in the method blank, no further action was taken.

The LCS WG345173-2RA had a high recovery for the extraction surrogate 2-methylnaphthalene-d10 that was outside of the DoD QSM acceptance limits. Since the recoveries of the spiked target analytes were acceptable, no further action was taken.

The initial calibration analyzed on the N instrument on 12/01/2023 had %RSD values for analytes that exceeded the method acceptance limit of 20%. For these analytes, either a linear or quadratic model was used for quantitation instead of an average response factor. The target analytes indeno(1,2,3-cd)pyrene and dibenzo(a,h)anthracene failed for both the linear and quadratic models in the initial calibration curve due to the correlation coefficient and the coefficient of determination being less than the method acceptance criteria of 0.995 and 0.990 respectively. These compounds were calibrated using the average model.

The initial calibration on the N instrument on 12/01/2023 had RSE values for the target analytes benzo(a)pyrene and benzo(g,h,i)perylene that were outside of the acceptance limits.

Note: The Form VII has a column for %D that is set to 20%. The DoD QSM criterion for an opening CV is 20%D and a closing CV is 50%D. All of the compounds in the CV's were evaluated to either 20% criteria for opening CV's or 50% criteria for closing CV's.

The closing CV (file N0323) had low responses for the internal standards chryseme-d12 and perylene-d12, which were outside the DoD QSM acceptance limits of -50% to +100% of the responses of the internal standard of the mid-point level calibration standard from the initial calibration. If a closing CV fails, the DoD QSM allows for the analysis of two additional CV's which do not need to be within the 12-hour window. The two additional CV's (files N0324 and N0325) were analyzed, and all three CV's are reported.

There were no other protocol deviations or observations noted by the organics laboratory staff.

Wet Chemistry Analysis

The samples of Work Order SQ6112 were analyzed in accordance with the specific methods listed on the Report of Analysis.

Analyses for hexavalent chromium were performed according to Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), V (2015) and VI (2019).

Analyses for alkalinity, ferrous iron, and total organic carbon were performed according to "Standard Methods for the Examination of Water and Wastewater", 15th, 16th, 17th, 18th, 19th, and 20th editions, 1980, 1985, 1989, 1992, 1995, 1999. APHA-AWWA-WPCF.

Analyses for chloride, nitrate, and sulfate were performed according to “Methods for the Determination of Inorganic Substances in Environmental Samples”, EPA 600/R-93/100, August 1993.

All Wet Chemistry results were evaluated to Katahdin Analytical Services’ Method Detection Limits (MDL). Measured concentrations that fall between the MDL and Katahdin’s Limit of Quantitation (LOQ) are flagged “J”. Measured concentrations that are below the MDL are flagged “U” and reported as “U LOD”, where “LOD” is the numerical value of the Limit of Detection.

All analyses were performed within analytical holding times. All quality control criteria were met.

On the raw data packet for the total organic carbon (TOC) analysis, the calibration curve used for processing the TOC data for the samples of work order SQ6112 is marked as having expired on 11/24/23 (the samples were analyzed on 12/1/23). Katahdin’s Standard Operating Procedure for TOC analysis states that calibration curves are only valid for 3 months, but this is in the process of being updated to the most current standards which state that these calibration curves do not have a 3-month expiration date.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Quality Assurance Officer, or their designee, as verified by the following signature.

01/03/2024

Jennifer Prescott
Quality Assurance Officer

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Katahdin Analytical Services, LLC. **Sample Receipt Condition Report**

Client: Credere Associates	KAS PM: HHM	Sampled By: Client
Project:	KIMS Entry By: JGB	Delivered By: UniShip
KAS Work Order#: SQ 6112	KIMS Review By: HHM	Received By: EP
	Labeled By: EP	
SDG #:	Cooler: 1 of 1	Date/Time Rec.: 11-7-23 1008

