QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

And/or

J Used for Dual Column analytes when there is a greater than 40% difference for detected concentrations between the two GC/HPLC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

I Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration (ICAL).

D Indicates that the flagged compound did not meet DoD criteria in the corresponding Initial Calibration Verification (ICV).

C Indicates that the flagged compound did not meet DoD criteria in the corresponding opening Calibration Verification (CV).

V Indicates that the flagged compound did not meet DoD criteria in the corresponding closing Calibration Verification (CV).

L/LL Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M/MM Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike (MS) and/or Matrix Spike Duplicate MSD) prepared and/or analyzed concurrently with the native sample.

H Indicates the flagged compound was detected on the primary column but was not detected on the confirmation column therefore the compound is not reported as a positive detection. (SW846 8330A/B only)

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client. Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 Please refer to cover letter or narrative for further information.

H_ Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit	NOD	No Odor Detected
NFL	No Free Liquid Present	FLP	Free Liquid Present	TON	Threshold Odor Number

D-1 As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

D-4 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

D-5 The seed control factor did not meet the method criteria of greater than 2.0 mg/L of dissolved oxygen (DO) uptake over the five day period of incubation. The dilution closest to meeting the criteria was used to estimate the seed control factor.

KATAHDIN ANALYTICAL SERVICES, LLC
Wet Chemistry Analysis Run Information Sheet

Analyte: HEXAVALENT CHROMIUM	**Analyst:** SS
Instrument: KONELAB 20	**Analysis Date:** 11/10/23

Analytical Method (Check all that apply): W6345317 → R626956

☑ SW846 7196A ☐ SM 3500-Cr B ☐ Other (list): _____

Reagent Information:

Reagent Name	Reagent ID	Expiration Date
Diphenylcarbazide Solution	**W22305**	**5/7/2024**
10% v/v Sulfuric Acid	**W21629**	**2/14/2024**

Standards Information:

Standard Name	Concentration (mg/L as Cr^6)	ID	Expiration Date
Cal. Standard / CCV Stock	1000.0	**SWL5065**	**4/28/2024**
Cal. Std. / CCV Intermediate	25.0	**W21820**	**11/28/2023**
1.0 mg/L Calibration Standard - (1.00 mL / 25.0 mL dilution of Cal. Standard / CCV Intermediate)	1.00	HC_Cal111023	Day of use only
CCV - (0.50 mL / 25.0 mL dilution of Cal. Standard / CCV Intermediate)	0.50	HC_CCV111023	Day of use only
LCS / MS Stock	1000.0	**SWL5048**	**12/31/2023**
LCS / MS Intermediate	25.0	**W21961**	**12/20/2023**
LCS - (0.50 mL / 25.0 mL dilution of LCS / MS Intermediate)	0.50	HC_LCS111023	Day of use only

Notes:

1) Additional calibration standards (0.50, 0.10, 0.050, 0.020, 0.010 mg/L) are automatically prepared by the instrument during analysis through dilution of the 1.0 mg/L Calibration Standard.
2) Matrix spikes are prepared prior to analysis by adding 0.5 mL of LCS / MS Intermediate to 25 mL of sample. Matrix spike added = 0.50 mg/L as Cr6.

KATAHDIN ANALYTICAL SERVICES, LLC
CARBON ANALYSIS RUN INFORMATION SHEET

INSTR. ID: analytikjena multi N/C **ANALYST:** CJB **DATE:** 12-06-23

FILE NAME: 120623 **METHOD(S):**

TOC	DOC	TIC
• EPA 415.1	• EPA 415.1	• EPA 415.1
• SM5310B	• SM5310B	• SM5310B
• SW9060	• SW9060	• SW9060

CALIBRATION DATE: 08/24/23 **CALIBRATION ANALYST:** CJB

Calibration standards were prepared by performing dilutions of the following standard on the day of calibration:

Calibration Source Standard ID	Prep Date	~~Expiration Date~~ ~~A~~	Standard Conc. (mg/L)
W22102	08/24/23	~~11/24/23~~	1000

~~A~~ No longer applicable due to procedure updates RAD 12/7/23

Note: Calibration must be performed quarterly or whenever a change in analysis conditions warrant. A copy of the associated calibration data is attached to this run.

STANDARDS USED:

Standard Name	Standard ID	Prep Date	Expiration Date	Standard Conc.
CCV #	W22343	11/16/23	2/16/24	1000 mg C/L
LCS	W22391	12/06/23	03/06/24	50 mg C/L
MS Stock Std. *	W22343	11/16/23	2/16/24	1000 mg C/L
Alkalinity Check	W22285	11/02/23	02/02/24	15 mg/L (Inorg. C)

CCV prepared by adding 4.0 mL of CCV Std. to 36 mL of DI.
* Matrix spikes are prepared by adding 2.0 mL of MS Stock Std. to 38 mL of sample.

Additional Comments and Notes:

SUBJECT: D01ME0004-07, Dow Military Airfield, Salvage Yard - Data Validation

Dear Ms. Drouin,

Enclosed are the final validation reports for the fractions listed below. These SDGs were received on March 31, 2022. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #56396_RV1:

SDG #	Fraction
SQ0595/410-114770-1	Polynuclear Aromatic Hydrocarbons, Wet Chemistry, Extractable Petroleum Hydrocarbons, Volatile Petroleum Hydrocarbons,
64446	Polychlorinated Biphenyls, Volatiles, Semivolatile, Total Organic Carbon, Chromium, Hexavalent

The data validation was performed under Stage 2A guidelines. The analyses were validated using the following document, as applicable to each method:

- Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014; update VI, July 2018

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng
pgeng@lab-data.com
Project Manager/Senior Chemist

Data Validation Report for SQ0595

Facility:	D01ME0004-07, Dow Military Airfield, Salvage Yard
Event:	Dow SY RI 2023, Solids
SDG:	SQ0595
Guidance Document:	Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022
Prime Contractor:	Credere Associates, LLC, Westbrook, ME
Project Manager:	Peter Thompson
Contract Laboratory(ies):	Katahdin Analytical Services, Scarborough, ME
Data Review Contractor:	Laboratory Data Consultants, Inc.
Data Review Level:	S2AVEM
Primary Data Reviewer:	Long Ngo, Environmental Scientist
Second Reviewer:	Pei Geng, Senior Scientist
Date Submitted:	April 14, 2023

Field Sample ID	Lab Sample ID	Matrix	Type/Type Code	BNASIM	SW7196A
SY-SB4R-1	SQ0595-1	Soil	Field Sample/N	X	X
SY-SB4R-10	SQ0595-2	Soil	Field Duplicate/FD	X	X
SY-SB4R-2	SQ0595-3	Soil	Field Sample/N	X	X

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) SQ0595. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 3 results (5.56%) out of the 54 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.
SW7196A	No additional comments; see Checklist for detail.

Reviewed by Long Ngo, Environmental Scientist, Laboratory Data Consultants, Inc.

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Pei Geng, Senior Scientist, Laboratory Data Consultants, Inc.

August 07, 2023

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW7196A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-SB4R-1 (N)		42.2	< 28	< 56	days	J/UJ	H1	Test Exceeds UWL
SY-SB4R-10 (FD)		42.2	< 28	< 56	days	J/UJ	H1	Test Exceeds UWL
SY-SB4R-2 (N)		42.2	< 28	< 56	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for SW7196A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 SQ0595-1	N	Hexavalent Chromium	0.56	0.26 J	0.26 J	-	mg/kg	H1/TR
SY-SB4R-10 SQ0595-2	FD	Hexavalent Chromium	0.55	0.33 U	0.33 UJ		mg/kg	H1
SY-SB4R-2 SQ0595-3	N	Hexavalent Chromium	0.57	0.32 J	0.32 J	-	mg/kg	H1/TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: SW7196A		Extraction Method: SW3060A						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 SQ0595-1	N	Hexavalent Chromium	0.56	0.26 J	0.26 J	-	mg/kg	H1/TR
SY-SB4R-10 SQ0595-2	FD	Hexavalent Chromium	0.55	0.33 U	0.33 UJ		mg/kg	H1
SY-SB4R-2 SQ0595-3	N	Hexavalent Chromium	0.57	0.32 J	0.32 J	-	mg/kg	H1/TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Results with Modified Qualifiers

No qualifiers associated with this sample delivery group were modified manually.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		
Were there discrepancies between the COC and the sample labels?		•		
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?	•			
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Not applicable to this method.
Were field blanks analyzed at the proper frequency and in control?			•	Not applicable to this method.
Were equipment blanks analyzed at the proper frequency and in control?			•	Not applicable to this method.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?				
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			No MS/MSD was requested on the COC and no MS/MSD was performed with the batch. LCS/LCSD was performed and was reviewed to be in control
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	Not applicable to this method.
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•

Data Validation Report for 410-114770-1_FUDSChem

Facility:	D01ME0004-07, Dow Military Airfield, Salvage Yard
Event:	Dow SY RI 2023, Solids
SDG:	410-114770-1_FUDSChem
Guidance Document:	Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022
Prime Contractor:	Credere Associates, LLC, Westbrook, ME
Project Manager:	Peter Thompson
Contract Laboratory(ies):	Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA
Data Review Contractor:	Laboratory Data Consultants, Inc.
Data Review Level:	S2AVEM
Primary Data Reviewer:	Long Ngo, Environmental Scientist
Second Reviewer:	Pei Geng, Senior Scientist
Date Submitted:	April 14, 2023

Field Sample ID	Lab Sample ID	Matrix	Type/Type Code	LYDKHN
SY-SB4R-1	410-114770-1	Soil	Field Sample/N	X
SY-SB4R-10	410-114770-2	Soil	Field Duplicate/FD	X
SY-SB4R-2	410-114770-3	Soil	Field Sample/N	X

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-114770-1_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 3 results (100.00%) out of the 3 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method LYDKHN, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-SB4R-10 (N)	Total Organic Carbon	191	< 350	< 350	mg/kg	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method LYDKHN, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LCS 410-344728/3 (BS)	Total Organic Carbon	122	80 - 120	40 - 120	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for LYDKHN

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 410-114770-1	N	Total Organic Carbon	350	35000	35000 J	+	mg/kg	C
SY-SB4R-10 410-114770-2	FD	Total Organic Carbon	350	810	810 J	+	mg/kg	C
SY-SB4R-2 410-114770-3	N	Total Organic Carbon	370	1700	1700 J	+	mg/kg	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: LYDKHN		Extraction Method: NONE						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 410-114770-1	N	Total Organic Carbon	350	35000	35000 J	+	mg/kg	C
SY-SB4R-10 410-114770-2	FD	Total Organic Carbon	350	810	810 J	+	mg/kg	C
SY-SB4R-2 410-114770-3	N	Total Organic Carbon	370	1700	1700 J	+	mg/kg	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method LYDKHN

FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	Modified Result	Reason
SY-SB4R-1 410-114770-1	N	Total Organic Carbon	350	35000	35000 J	35000 J	C
SY-SB4R-10 410-114770-2	FD	Total Organic Carbon	350	810	810 J	810 J	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D3	Field Duplicate RPD

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Absolute Resource Associates, LLC, Portsmouth, NH and were reported under sample delivery group (SDG) 64446. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 64 results (10.13%) out of the 632 results (sample and field QC samples) reported are qualified based on review and 4 results (0.63%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method MADEPEP, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
15928PB15928 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	4.86	< 4	< 20	ug/g	U/None*	L	
15928PB15928 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic (Unadjusted)	4.86	< 4	< 20	ug/g	U/None*	L	
15928PB15928 (LB)	C19-C36 Extractable Petroleum Hydrocarbons, Aliphatic	3.83	< 2.1	< 20	ug/g	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for MADEPEP

SY-SB4R-2 64446-003	N	Silver	2.7	0.14 J	2.7 U		ug/g	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020A, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
15957CRMD 15957 (BD)	Aluminum	28.9	< 20	< 20	rpd	J/None	Z	
15957CRMD 15957 (BD)	Iron	29.4	< 20	< 20	rpd	J/None	Z	
15957CRMD 15957 (BD)	Potassium	20.0	< 20	< 20	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS RPD for SW6020A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason

SY-SB4R-2 64446-003	N	Iron	27	29000	29000 J		ug/g	Z

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-SB4R-1 (MS)	Aluminum	-82.0	78 - 124	30 - 125	percent	J/X	M	Spike amount Insignificant
SY-SB4R-1 (SD)	Aluminum	5.00	78 - 124	30 - 125	percent	J/X	M	Spike amount Insignificant
SY-SB4R-1 (MS)	Iron	-268	81 - 124	30 - 125	percent	J/X	M	Spike amount Insignificant
SY-SB4R-1 (SD)	Iron	-1060	81 - 124	30 - 125	percent	J/X	M	Spike amount Insignificant
SY-SB4R-1 (MS)	Magnesium	-172	80 - 123	30 - 125	percent	J/X	M	Spike amount Insignificant
SY-SB4R-1 (SD)	Magnesium	71.0	80 - 123	30 - 125	percent	J/UJ	M	Spike amount Insignificant
SY-SB4R-1 (MS)	Manganese	117	85 - 116	30 - 125	percent	J/None	M	
SY-SB4R-1 (MS)	Potassium	82.0	85 - 119	30 - 125	percent	J/UJ	M	
SY-SB4R-1 (MS)	Selenium	75.0	80 - 119	30 - 125	percent	J/UJ	M	
SY-SB4R-1 (MS)	Zinc	76.0	82 - 119	30 - 125	percent	J/UJ	M	
SY-SB4R-1 (SD)	Zinc	77.0	82 - 119	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW6020A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 64446-001	N	Manganese	5.2	400 M	400 J	+	ug/g	M

SY-SB4R-1 64446-001	N	Zinc	5.2	47 M	47 J	-	ug/g	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020A, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-SB4R-1 (SD)	Antimony	21.1	< 20	< 20	rpd	J/None	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for SW6020A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 64446-001	N	Antimony	0.52	0.44 JM	0.44 J		ug/g	D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7471B, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
15941CRM 15941 (BS)	Mercury	69.0	80 - 124	40 - 124	percent	J/UJ	C	
15941CRMD 15941 (BD)	Mercury	69.0	80 - 124	40 - 124	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW7471B

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 64446-001	N	Mercury	0.14	0.077 U	0.077 UJ		ug/g	C
SY-SB4R-10 64446-002	FD	Mercury	0.16	0.091 U	0.091 UJ		ug/g	C
SY-SB4R-2 64446-003	N	Mercury	0.15	0.083 U	0.083 UJ		ug/g	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
15933MB15933 (LB)	Naphthalene	0.0257	< 0.016	< 0.1	ug/g	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-SB4R-1 64446-001	N	Naphthalene	0.11	0.080 J	0.11 U		ug/g	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D	MS RPD
L	Lab Blank
M	MS Recovery
T	Trip Blank
TR	Trace Level Detect
Z	LCS RPD

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias	
-	The result may be biased low
+	The result may be biased high
Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result	

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		
Were there discrepancies between the COC and the sample labels?		•		
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?	•			
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Several results qualified U at the LOQ due to method blank contamination.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	Not applicable to this method.
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		Data acceptable as reported and qualified.

QA objectives for measuring data are expressed in terms of precision, accuracy, representativeness, comparability, completeness, and sensitivity (PARCCS). The QA objectives provide a mechanism for ongoing control and evaluating and measuring data quality throughout the project.

A review of the collected data is necessary in order to identify if data measurement objectives established in the seven-step data quality objective (DQO) process have been met. In general, the following data measurement objectives were considered:

•Specification of particular analytical method and reporting detection limit requirements
•Identification of the appropriate laboratory analytical QC requirements
•Verify if appropriate levels of other PARCCS criteria for the data has been met
•Delineation of specific sample-handling issues or other project-specific issues

The data validation review of the QA objectives verifies if the collected data are of sufficient quality to support their intended use.

A total of 4 results (0.58 %) out of the 689 results (sample and field QC samples) reported have had qualifiers modified during this Data Usability Assessment and 4 results (0.58 %) have been rejected or deemed a serious deficiency. 70 results were qualified during the data review process. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count.

Data Usability Summary

Narrative Comments

Review Questions	Yes	No	NA	Comment
Review Objective/Sampling Design				
Is the Final UFP QAPP associated with the event present in the Planning folder of the FUDSChem library for the project?	•			Loaded to FUDSChem as "Dow_SalvageYard_QAPP_FINAL_9-18-2019_W912WJ-18-C0019, Credere Associates, LLC, 2019-09-18"
Were key outputs defined during systematic planning (e.g.,PQOs or DQOs and MPCs) reviewed to make sure they are still applicable? Refer to the UFP QAPP for the projects, and to the worksheets found in REPORTS | UFP QAPP Worksheets.	•			
Refer to summary reports found in REPORTS | Event Tracking Reports | Event Status: All Data Types, Event Status: Chemistry Detail, and Unplanned Samples to review planned and unplanned samples and test methods.	•			All locations planned to be sampled have associated data and are highlighted green. Unplanned samples lists only trip blanks.
Was the sampling design reviewed for consistency with stated objectives? Refer to MAPS | Export to Google Earth to review sampling locations.	•			
Were data quality indicators (DQIs) from the DoD QSM used for this event? Review and discuss any DQIs that deviated from the DoD QSM. Refer to the UFP QAPP and to REPORTS | Environmental Setup Reports | Analyte Criteria, which highlights items that were modified from the original templates based on the DoD QSM.	•			All method were completed under QSM.
Review Data				
If Event Planning was performed in FUDSChem, were all samples and measurements identified in REPORTS | Event Tracking Reports | Event Status: All Data Types completed and approved (all checked cells are green)?	•			Yes, there is discrepency between the SB4R and OBMW4R LTD loading; however, these are the same location/boring.
If Event Planning was performed in FUDSChem, were all samples identified in REPORTS | Event Tracking Reports | Event Status: Chemistry Detail collected and approved (all checked cells are green), or notated to explain discrepancies?	•			All are green
If Event Planning was performed in FUDSChem, were all samples identified in REPORTS | Event Tracking Reports | Unplanned Samples reviewed to ensure correct completeness calculations?	•			Only one trip blank listed
Were deviations from planned activities (e.g., number and locations of samples, holding time exceedances, damaged samples, non-compliant PT sample results, and SOP deviations) reviewed to determine their impacts on the data usability? If Event Planning was performed in FUDSChem, refer to REPORTS | Data Usability Assessment Reports | Project Completeness.	•			Field completeness is 100% . Analytical completeness is 99.3%; therefore, the overall completeness meets the goal of 95%.
Have all Location related placeholders, such as centroid coordinates, been resolved? Review REPORTS | Data Assessment Reports | Locations.	•			
Were laboratory and data review reports for each Sample Delivery Group (SDG) associated with the event present in the FUDSChem library for the project? Refer to the list of SDGs listed on the cover page of the Data Usability Assessment Summary Report found under REPORTS | Data Usability Assessment Reports.	•			