Receipt Criteria	Y	N	EX*	NA	Comments and/or Resolution
1. Custody seals present / intact?	✓				
2. Chain of Custody present in cooler?	✓				
3. Chain of Custody signed by client?	✓				
4. Chain of Custody matches samples?	✓				
5. Temperature Blanks present? If not, take temperature of any sample w/ IR gun.	✓				Temp (°C): 1.1° ✓ Thermometer ID: IR-1
Samples received at <6 °C w/o freezing?	✓				Note: Not required for metals (except Hg soil) analysis.
Ice packs or ice present?	✓				The lack of ice or ice packs (i.e. no attempt to begin cooling process) or insufficient ice may not meet certain regulatory requirements and may invalidate certain data.
If yes, was there sufficient ice to meet temperature requirements?	✓				
If temp. out, has the cooling process begun (i.e. ice or packs present) and sample collection times <6hrs., but samples are not yet cool?				✓	Note: No cooling process required for metals (except Hg soil) analysis.
6. Volatiles: **Aqueous:** No bubble larger than a pea?	✓				
Soil/Sediment: Received in airtight container?				✓	
Received in methanol?				✓	
Methanol covering soil?				✓	
D.I. Water - Received within 48 hour HT?				✓	
7. Trip Blank present in cooler?	✓				
8. Proper sample containers and volume?	✓				
9. Samples within hold time upon receipt?	✓				
10. Aqueous samples properly preserved? Metals, COD, NH3, TKN, O/G, phenol, TPO4, N+N, TOC, DRO, TPH – pH <2	✓				
Sulfide - >9				✓	
Cyanide – pH >12				✓	
11. Bottleware Prepped on:					

* Log-In Notes to Exceptions: document any problems with samples or discrepancies or pH adjustments.

SAMPLE DATA SUMMARY PACKAGE

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 Please refer to cover letter or narrative for further information.

H_ Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount
exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