Data Usability Summary

Review Questions	Yes	No	NA	Comment
Review Data				
Were all data review reports reviewed? Look for patterns, trends, and anomalies (e.g., unexpected results). Refer to the Data Review Reports in the project library as well as the event summary reports located in REPORTS | Data Usability Assessment Reports.	•			• Hexavalent chromium was analyzed outside the hold time due to hood failure at the laboratory and inability to safely extract the samples. These results have been qualified as estimated. Based on results generally consistent with other nearby locations (SY-SB4), these qualifications do not impact the usability of these results. • Detections in various blank samples (mainly method blanks) resulted in qualification of associated sample results as 'U' at the limit of quantification (LOQ) or as estimated concentrations with a potential false positive (J). Qualifications were review and applied only to MNA parameters or VOC analytes with no project action limits (PALs), and where PALs were available, the LOQ or detected concentrations sufficiently met/were below the sensitivity goals. As this qualification was applied to trace concentrations, the usability of the data is not considered impacted. • Surrogate, LCS/LCSD, and MS/MSD recovery nonconformances resulted in qualifications of associated results as estimated with bias (J or UJ). Estimated results' impact on the usability of the data was evaluated by comparing the estimated result to the associated PAL. Generally, estimated results were either below or exceeding the PAL and were not in proximity to the respective PAL value. Therefore, these qualifications do not affect the usability of the results relative to the objectives.
Were all data review reports associated with an approved eQAPP? Review the footer of the Data Review report in the Library to identify the version of the eQAPP that was used.	•			eQAPP_USNAE-D01ME0004-07-RIFS.106740
Were there any implications of unacceptable QC sample results and does this impact sample results? If so, did any qualifiers require revision using the Sample Qualification tab of this interface?	•			Some X qualifiers were changed to R.
Were sensitivity requirements met, as compared to regulatory Project Action or Screening Limits? Review REPORTS | Data Usability Assessment Reports | Sensitivity Summary.		•		Benzo(a)anthracene did not meet the PAL goal for the three samples; however, these were anticipated in the QAPP and are already analyzed by SIM.
Were any sample results recommended for rejection during validation (X qualified)? If so, have all X qualifiers been revised to R or J using the Sample Qualification tab of this interface?	•			Several X qualifiers were changed to R.
Were all LTM related parameters required for the project, such as groundwater measurements, environmental parameters, and well screen intervals found to be complete and correctly reported?	•			
Have all sections of the Dashboard linked Project Tracking Report been documented as complete?	•			LTD pending final clarification
Document Usability/Draw Conclusions				
Based on the previous 'Review Data' documentation, are there any limitations on the use of the data associated with this event?		•		

Data Usability Summary

Review Questions	Yes	No	NA	Comment
Document Usability/Draw Conclusions				
Describe the conclusions reached during this Data Usability Assessment.	•			Considering the results of this report, the data collected as part of the SY-SB4R soil sampling event are usable for making project decisions relative to the established objectives
Lessons Learned/Recommendations				
Were any Program level Lessons Learned identified? (e.g., SW8330 was not the best fit for this site and MS/MS should be considered)		•		
Were any Project level Lessons Learned identified? (e.g., ISM sampling resulted in anomalies to be resolved in the future, or current locations not comparable to historical data)		•		
Are there any additional items associated with this sampling event that need clarification?	•			SY-SB4R (boring) and SY-OBMW4R (final installed well) are the same location
Were any Sample level Lessons Learned identified? (e.g., a particular well may be expected to be dry in the future)		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Absolute Resource Associates, LLC, Portsmouth, NH and were reported under sample delivery group (SDG) 67797. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 36 results (7.29%) out of the 494 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
MADEPEP	The laboratory case narrative indicates the following: "The LCS/D17110 did not meet the acceptance criteria for naphthalene, 2-methylnaphthalene, indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, and C9-C18 Aliphatics. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17110 was outside the acceptance criteria for C19-C36 Aliphatics. No additional sample volume remains for re-analysis. The results have been qualified accordingly." Sample results were qualified accordingly during data validation.
MADEPVP	No additional comments; see Checklist for detail.
SW6020A	This includes both total and dissolved 6020A results.
SW7470A	This includes both total and dissolved 7470A results.
SW8082A	No additional comments; see Checklist for detail.
SW8260D	The laboratory case narrative indicates the following: "The LCS2303694 did not meet the acceptance criteria for carbon disulfide and t-butanol (TBA). These compounds showed high recoveries. The relative percent difference between the LCS and LCSD2303694 was outside the acceptance criteria for t-butanol (TBA) and 1,1,2-trichloroethane. There is no impact to the data as these analytes were not detected in the associated samples." The associated results were non-detect so sample qualification was not warranted.
SW8270E	The laboratory case narrative indicates the following: "The LCS/D17096 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17096 was outside the acceptance criteria for several compounds. No additional sample volume remains for re-analysis. The results have been qualified accordingly." Sample results were qualified accordingly during data validation.

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method MADEPEP, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17110LCS17110 (BS)	2-Methylnaphthalene	36.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCS17110 (BS)	C9-C18 Extractable Petroleum Hydrocarbons, Aliphatic	36.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCS17110 (BS)	Dibenz (a,h)anthracene	39.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCS17110 (BS)	Indeno(1,2,3-c,d)pyrene	39.0	40 - 140	20 - 140	percent	J/UJ	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPEP, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17110LCSD17110 (BD)	C19-C36 Extractable Petroleum Hydrocarbons, Aliphatic	28.5	< 25	< 25	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method MADEPVP, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303773BLK111623A (LB)	Ethylbenzene	0.410	< 0.404	< 2	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270E, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17096LCSD17096 (BD)	2,4,5-Trichlorophenol	25.6	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2,4,6-Trichlorophenol	24.9	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2,4-Dichlorophenol	36.3	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2,4-Dinitrophenol	30.9	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2-Chlorophenol	43.4	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2-Methylphenol (o-Cresol)	36.9	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2-Nitrophenol	23.4	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	4-Chloro-3-methylphenol	42.2	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	4-Methylphenol (p-Cresol)	41.3	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	4-Nitrophenol	34.7	< 20	< 20	rpd	J/None	Z

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method SW8270E

FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	ADR Reason	Modified Result	Reason
SY-OBMW10-110623 67797-002	N	Hexachloroethane	2.0	1.0 U#	1.0 X	C	1.0 UJ	C
SY-OBMW7-110623 67797-001	N	Hexachloroethane	2.0	1.0 U#	1.0 X	C	1.0 UJ	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
L	Lab Blank
T	Trip Blank
TR	Trace Level Detect
Z	LCS RPD

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this analysis.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to low LCS/LCSD %R, several non-detect results were qualified as estimated (UJ).
Was the LCS/LCSD RPD within project acceptance limits?		•		Although the LCS/LCSD RPD was high, the associated results were non-detect so sample qualification was not required.
Was a MS/MSD pair prepared with each batch?			•	MS/MSD was not performed on a sample from this SDG, but a project sample from another SDG was used in some batches.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD was not performed on a sample from this SDG, but a project sample from another SDG was used in some batches.
Was the MS/MSD RPD within project acceptance limits?			•	MS/MSD was not performed on a sample from this SDG, but a project sample from another SDG was used in some batches.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field replicates were not collected in this SDG.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))				
Review Questions	Yes	No	NA	Comment
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

Review Questions

Method: MADEPVP (Method for the Determination of Volatile Petroleum Hydrocarbons (VPH))				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.

Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All results are acceptable as reported.