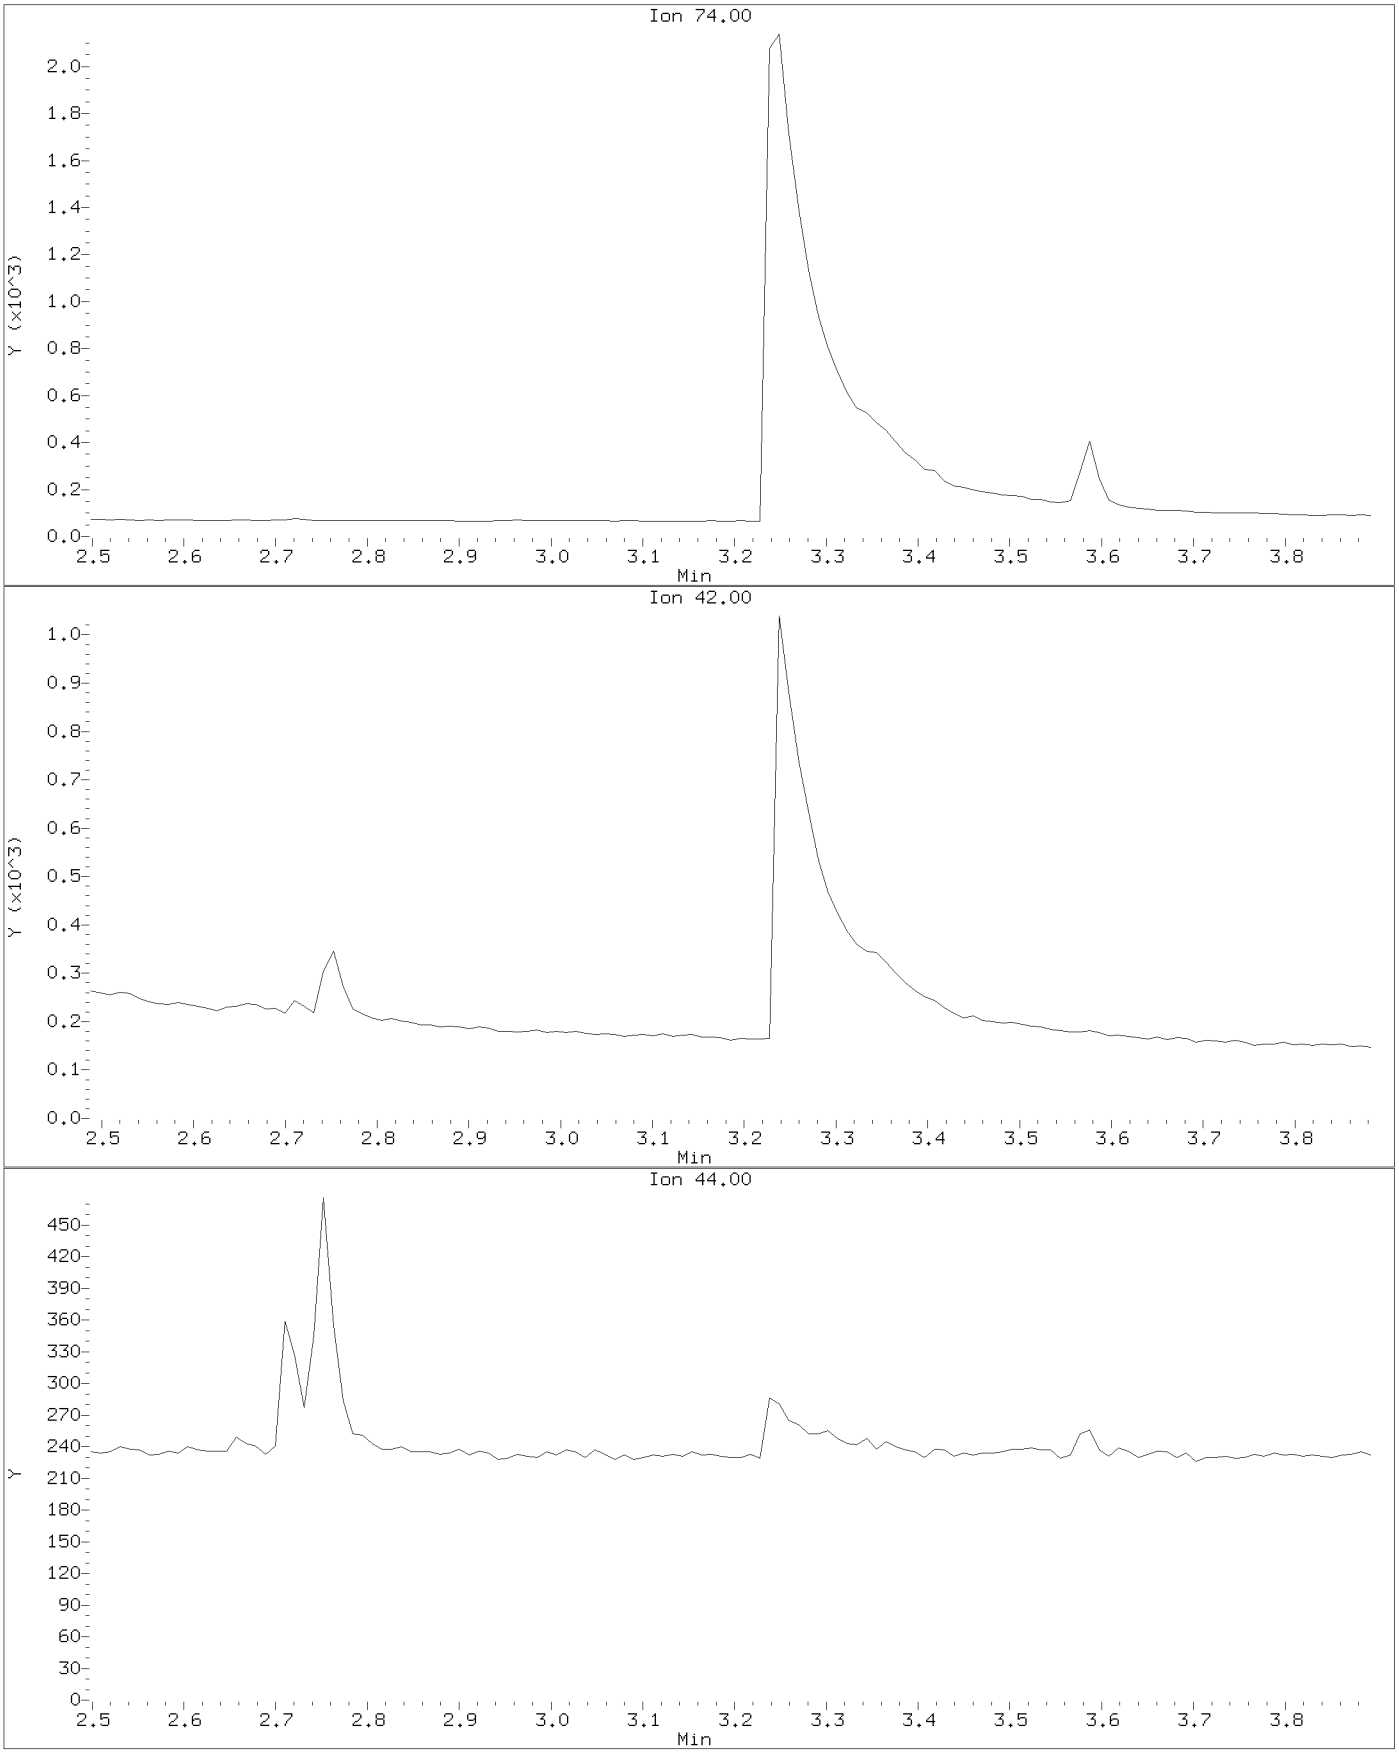
QC Flag Legend



a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
H - Operator selected an alternate compound hit.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client. Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 Please refer to cover letter or narrative for further information.

H_ Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit	NOD	No Odor Detected
NFL	No Free Liquid Present	FLP	Free Liquid Present	TON	Threshold Odor Number

D-1 As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

D-4 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

D-5 The seed control factor did not meet the method criteria of greater than 2.0 mg/L of dissolved oxygen (DO) uptake over the five day period of incubation. The dilution closest to meeting the criteria was used to estimate the seed control factor.

KATAHDIN ANALYTICAL SERVICES, LLC
CARBON ANALYSIS RUN INFORMATION SHEET

INSTR. ID: analytikjena multi N/C **ANALYST:** CJB **DATE:** 12-01-23

FILE NAME: 120123 **METHOD(S):**

TOC	DOC	TIC
• EPA 415.1	• EPA 415.1	• EPA 415.1
• SM5310B	• SM5310B	• SM5310B
• SW9060	• SW9060	• SW9060

CALIBRATION DATE: 08/24/23 **CALIBRATION ANALYST:** CJB

Calibration standards were prepared by performing dilutions of the following standard on the day of calibration:

Calibration Source Standard ID	Prep Date	Expiration Date	Standard Conc. (mg/L)
W22102	08/24/23	11/24/23	1000

Note: Calibration must be performed quarterly or whenever a change in analysis conditions warrant. A copy of the associated calibration data is attached to this run.