Review Questions

Method: SW7470A (Mercury in Water (Manual Cold-Vapor Technique))

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	MS/MSD was not performed on a sample from this SDG, but a project sample from another SDG was used in some batches.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD was not performed on a sample from this SDG, but a project sample from another SDG was used in some batches.
Was the MS/MSD RPD within project acceptance limits?			•	MS/MSD was not performed on a sample from this SDG, but a project sample from another SDG was used in some batches.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field replicates were not collected in this SDG.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Absolute Resource Associates, LLC, Portsmouth, NH and were reported under sample delivery group (SDG) 67798. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 210 results (9.66%) out of the 2173 results (sample and field QC samples) reported are qualified based on review and 7 results (0.32%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
MADEPEP	The laboratory case narrative indicates the following: "Samples 67798-007 through -010 did not meet acceptance criteria for the extraction surrogate 1-chlorooctadecane. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The sample results were qualified accordingly during data validation. "The LCS/D17110 did not meet the acceptance criteria for naphthalene, 2-methylnaphthalene, indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, and C9-C18 Aliphatics. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17110 was outside the acceptance criteria for C19-C36 Aliphatics. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The sample results were qualified accordingly during data validation. "The matrix spike/duplicate for 67798-001 and -007 did not meet the acceptance criteria for naphthalene, 2-methylnaphthalene, acenaphthylene, and C19-C36 Aliphatics. These compounds showed low recoveries. Similar recoveries were observed in the associated LCS/D. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The sample results were qualified accordingly during data validation.
MADEPVP	The laboratory case narrative indicates the following: "The matrix spike/duplicate for 67798-001 and -007 did not meet the acceptance criteria for Unadjusted C9-C12 Aliphatics, C5-C8 Aliphatics, C9-C12 Aliphatics, and C9-C10 Aromatics. The associated LCS/D met the method acceptance criteria. Compounds that exhibited recoveries outside the acceptance criteria have been qualified with an "M." Matrix interference suspected." The associated sample results were non-detect so sample qualification was not warranted.
SW6020A	This includes both total and dissolved 6020A results. The laboratory case narrative indicates the following: "The matrix spike for 67798-007 and -012 did not meet the acceptance criteria for Potassium. The percent recovery was acceptable in the associated LCS/D. The recovery for the PDS for is provided with the results. Matrix interference suspected. Sample results have been qualified accordingly. Magnesium was not able to be evaluated as the native sample concentration is greater than 4 times the spike concentration." The sample results were qualified accordingly during data validation.
SW7470A	This includes both total and dissolved 7470A results.
SW8082A	The laboratory case narrative indicates the following: "The sample extract for 67798-003 (SY-OBMW4R-110723) PCB analysis was spilled during the final stages of sample concentration losing an unknown amount. No additional sample volume remains for re-analysis. The results have been reported, but based on the extremely low surrogate recoveries, a significant portion of the extract was lost during the spill." Due to loss of sample and the low surrogate recoveries, the PCB results for this sample were recommended for exclusion (X).

SW8260D	The laboratory case narrative indicates the following: "The LCS2303675 did not meet the acceptance criteria for t-butanol (TBA), 1,4-dioxane, and 1,2,3-trichloropropane. The LCS2303675 did not meet the acceptance criteria for chloroethane, diethyl ether, t-butanol (TBA), toluene, 1,3-dichloropropane, and 1,2,3-trichloropropane. These compounds showed high recoveries. There is no impact to the data as these analytes were not detected in the associated samples." The sample results were qualified accordingly during data validation. "The matrix spike/duplicate for 67798-001 and -007 did not meet the acceptance criteria for several compounds. The associated LCS/D met the method acceptance criteria. Compounds that exhibited recoveries outside the acceptance criteria have been qualified with an "M." Matrix interference suspected." The sample results were qualified accordingly during data validation.
SW8270E	The laboratory case narrative indicates the following: "The LCS/D17096 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17096 was outside the acceptance criteria for several compounds. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The results were qualified accordingly during data validation. "The matrix spike/duplicate for 67798-001 and -007 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. Similar recoveries were observed in the associated LCS/D. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The results were qualified accordingly during data validation.

Reviewed by Christina Ashdown, Senior Chemist, EnSafe, Inc.

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Kevin Kha

Reviewed by Kevin Kha, Environmental Scientist, EnSafe, Inc. February 14, 2024

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method MADEPEP, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17110LCS17110 (BS)	2-Methylnaphthalene	36.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCS17110 (BS)	C9-C18 Extractable Petroleum Hydrocarbons, Aliphatic	36.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCS17110 (BS)	Dibenz (a,h)anthracene	39.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCS17110 (BS)	Indeno(1,2,3-c,d)pyrene	39.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCS17110 (BS)	Naphthalene	32.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCSD17110 (BD)	2-Methylnaphthalene	36.0	40 - 140	20 - 140	percent	J/UJ	C	
17110LCSD17110 (BD)	Naphthalene	34.0	40 - 140	20 - 140	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPEP, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17110LCSD17110 (BD)	C19-C36 Extractable Petroleum Hydrocarbons, Aliphatic	28.5	< 25	< 25	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS RPD for MADEPEP

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW14-110723 67798-009	N	C19-C36 Extractable Petroleum Hydrocarbons, Aliphatic	100	120	120 J	-	ug/l	I/Z

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPEP, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPVP, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303773BLK111623A (LB)	Ethylbenzene	0.410	< 0.404	< 2	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for MADEPVP

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW13-110723 67798-008	N	Ethylbenzene	2.0	0.46 J	2.0 U		ug/l	L
SY-OBMW6-110723 67798-002	N	Ethylbenzene	2.0	0.46 J	2.0 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPVP, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-OBMW4R-110723 (N)	2,4,5,6-Tetrachloro-meta-xylene	3.00	30 - 150	10 - 150	percent	J/X	I	
SY-OBMW4R-110723 (N)	Decachlorobiphenyl	3.00	30 - 150	10 - 150	percent	J/X	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8082A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW4R-110723 67798-003	N	PCB-1016 (Aroclor 1016)	0.10	0.062 U	0.062 X		ug/l	I/P2
SY-OBMW4R-110723 67798-003	N	PCB-1221 (Aroclor 1221)	0.10	0.062 U	0.062 X		ug/l	I/P2
SY-OBMW4R-110723 67798-003	N	PCB-1232 (Aroclor 1232)	0.10	0.062 U	0.062 X		ug/l	I/P2
SY-OBMW4R-110723 67798-003	N	PCB-1242 (Aroclor 1242)	0.10	0.062 U	0.062 X		ug/l	I/P2
SY-OBMW4R-110723 67798-003	N	PCB-1248 (Aroclor 1248)	0.10	0.062 U	0.062 X		ug/l	I/P2
SY-OBMW4R-110723 67798-003	N	PCB-1254 (Aroclor 1254)	0.10	0.062 U	0.062 X		ug/l	I/P2
SY-OBMW4R-110723 67798-003	N	PCB-1260 (Aroclor 1260)	0.10	0.062 U	0.062 X		ug/l	I/P2

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303675BLK111023G (LB)	Carbon disulfide	0.363	< 0.333713	< 2	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW5-110723 67798-006	N	Carbon disulfide	2.0	0.39 J	2.0 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303675LCS111023G (BS)	1,2,3-Trichloropropane	124	73 - 122	20 - 122	percent	J/None	C	
2303675LCS111023G (BS)	1,4-Dioxane	144	59 - 139	20 - 139	percent	J/None	C	
2303675LCS111023G (BS)	tert-Butyl alcohol	130	68 - 129	20 - 129	percent	J/None	C	
2303675LCSD111023G (BD)	1,2,3-Trichloropropane	129	73 - 122	20 - 122	percent	J/None	C	
2303675LCSD111023G (BD)	1,3-Dichloropropane	121	80 - 119	20 - 119	percent	J/None	C	
2303675LCSD111023G (BD)	Carbon disulfide	146	64 - 133	20 - 133	percent	J/None	C	
2303675LCSD111023G (BD)	Chloroethane	150	60 - 138	20 - 138	percent	J/None	C	
2303675LCSD111023G (BD)	Diethyl ether (Ethyl ether)	131	68 - 129	20 - 129	percent	J/None	C	
2303675LCSD111023G (BD)	tert-Butyl alcohol	134	68 - 129	20 - 129	percent	J/None	C	
2303675LCSD111023G (BD)	Toluene	122	80 - 121	20 - 121	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW2-252.5-262.5-110723 67798-010	N	Toluene	2.0	1.3 J	1.3 J	+	ug/l	C/TR
SY-BRMW2-60.5-70.5-110723 67798-004	N	Toluene	2.0	6.3	6.3 J	+	ug/l	C
SY-BRMW2-80.5-95.5-110723 67798-007	N	Toluene	2.0	1.8 J	1.8 J	+	ug/l	C/M/TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW2-80.5-95.5-110723 (MS)	1,3-Dichloropropane	120	80 - 119	20 - 119	percent	J/None	M	
SY-BRMW2-80.5-95.5-110723 (MS)	1,4-Dioxane	140	59 - 139	20 - 139	percent	J/None	M	
SY-BRMW2-80.5-95.5-110723 (MS)	Carbon disulfide	143	64 - 133	20 - 133	percent	J/None	M	
SY-BRMW2-80.5-95.5-110723 (SD)	Carbon disulfide	145	64 - 133	20 - 133	percent	J/None	M	
SY-BRMW2-80.5-95.5-110723 (MS)	Chloroethane	148	60 - 138	20 - 138	percent	J/None	M	
SY-BRMW2-80.5-95.5-110723 (SD)	Chloroethane	147	60 - 138	20 - 138	percent	J/None	M

SY-OBMW12-110723 (SD)	2-Chlorotoluene	127	79 - 122	20 - 122	percent	J/None	M	
SY-OBMW12-110723 (MS)	Carbon disulfide	140	64 - 133	20 - 133	percent	J/None	M	
SY-OBMW12-110723 (SD)	Carbon disulfide	149	64 - 133	20 - 133	percent	J/None	M	
SY-OBMW12-110723 (MS)	Chloroethane	144	60 - 138	20 - 138	percent	J/None	M	
SY-OBMW12-110723 (SD)	Chloroethane	153	60 - 138	20 - 138	percent	J/None	M	
SY-OBMW12-110723 (MS)	Diethyl ether (Ethyl ether)	137	68 - 129	20 - 129	percent	J/None	M	
SY-OBMW12-110723 (SD)	Diethyl ether (Ethyl ether)	135	68 - 129	20 - 129	percent	J/None	M	
SY-OBMW12-110723 (SD)	Ethylbenzene	122	79 - 121	20 - 121	percent	J/None	M	
SY-OBMW12-110723 (SD)	m,p-Xylene	125	80 - 121	20 - 121	percent	J/None	M	
SY-OBMW12-110723 (MS)	tert-Butyl alcohol	131	68 - 129	20 - 129	percent	J/None	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW8260D

Qualified Results associated with the MS Recovery for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW2-80.5-95.5-110723 67798-007	N	Toluene	2.0	1.8 J	1.8 J	+	ug/l	C/M/TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-OBMW12-110723 (SD)	1,1,2-Trichloroethane	21.7	< 20	< 20	rpd	J/None	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270E, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17096LCS17096 (BS)	4-Chloro-3-methylphenol	43.0	52 - 119	20 - 119	percent	J/UJ	C	
17096LCS17096 (BS)	4-Nitrophenol	22.0	61 - 133	20 - 133	percent	J/UJ	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270E, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17096LCSD17096 (BD)	2,4,5-Trichlorophenol	25.6	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2,4,6-Trichlorophenol	24.9	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2,4-Dichlorophenol	36.3	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	2,4-Dinitrophenol	30.9	< 20	< 20	rpd	J/None	Z

17096LCSD17096 (BD)	4-Nitrophenol	34.7	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	Benzoic acid	38.3	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	Hexachlorocyclopentadiene	20.6	< 20	< 20	rpd	J/None	Z	
17096LCSD17096 (BD)	Phenol	28.8	< 20	< 20	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270E, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270E, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW2-80.5-95.5-110723 (SD)	2,4,5-Trichlorophenol	20.4	< 20	< 20	rpd	J/None	D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D	MS RPD
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
P2	Improper preparation/extraction
TR	Trace Level Detect
Z	LCS RPD

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to low LCS/LCSD %R, several associated non-detect results were qualified as estimated (UJ).
Was the LCS/LCSD RPD within project acceptance limits?		•		Due to high LCS/LCSD RPD, one result was qualified as estimated (J).
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Due to low MS/MSD %R, several non-detect analytes were qualified as estimated (UJ).
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?		•		Due to low surrogate percent recovery, several associated detect and non-detect sample results were qualified as estimated with a low bias (J-/UJ).
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field replicates were not collected for this SDG.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))				
Review Questions	Yes	No	NA	Comment
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

Review Questions

Method: MADEPVP (Method for the Determination of Volatile Petroleum Hydrocarbons (VPH))

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Due to ethylbenzene in the method blank, two results were qualified as non-detect (U).
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Although several MS/MSDs recovered high, the associated sample results were non-detect so sample qualification was not necessary.
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field replicates were not collected in this SDG.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•

Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?				
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Due to low MSD recovery, one total and one dissolved potassium results were qualified as estimated with a low bias (J-). Although magnesium was out for the total and dissolved MS/MSD, the native sample concentration was greater than four times the spike concentration so sample qualification was not necessary.
Was the MS/MSD RPD within project acceptance limits?	•			
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS was not reported.
Was a Dilution Test/Serial Dilution performed and within project acceptance criteria?			•	Serial dilution was not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field replicates were not collected for this SDG.
Were reported sample concentrations within calibration range?	•

Was the MS/MSD RPD within project acceptance limits?	•			
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?		•		Sample SY-OBMW4R-110723 was spilled during extraction loosing an unknown quantity, which resulted in low surrogate recoveries. Due to the surrogates recovering below 10%, the non-detected results were qualified as recommended for exclusion (X).
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field replicates were not collected for this SDG.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			

Review Questions

Method: SW8082A (Polychlorinated Biphenyls (PCB))				
Review Questions	Yes	No	NA	Comment
Were DoD QSM corrective actions followed if deviations were noted?	•			Due to sample SY-OBMW4R-110723 loosing an unknown quantity of volume during extraction due to a laboratory error, the results have been qualified as recommended for exclusion (X) and assigned reason code P2. Although the surrogate recovered low in SY-OBMW4R-110723, there was not enough sample volume left for re-analysis.
Were any data recommended for exclusion in the data validation process?	•			Due to the surrogates recovering below 10% in sample SY-OBMW4R-110723 and an error occurring resulting in loss of the sample extract, the non-detected results were qualified as recommended for exclusion (X). All remaining data is acceptable as reported.

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.

Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Due to carbon disulfide in the method blank, one result was qualified as non-detect (U).
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to high LCS/LCSD percent recovery, several detected results were qualified as estimated with a high bias (J+). Associated non-detect results were not qualified due to the high LCS/LCSD recoveries.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Due to high MS/MSD percent recovery, one toluene result was qualified as estimated with a high bias (J+). Associated non-detect results were not qualified due to the high MS/MSD recoveries.
Was the MS/MSD RPD within project acceptance limits?		•		Although 1,1,2-trichloroethane had high MS/MSD RPD, the associated result was non-detect so sample qualification was not necessary.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field replicates were not collected in this SDG.
Were reported sample concentrations within calibration range?	•			

Review Questions

Review Questions	Yes	No	NA	Comment
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

Review Questions

Method: SW8270E (Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to low LCS/LCSD %R, several non-detected analytes were qualified as estimated (UJ). Although hexachloroethane in the LCSD recovered, below 20%, the LCS recovered within the control limit. Based on professional judgement, the X qualifier for hexachloroethane was changed to UJ during data validation.
Was the LCS/LCSD RPD within project acceptance limits?		•		Although several LCS/LCSD RPDs were high, the associated results were non-detect so sample qualification was not necessary.
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Although benzoic acid, hexachloroethane, and phenol recovered below 20%, all had percent recoveries greater than 10%, which is the rejection point in DoD Module 1. Based on professional judgement, the X qualifier for benzoic acid, hexachloroethane, and phenol was changed to UJ during data validation. Additionally, there were several analytes that recovered low in the MS/MSDs which resulted in the associated non-detect results being qualified as estimated (UJ).
Was the MS/MSD RPD within project acceptance limits?		•		Although several MS/MSD RPDs were high, the associated results were non-detect so sample qualification was not necessary.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Absolute Resource Associates, LLC, Portsmouth, NH and were reported under sample delivery group (SDG) 67839. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 111 results (4.66%) out of the 2382 results (sample and field QC samples) reported are qualified based on review and 8 results (0.34%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
MADEPEP	The laboratory case narrative indicates the following: "A reportable concentration of the range, Unadjusted C11-C22 Aromatics and C11-C22 Aromatics, was detected in the BLK17157. There is no impact to the data as these ranges were not detected above the LOQ in the associated field samples." Associated samples were qualified according during data validation. "The sample 67836-011 and LCSD17156 did not meet acceptance criteria for the extraction surrogate 1-chloro-octadecane. No additional sample volume remains for re-analysis. The results have been qualified accordingly." Associated results were qualified accordingly during data validation. "The LCS17156 did not meet the acceptance criteria for C9-C18 Aliphatics. This range showed low recovery. No additional sample volume remains for re-analysis. The results have been qualified accordingly. The relative percent difference between the LCS and LCSD17156 was outside the acceptance criteria for naphthalene and 2-methylnaphthalene. There is no impact to the data as these compounds were not detected in the associated samples." Associated results were qualified accordingly during data validation. "The LCS/D17157 did not meet the acceptance criteria for C9-C18 Aliphatics and C19-C36 Aliphatics. These ranges showed low recoveries. No additional sample volume remains for re-analysis. The results have been qualified accordingly." Associated results were qualified accordingly during data validation.
MADEPVP	The laboratory case narrative indicates the following: "The relative percent difference between the LCS and LCSD2303859 was outside the acceptance criteria for Unadjusted C9-C12 Aliphatics. There is no impact to the data as this range was not detected in the associated samples." The associated results were non-detect so sample qualification was not warranted.
SW6020A	This includes both total and dissolved 6020A results. The case narrative indicates the following: "Samples associated with continuing calibration verifications (CCV) that do not meet the acceptance criteria are re-analyzed for those particular elements. In circumstances where the same elements do not meet the acceptance criteria in the re-analysis, the results are reported with qualifiers. (Percent recovery range between 75% and 125%)" CCV review is not encompassed in Stage 2A data validation.
SW7470A	This includes both total and dissolved 7470A results.
SW8082A	No additional comments; see Checklist for detail.
SW8260D	The laboratory case narrative indicates the following: "The LCSD2303756 did not meet the acceptance criteria for m&p-xylenes. This compound showed high recovery. There is no impact to the data as this analyte was not detected in the associated samples." The associated samples were non-detect so sample qualification was not warranted. "The LCS/D2303766 did not meet the acceptance criteria for diethyl ether, 1,3-dichloropropane, and m&p-xylenes. These compounds showed high recoveries. The relative percent difference between the LCS and LCSD2303766 was outside the acceptance criteria for 1,1,2-trichloroethane. There is no impact to the data as this analyte was not detected in the associated samples." The associated samples were non-detect so sample qualification was not warranted.