STANDARDS USED:

Standard Name	Standard ID	Prep Date	Expiration Date	Standard Conc.
CCV #	W22343	11/16/23	2/16/24	1000 mg C/L
LCS	W22282	11/03/23	02/03/24	50 mg C/L
MS Stock Std. *	W22343	11/16/23	2/16/24	1000 mg C/L
Alkalinity Check	W22285	11/02/23	02/02/24	15 mg/L (Inorg. C)

CCV prepared by adding 4.0 mL of CCV Std. to 36 mL of DI.
* Matrix spikes are prepared by adding 2.0 mL of MS Stock Std. to 38 mL of sample.

Additional Comments and Notes:

SQ5971-9 was an aut of hold due to machine failures on previous runs. SQ5971-9 was ran with a dilution because it was extremely discolored and cloudy. -CJB 12/4/23

aj-Analyzer multi N/C 3100; multiWin 4.12; Serial No: N3-2320/AX

Sample Receipt

The following samples were received on November 08, 2023 and were logged in under Katahdin Analytical Services work order number SQ6133 for a hardcopy due date of November 29, 2023.

KATAHDIN Sample No.	CREDERE Sample Identification
SQ6133-1	SY-OBMW6-110723
SQ6133-2	SY-OBMW4R-110723
SQ6133-3	SY-OBMW12-110723
SQ6133-4	SY-BRMW2-60.5-70.5-110723
SQ6133-5	SY-OBMW15-110723
SQ6133-6	SY-OBMW5-110723
SQ6133-7	SY-OBMW13-110723
SQ6133-8	SY-BRMW2-80.5-95.5-110723
SQ6133-9	SY-OBMW14-110723
SQ6133-10	SY-BRMW2-252.5-262.5-110723
SQ6133-11	TB31-110723

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

We certify that the test results provided in this report meet all the requirements of the NELAP standards unless otherwise noted in this narrative or in the Report of Analysis.