SW8270E	The laboratory case narrative indicates the following: "The LCS/D17124 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17124 was outside the acceptance criteria for one compound. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The associated sample results were qualified accordingly during data validation. "The LCS/D17145 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17145 was outside the acceptance criteria for several compounds. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The associated sample results were qualified accordingly during data validation.

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method MADEPEP, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17156PB17156 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	78.2	< 53.968	< 100	ug/l	U/None*	L	
17156PB17156 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic (Unadjusted)	78.2	< 59.968	< 100	ug/l	U/None*	L	
17157PB17157 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	101	< 53.968	< 100	ug/l	U/None*	L	
17157PB17157 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic (Unadjusted)	101	< 59.968	< 100	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for MADEPEP

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW3-145-155-110923 67839-005	N	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	100	57 J	100 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPEP, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPEP, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17156LCSD17156 (BD)	2-Methylnaphthalene	27.7	< 25	< 25	rpd	J/None	Z	
17156LCSD17156 (BD)	Naphthalene	27.6	< 25	< 25	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method MADEPVP, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303859BLK112023A (LB)	Ethylbenzene	0.489	< 0.404	< 2	ug/l	U/None*	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020A, Dissolved, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17205PB 17205 (LB)	Aluminum	0.0204	< 0.01012	< 0.05	mg/l	J/UJ	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020A, Dissolved, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW3-47-62-110923 (SD)	Magnesium	80.0	83 - 118	30 - 125	percent	J/UJ	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020A, Total, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW3-47-62-110923 (MS)	Magnesium	218	83 - 118	30 - 125	percent	J/None	M	Spike amount Insignificant
SY-BRMW3-47-62-110923 (SD)	Magnesium	32.0	83 - 118	30 - 125	percent	J/UJ	M	Spike amount Insignificant
SY-BRMW3-47-62-110923 (SD)	Sodium	82.0	85 - 117	30 - 125	percent	J/UJ	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW40-62-72-110923 (N)	Tetrahydrofuran	3.35	< 2	< 2	ug/l	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303756LCSD111623G (BD)	m,p-Xylene	125	80 - 121	20 - 121	percent	J/None	C	
2303766LCSD111623H (BD)	1,3-Dichloropropane	124	80 - 119	20 - 119	percent	J/None	C	
2303766LCSD111623H (BD)	Diethyl ether (Ethyl ether)	130	68 - 129	20 - 129	percent	J/None	C	
2303766LCSD111623H (BD)	m,p-Xylene	124	80 - 121	20 - 121	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303766LCSD111623H (BD)	1,1,2-Trichloroethane	21.3	< 20	< 20	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270E, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW10-65-75-110923 (N)	Bis(2-ethylhexyl)phthalate	119	< 25	< 25	ug/l	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW8270E

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW10-65-75-110923 67839-011	FD	Bis(2-ethylhexyl)phthalate	5.0	3.0 U	3.0 UJ		ug/l	D3
SY-BRMW1-65-75-110923 67839-010	N	Bis(2-ethylhexyl)phthalate	25	120	120 J		ug/l	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270E, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Quality Control Outliers for test method SW8270E, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17124LCSD17124 (BD)	Benzidine	30.5	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	1,2,4-Trichlorobenzene	25.6	< 20	< 20	rpd	J/None	Z

17145LCSD17145 (BD)	Hexachlorobutadiene	36.8	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	Hexachloroethane	42.4	< 20	< 20	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270E, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW1-65-75-110923 (N)		16.3	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW3-47-62-110923 (N)		17.3	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW40-62-72-110923 (FD)		17.2	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW4-138-148-110923 (N)		17.3	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW4-62-72-110923 (N)		17.2	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D3	Field Duplicate RPD
H1	Test Hold Time
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
Z	LCS RPD

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Due to detects in the method blank, several results were qualified as non-detect (U).
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to low LCS/LCSD recoveries, several non-detect analytes were qualified as estimated (UJ). Due to C9-C18 EPH, Aliphatic recovering below 20% in both the LCS and LCSD for batch 17157, the non-detect result for SY-BRMW10-65-75-110923 was qualified as recommended for exclusion (X).
Was the LCS/LCSD RPD within project acceptance limits?		•		Although several LCS/LCSD RPD were high, the associated results were non-detect so sample qualification was not necessary.
Was a MS/MSD pair prepared with each batch?			•	A MS/MSD was not reported.
Were MS/MSD recoveries within project acceptance limits?			•	A MS/MSD was not reported.
Was the MS/MSD RPD within project acceptance limits?			•	A MS/MSD was not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))				
Review Questions	Yes	No	NA	Comment
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?	•			Due to C9-C18 EPH, Aliphatic recovering below 20% in both the LCS and LCSD for batch 17157, the non-detect result for SY-BRMW10-65-75-110923 was qualified as recommended for exclusion (X). All remaining results were acceptable as reported or as qualified during data validation.

Review Questions

Method: MADEPVP (Method for the Determination of Volatile Petroleum Hydrocarbons (VPH))

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•

Review Questions

Method: MADEPVP (Method for the Determination of Volatile Petroleum Hydrocarbons (VPH))				
Review Questions	Yes	No	NA	Comment
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported.

Review Questions

Method: SW6020A (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Due to detects in the method blank for total metals, three aluminum, one cobalt, and five zinc results were qualified as non-detect (U) and one aluminum and seven antimony results were qualified as estimated with a high bias (J+). No qualification was necessary for total potassium since all results were significantly higher than the blank. Although dissolved aluminum was detected in the method blank, the associated results were non-detect so sample qualification was not necessary. FUDSChem ADR qualified the non-detect results as estimated (UJ) and this qualifier was removed during data validation.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Although dissolved magnesium, total magnesium, and total sodium were not within the acceptance criteria for the MS/MSD recovery, the native sample concentrations were greater than four times the spike concentrations so sample qualification was not necessary.
Was the MS/MSD RPD within project acceptance limits?	•			
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS was not reported.

Review Questions

Method: SW6020A (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Was a Dilution Test/Serial Dilution performed and within project acceptance criteria?			•	Serial dilution was not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not collected.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		Due to the absolute difference of dissolved iron between SY-BRMW4-62-72-110923 and SY-BRMW40-62-72-110923 exceeding 1X the LOQ, the results in these samples were qualified as estimated (J). Due to high RPD between between SY-BRMW4-62-72-110923 and SY-BRMW40-62-72-110923 for dissolved manganese, the results in these samples were qualified as estimated (J).
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		The tetrahydrofuran results for samples SY-BRMW4-62-72-110923 and SY-BRMW40-62-72-110923 were qualified by FUDSChem ADR because one result was non-detect and one was detected. When the LOD was used in absolute difference calculation for the non-detect result, the difference was less then than 1X the LOQ; therefore, this qualifier was removed during data validation.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All results are acceptable as reported or as qualified during data validation.

Review Questions

Method: SW8270E (Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			Although FUDSChem ADR flagged five samples for being out of holding time (the collection to analysis dates were used for evaluation), the samples were extracted within 14 days from collection and analyzed within 40 days from extraction. No sample qualification was necessary and the qualifier was removed during data validation.
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to low LCS/LCSD %R, several analytes were qualified as estimated with a low bias (J-/UJ). Due to benzoic acid recovering at 11% and 0% in the LCS and LCSD, respectively, seven associated non-detect benzoic acid results were qualified as recommended for exclusion (X).
Was the LCS/LCSD RPD within project acceptance limits?		•		Although several LCS/LCSD RPDs were high, the associated results were non-detect so sample qualification was not necessary.
Was a MS/MSD pair prepared with each batch?			•	A MS/MSD was not reported.
Were MS/MSD recoveries within project acceptance limits?			•	A MS/MSD was not reported.
Was the MS/MSD RPD within project acceptance limits?			•	A MS/MSD was not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?	•			