We certify that the test results provided in this report are accredited under the laboratory's ISO/IEC 17025:2017 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation L2223.

Analytes which are reported but not listed on our ANAB scope of accreditation will be "^" flagged and the following language will be included in the case narrative for all DoD compliant work: "^" Indicates this analyte is not included on Katahdin Analytical Services DoD-ELAP Scope of Accreditation.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Heather Manz**. This narrative is an integral part of the Report of Analysis.

Organics Analysis

The samples of Work Order SQ6133 were analyzed in accordance with Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), V (2015) and VI (2019), and/or "Analysis of Dissolved Methane, Ethane, and Ethylene in Water Samples Using a GC Headspace Equilibration Technique", EPA Method RSK175, Revision No.2, May 2004, and/or for the specific methods listed below or on the Report of Analysis.

Samples SQ6133-3 and 8 were used for the matrix spikes (MS) and matrix spike duplicates (MSD) per the client request.

RSK 175 Analysis

The target analyte methane was detected below ½ the LOQ in the method blank WG345593-1. According to the DoD QSM, a method blank is considered to be contaminated if the concentration of any target analyte in the blank exceeds ½ the reporting limit and is greater than 1/10 the amount measured in any sample. Since the method blank was acceptable, no further action was taken.

8260C SIM Analysis

The reported percent recovery acceptance limits for the Laboratory Control Samples (LCSs) were evaluated using DoD QSM acceptance limits. The recoveries of the spiked analytes in the LCS, LCSD, Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are compared to these acceptance limits. Katahdin standard operating procedure is to take corrective action only if the number of spiked analytes in the LCS that are outside of the QC limits is greater than the DoD QSM allowable number of exceedances. If the associated MS/MSD has greater than the allowable number of exceedances, no corrective action is taken, as long as the LCS is acceptable.

8270D SIM Analysis

Due to a laboratory error, the MS/MSD WG345531-5 and 6 were extracted two days out of hold time.

The MS WG345301-5 and MS WG345531-5 had high recoveries for the extraction surrogate 2-methylnaphthalene-d10 that were outside of the DoD QSM acceptance limits.

Note: The Form VII has a column for %D that is set to 20%. The DoD QSM criterion for an opening CV is 20%D and a closing CV is 50%D. All of the compounds in the CV's were evaluated to either 20% criteria for opening CV's or 50% criteria for closing CV's.

The closing CV (file N0407) had low responses for the internal standards acenaphthene-d10, phenanthrene-d10, chrysene-d12, and perylene-d12, which were outside the DoD QSM acceptance limits of -50% to +100% of the responses of the internal standard of the mid-point level calibration standard from the initial calibration. If a closing CV fails, the DoD QSM allows for the analysis of two additional CV's which do not need to be within the 12-hour window. The two additional CV's (files N0408 and N0409) were analyzed, and all three CV's are reported.

The closing CV (file N0430) had low responses for the internal standards chrysene-d12 and perylene-d12, which were outside the DoD QSM acceptance limits of -50% to +100% of the responses of the

internal standard of the mid-point level calibration standard from the initial calibration. If a closing CV fails, the DoD QSM allows for the analysis of two additional CV's which do not need to be within the 12-hour window. The two additional CV's (files N0431 and N0432) were analyzed, and all three CV's are reported.

The closing CV (file N0453) had low responses for the internal standards chrysene-d12 and perylene-d12, which were outside the DoD QSM acceptance limits of -50% to +100% of the responses of the internal standard of the mid-point level calibration standard from the initial calibration. If a closing CV fails, the DoD QSM allows for the analysis of two additional CV's which do not need to be within the 12-hour window. The two additional CV's (files N0454 and N0455) were analyzed, and all three CV's are reported.

The reported percent recovery acceptance limits for the Laboratory Control Samples (LCSs) were evaluated using DoD QSM acceptance limits. The recoveries of the spiked analytes in the LCS, Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are compared to these acceptance limits. Katahdin standard operating procedure is to take corrective action only if the number of spiked analytes in the LCS that are outside of the QC limits is greater than the DoD QSM allowable number of exceedances. If the associated MS/MSD has greater than the allowable number of exceedances, no corrective action is taken, as long as the LCS is acceptable.

There were no other protocol deviations or observations noted by the organics laboratory staff.

Wet Chemistry Analysis

The samples of Work Order SQ6133 were analyzed in accordance with the specific methods listed on the Report of Analysis.

Analyses for hexavalent chromium were performed according to Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), V (2015) and VI (2019).

Analyses for alkalinity, ferrous iron, and total organic carbon were performed according to "Standard Methods for the Examination of Water and Wastewater", 15th, 16th, 17th, 18th, 19th, and 20th editions, 1980, 1985, 1989, 1992, 1995, 1999. APHA-AWWA-WPCF.

Analyses for chloride, nitrate, and sulfate were performed according to "Methods for the Determination of Inorganic Substances in Environmental Samples", EPA 600/R-93/100, August 1993.

All Wet Chemistry results were evaluated to Katahdin Analytical Services' Method Detection Limits (MDL). Measured concentrations that fall between the MDL and Katahdin's Limit of Quantitation (LOQ) are flagged "J". Measured concentrations that are below the MDL are flagged "U" and reported as "U LOD", where "LOD" is the numerical value of the Limit of Detection.

All analyses were performed within analytical holding times. All quality control criteria were met with the following exceptions:

The nitrate matrix spike (WG345141-4) and matrix spike duplicate (WG345141-5) on sample SQ6133-3 both had low recoveries that were outside of the acceptance limits.

The sulfate matrix spike (WG345141-4) on sample SQ6133-3 had a low recovery that was outside of the acceptance limits.

Copies of all relevant standard receipt and preparation logbook pages are included in the report with the exception of the page containing the receipt information for Katahdin Standard SWL2104 used in the ferrous iron analysis. This page was unable to be located, but a scan of the "certificate of actual lot analysis" that is printed on the reagent bottle was included in the report.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Quality Assurance Officer, or their designee, as verified by the following signature.

01/03/2024

Jennifer Prescott
Quality Assurance Officer

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Katahdin Analytical Services, LLC. **Sample Receipt Condition Report**

Client: Credere	KAS PM: HHM	Sampled By: Client	
Project:	KIMS Entry By: JCB	Delivered By: UniShip	
KAS Work Order#: SQ 6133	KIMS Review By: HHM	Received By: EP	
	Labeled By: EP		
SDG #:	Cooler: 2 of 3	Date/Time Rec.: 11-8-23 0950	

Receipt Criteria	Y	N	EX*	NA	Comments and/or Resolution
1. Custody seals present / intact?	/				
2. Chain of Custody present in cooler?	/				
3. Chain of Custody signed by client?	/				
4. Chain of Custody matches samples?			x		PO 1
5. Temperature Blanks present? If not, take temperature of any sample w/ IR gun.	/				Temp (°C): 2.3 — Thermometer ID: IR-1
Samples received at <6 °C w/o freezing?	/				Note: Not required for metals (except Hg soil) analysis.
Ice packs or ice present?	/				The lack of ice or ice packs (i.e. no attempt to begin cooling process) or insufficient ice may not meet certain regulatory requirements and may invalidate certain data.
If yes, was there sufficient ice to meet temperature requirements?	/				
If temp. out, has the cooling process begun (i.e. ice or packs present) and sample collection times <6hrs., but samples are not yet cool?				/	Note: No cooling process required for metals (except Hg soil) analysis.
6. Volatiles:					
Aqueous: No bubble larger than a pea?				/	
Soil/Sediment:					
Received in airtight container?				/	
Received in methanol?				/	
Methanol covering soil?				/	
D.I. Water - Received within 48 hour HT?				/	
7. Trip Blank present in cooler?				/	
8. Proper sample containers and volume?	/				
9. Samples within hold time upon receipt?	/				
10. Aqueous samples properly preserved? Metals, COD, NH3, TKN, O/G, phenol, TPO4, N+N, TOC, DRO, TPH – pH <2	/				
Sulfide - >9				/	
Cyanide – pH >12				/	
11. Bottleware Prepped on:					

* Log-In Notes to Exceptions: document any problems with samples or discrepancies or pH adjustments.

SAMPLE DATA SUMMARY PACKAGE

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 Please refer to cover letter or narrative for further information.

H_ Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

QC Flag Legend

T - Target compound detected outside RT window.
a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount
exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount
exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.