Review Questions

Method: SW8270E (Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		Due to the absolute difference of bis(2-ethylhexyl)phthalate between SY-BRMW10-65-75-110923 and SY-BRMW1-65-75-110923 exceeding 1X the LOQ, the bis(2-ethylhexyl)phthalate results in these samples were qualified as estimated (J/UJ).
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?	•			Due to benzoic acid recovering severely low in the LCS and LCSD, seven non-detect benzoic acid results were qualified as recommended for exclusion (X). The remaining results were acceptable as reported or as qualified during data validation.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Absolute Resource Associates, LLC, Portsmouth, NH and were reported under sample delivery group (SDG) 67839. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 111 results (4.66%) out of the 2382 results (sample and field QC samples) reported are qualified based on review and 8 results (0.34%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
MADEPEP	The laboratory case narrative indicates the following: "A reportable concentration of the range, Unadjusted C11-C22 Aromatics and C11-C22 Aromatics, was detected in the BLK17157. There is no impact to the data as these ranges were not detected above the LOQ in the associated field samples." Associated samples were qualified according during data validation. "The sample 67836-011 and LCSD17156 did not meet acceptance criteria for the extraction surrogate 1-chloro-octadecane. No additional sample volume remains for re-analysis. The results have been qualified accordingly." Associated results were qualified accordingly during data validation. "The LCS17156 did not meet the acceptance criteria for C9-C18 Aliphatics. This range showed low recovery. No additional sample volume remains for re-analysis. The results have been qualified accordingly. The relative percent difference between the LCS and LCSD17156 was outside the acceptance criteria for naphthalene and 2-methylnaphthalene. There is no impact to the data as these compounds were not detected in the associated samples." Associated results were qualified accordingly during data validation. "The LCS/D17157 did not meet the acceptance criteria for C9-C18 Aliphatics and C19-C36 Aliphatics. These ranges showed low recoveries. No additional sample volume remains for re-analysis. The results have been qualified accordingly." Associated results were qualified accordingly during data validation.
MADEPVP	The laboratory case narrative indicates the following: "The relative percent difference between the LCS and LCSD2303859 was outside the acceptance criteria for Unadjusted C9-C12 Aliphatics. There is no impact to the data as this range was not detected in the associated samples." The associated results were non-detect so sample qualification was not warranted.
SW6020A	This includes both total and dissolved 6020A results. The case narrative indicates the following: "Samples associated with continuing calibration verifications (CCV) that do not meet the acceptance criteria are re-analyzed for those particular elements. In circumstances where the same elements do not meet the acceptance criteria in the re-analysis, the results are reported with qualifiers. (Percent recovery range between 75% and 125%)" CCV review is not encompassed in Stage 2A data validation.
SW7470A	This includes both total and dissolved 7470A results.
SW8082A	No additional comments; see Checklist for detail.
SW8260D	The laboratory case narrative indicates the following: "The LCSD2303756 did not meet the acceptance criteria for m&p-xylenes. This compound showed high recovery. There is no impact to the data as this analyte was not detected in the associated samples." The associated samples were non-detect so sample qualification was not warranted. "The LCS/D2303766 did not meet the acceptance criteria for diethyl ether, 1,3-dichloropropane, and m&p-xylenes. These compounds showed high recoveries. The relative percent difference between the LCS and LCSD2303766 was outside the acceptance criteria for 1,1,2-trichloroethane. There is no impact to the data as this analyte was not detected in the associated samples." The associated samples were non-detect so sample qualification was not warranted.

SW8270E	The laboratory case narrative indicates the following: "The LCS/D17124 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17124 was outside the acceptance criteria for one compound. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The associated sample results were qualified accordingly during data validation. "The LCS/D17145 did not meet the acceptance criteria for several compounds. These compounds showed low recoveries. The relative percent difference between the LCS and LCSD17145 was outside the acceptance criteria for several compounds. No additional sample volume remains for re-analysis. The results have been qualified accordingly." The associated sample results were qualified accordingly during data validation.

Reviewed by Christina Ashdown, Senior Chemist, EnSafe, Inc. February 01, 2024

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Kevin Kha

Reviewed by Kevin Kha, Environmental Scientist, EnSafe, Inc. February 14, 2024

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method MADEPEP, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17156PB17156 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	78.2	< 53.968	< 100	ug/l	U/None*	L	
17156PB17156 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic (Unadjusted)	78.2	< 59.968	< 100	ug/l	U/None*	L	
17157PB17157 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	101	< 53.968	< 100	ug/l	U/None*	L	
17157PB17157 (LB)	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic (Unadjusted)	101	< 59.968	< 100	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for MADEPEP

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW3-145-155-110923 67839-005	N	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	100	57 J	100 U		ug/l	L
SY-BRMW40-62-72-110923 67839-002	FD	C11-C22 Extractable Petroleum Hydrocarbons, Aromatic	100	59 J	100 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPEP, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17156LCS17156 (BS)	C9-C18 Extractable Petroleum Hydrocarbons, Aliphatic	37.0	40 - 140	20 - 140	percent	J/UJ	C	
17157LCS17157 (BS)	C19-C36 Extractable Petroleum Hydrocarbons, Aliphatic	36.0	40 - 140	20 - 140	percent	J/UJ	C	
17157LCS17157 (BS)	C9-C18 Extractable Petroleum Hydrocarbons, Aliphatic	17.0	40 - 140	20 - 140	percent	J/X	C	
17157LCSD17157 (BD)	C19-C36 Extractable Petroleum Hydrocarbons, Aliphatic	38.0	40 - 140	20 - 140	percent	J/UJ	C	
17157LCSD17157 (BD)	C9-C18 Extractable Petroleum Hydrocarbons, Aliphatic	15.0	40 - 140	20 - 140	percent	J/X	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method MADEPEP, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17156LCSD17156 (BD)	2-Methylnaphthalene	27.7	< 25	< 25	rpd	J/None	Z	
17156LCSD17156 (BD)	Naphthalene	27.6	< 25	< 25	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method MADEPVP, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303859BLK112023A (LB)	Ethylbenzene	0.489	< 0.404	< 2	ug/l	U/None*	L	
2303861BLK112023A (LB)	Ethylbenzene	0.469	< 0.404	< 2	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method MADEPVP, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
2303859LCSD112023A (BD)	C9-C12 Volatile Petroleum Hydrocarbons, Aliphatic	36.6	< 25	< 25	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020A, Dissolved, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW40-62-72-110923 (N)	Iron	0.135	< 0.054	< 0.054	mg/l	J/UJ	D3	
SY-BRMW40-62-72-110923 (N)	Manganese	50.8	< 30	< 30	rpd	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW6020A, Dissolved

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW40-62-72-110923 67839-013	FD	Iron	0.054	0.074	0.074 J		mg/l	D3

SY-BRMW4-62-72-110923 67839-012	N	Manganese	0.011	0.55	0.55 J		mg/l	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020A, Dissolved, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17205PB 17205 (LB)	Aluminum	0.0204	< 0.01012	< 0.05	mg/l	J/UJ	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020A, Dissolved, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW3-47-62-110923 (SD)	Magnesium	80.0	83 - 118	30 - 125	percent	J/UJ	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020A, Total, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17218PB 17218 (LB)	Aluminum	0.0186	< 0.01012	< 0.05	mg/l	J/UJ	L	
17218PB 17218 (LB)	Antimony	0.000219	< 0.00014	< 0.001	mg/l	J/UJ	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270E, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
17124LCSD17124 (BD)	Benzidine	30.5	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	1,2,4-Trichlorobenzene	25.6	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	1,2-Dichlorobenzene	24.3	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	1,3-Dichlorobenzene	31.4	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	1,4-Dichlorobenzene	29.1	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	4-Chloro-3-methylphenol	28.0	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	Benzoic acid	199	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	Benzyl butyl phthalate	21.3	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	Dimethyl phthalate	35.3	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	Hexachlorobutadiene	36.8	< 20	< 20	rpd	J/None	Z	
17145LCSD17145 (BD)	Hexachloroethane	42.4	< 20	< 20	rpd	J/None	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270E, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW1-65-75-110923 (N)		16.3	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW3-47-62-110923 (N)		17.3	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW40-62-72-110923 (FD)		17.2	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW4-138-148-110923 (N)		17.3	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL
SY-BRMW4-62-72-110923 (N)		17.2	< 14	< 28	days	J/UJ	H1	Prep to Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D3	Field Duplicate RPD
H1	Test Hold Time
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
Z	LCS RPD

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Due to detects in the method blank, several results were qualified as non-detect (U).
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to low LCS/LCSD recoveries, several non-detect analytes were qualified as estimated (UJ). Due to C9-C18 EPH, Aliphatic recovering below 20% in both the LCS and LCSD for batch 17157, the non-detect result for SY-BRMW10-65-75-110923 was qualified as recommended for exclusion (X).
Was the LCS/LCSD RPD within project acceptance limits?		•		Although several LCS/LCSD RPD were high, the associated results were non-detect so sample qualification was not necessary.
Was a MS/MSD pair prepared with each batch?			•	A MS/MSD was not reported.
Were MS/MSD recoveries within project acceptance limits?			•	A MS/MSD was not reported.
Was the MS/MSD RPD within project acceptance limits?			•	A MS/MSD was not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			

Review Questions

Method: MADEPEP (Method for the Determination of Extractable Petroleum Hydrocarbons (EPH))				
Review Questions	Yes	No	NA	Comment
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?	•			Due to C9-C18 EPH, Aliphatic recovering below 20% in both the LCS and LCSD for batch 17157, the non-detect result for SY-BRMW10-65-75-110923 was qualified as recommended for exclusion (X). All remaining results were acceptable as reported or as qualified during data validation.

Review Questions

Method: MADEPVP (Method for the Determination of Volatile Petroleum Hydrocarbons (VPH))

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•

Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Due to detects in the method blank for total metals, three aluminum, one cobalt, and five zinc results were qualified as non-detect (U) and one aluminum and seven antimony results were qualified as estimated with a high bias (J+). No qualification was necessary for total potassium since all results were significantly higher than the blank. Although dissolved aluminum was detected in the method blank, the associated results were non-detect so sample qualification was not necessary. FUDSChem ADR qualified the non-detect results as estimated (UJ) and this qualifier was removed during data validation.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Although dissolved magnesium, total magnesium, and total sodium were not within the acceptance criteria for the MS/MSD recovery, the native sample concentrations were greater than four times the spike concentrations so sample qualification was not necessary.
Was the MS/MSD RPD within project acceptance limits?	•			
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS was not reported.

Review Questions

Method: SW6020A (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Was a Dilution Test/Serial Dilution performed and within project acceptance criteria?			•	Serial dilution was not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not collected.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		Due to the absolute difference of dissolved iron between SY-BRMW4-62-72-110923 and SY-BRMW40-62-72-110923 exceeding 1X the LOQ, the results in these samples were qualified as estimated (J). Due to high RPD between between SY-BRMW4-62-72-110923 and SY-BRMW40-62-72-110923 for dissolved manganese, the results in these samples were qualified as estimated (J).
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		The tetrahydrofuran results for samples SY-BRMW4-62-72-110923 and SY-BRMW40-62-72-110923 were qualified by FUDSChem ADR because one result was non-detect and one was detected. When the LOD was used in absolute difference calculation for the non-detect result, the difference was less then than 1X the LOQ; therefore, this qualifier was removed during data validation.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All results are acceptable as reported or as qualified during data validation.

Review Questions

Method: SW8270E (Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the samples received.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			Although FUDSChem ADR flagged five samples for being out of holding time (the collection to analysis dates were used for evaluation), the samples were extracted within 14 days from collection and analyzed within 40 days from extraction. No sample qualification was necessary and the qualifier was removed during data validation.
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blanks were not collected for this method.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not collected.
Were equipment blanks analyzed at the proper frequency and in control?			•	Equipment blanks were not collected.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		Due to low LCS/LCSD %R, several analytes were qualified as estimated with a low bias (J-/UJ). Due to benzoic acid recovering at 11% and 0% in the LCS and LCSD, respectively, seven associated non-detect benzoic acid results were qualified as recommended for exclusion (X).
Was the LCS/LCSD RPD within project acceptance limits?		•		Although several LCS/LCSD RPDs were high, the associated results were non-detect so sample qualification was not necessary.
Was a MS/MSD pair prepared with each batch?			•	A MS/MSD was not reported.
Were MS/MSD recoveries within project acceptance limits?			•	A MS/MSD was not reported.
Was the MS/MSD RPD within project acceptance limits?			•	A MS/MSD was not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM was not performed.
Were surrogate recoveries within project acceptance limits?	•

FD = Field Duplicate
RL = Reporting Limit
RPD = Relative Percent Difference

RL Check = If either the primary sample or field duplicate result is less than 5 times the RL then the criteria used to determine if the field duplicate is outside QC limits is +/- RL for Water and +/- 2 times RL for Soil"

SY-BRMW4-62-72-110923 / SY-BRMW40-62-72-110923	67839-001 / 67839-002	Pyridine	ND	ND	2.00	NA	30	NA	OK

FD = Field Duplicate
RL = Reporting Limit
RPD = Relative Percent Difference

RL Check = If either the primary sample or field duplicate result is less than 5 times the RL then the criteria used to determine if the field duplicate is outside QC limits is +/- RL for Water and +/- 2 times RL for Soil"

Data Validation Report for SQ6112

Facility:	D01ME0004-07, Dow Military Airfield, Salvage Yard
Event:	Dow SY Groundwater Nov 2023
SDG:	SQ6112
Guidance Document:	Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022
Prime Contractor:	Credere Associates, LLC, Westbrook, ME
Project Manager:	Peter Thompson
Contract Laboratory(ies):	Katahdin Analytical Services, Scarborough, ME
Data Review Contractor:	EnSafe, Inc.
Data Review Level:	S2AVEM
Primary Data Reviewer:	Kevin Kha, Environmental Chemist
Second Reviewer:	Christina Ashdown, Senior Scientist
Date Submitted:	January 25, 2024

Field Sample ID	Lab Sample ID	Matrix	Type/Type Code	A2320B	A3500B	A5310B	BNASIM	E300	RSK175	SW7196A	SW8260C

SY-OBMW7-110623	SQ6112-1	Water	Field Sample/N	X	X	X	X	X	X	X	X
TB30-110623	SQ6112-3	Water	Trip Blank/TB								X

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) SQ6112. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 19 results (26.39%) out of the 72 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
A2320B	No additional comments; see Checklist for detail.
A3500B	No additional comments; see Checklist for detail.
A5310B	The laboratory case narrative indicates the following: "On the raw data packet for the total organic carbon (TOC) analysis, the calibration curve used for processing the TOC data for the samples of word order SQ6112 is marked as having expired on 11/24/23 (the samples were analyzed on 12/1/23). Katahdin's Standard Operating Procedure for TOC analysis states that calibration curves are only valid for 3 months, but this is in the process of being updated to the most current standards which state that these calibration curves do not have a 3-month expiration date." Calibration curves were not reviewed for Stage 2A validation. therefore no data were qualified.
BNASIM	The laboratory case narrative indicates the following: "Sample SQ6112-2RA has low recoveries for the extraction surrogates 2-methylnaphthalene-d10 and pyrene-d10 that were outside of the DoD QSM acceptance limits. The client was contacted on 12/06/2023 and the laboratory was instructed to proceed with narration." The associated results in sample SY-OBMW10-110623 were qualified as estimated (UJ) during data validation. "The method blank WG345173-1 had a high recovery for the extraction surrogate 2-methylnaphthalene-d10 that was outside of the DoD QSM acceptance limits. As this would indicate a high bias, and there were no target analytes detected in the method blank, no further action was taken." Laboratory quality control samples were not qualified during data validation. "The LCS WG345173-2RA had a high recovery for the extraction surrogate 2-methylnaphthalene-d10 that was outside of the DoD QSM acceptance limits. Since the recoveries of the spiked target analytes were acceptable, no further action was taken." Laboratory quality control samples were not qualified during data validation.
E300	No additional comments; see Checklist for detail.
RSK175	The laboratory case narrative indicates the following: "The target analyte methane was detected below 1/2 the LOQ in the method blank WG345521-1. According to the DoD QSM, a method blank is considered to be contaminated if the concentration of any target analyte in the blank exceeds 1/2 the reporting limit and is greater than 1/10 the amount measured in any sample. Since the method blank was acceptable, no further action was taken." The associated methane results were qualified as nondetected during data validation.
SW7196A	No additional comments; see Checklist for detail.
SW8260C	No additional comments; see Checklist for detail.

Reviewed by Kevin Kha, Environmental Chemist, EnSafe, Inc.

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Christina Ashdown, Senior Scientist, EnSafe, Inc. February 14, 2024

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method A2320B, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345360-1 (LB)	Alkalinity, Total (as CaCO3)	2.00	< 0.23	< 5	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-OBMW10-110623 (N)	2-Methylnaphthalene-d10	39.1	43 - 92	10 - 92	percent	J/UJ	I	
SY-OBMW10-110623 (N)	Pyrene-d10	44.2	53 - 166	10 - 166	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW10-110623 SQ6112-2	N	Pyrene	0.19	0.093 U	0.093 UJ		ug/l	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method E300, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345075-1 (LB)	Sulfate	0.0730	< 0.064	< 1	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method RSK175, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345521-1 (LB)	Methane	3.40	< 2.6	< 10	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for RSK175

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW10-110623 SQ6112-2	N	Methane	10	4.5 J	10 U		ug/l	L
SY-OBMW7-110623 SQ6112-1	N	Methane	10	7.2 J	7.2 J	+	ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: BNASIM		**Extraction Method: SW3510C**

SY-OBMW10-110623 SQ6112-2	N	Phenanthrene	0.19	0.093 U	0.093 UJ		ug/l	I
SY-OBMW10-110623 SQ6112-2	N	Pyrene	0.19	0.093 U	0.093 UJ		ug/l	I

Test Method: RSK175		**Extraction Method: METHOD**						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW10-110623 SQ6112-2	N	Methane	10	4.5 J	10 U		ug/l	L
SY-OBMW7-110623 SQ6112-1	N	Methane	10	7.2 J	7.2 J	+	ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method RSK175								
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	ADR Reason	Modified Result	Reason
SY-OBMW7-110623 SQ6112-1	N	Methane	10	7.2 J	10 U	L	7.2 J	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
I	Surrogate recovery outside project limits.
L	Lab Blank
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: A2320B (Alkalinity by Titrimetric Method)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Although alkalinity was detected in the method blank, the associated results were significantly greater than the method blank, therefore no data were qualified.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	MS/MSD not reported.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD not reported.
Was the MS/MSD RPD within project acceptance limits?			•	MS/MSD not reported.
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS not required per the method.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not perormed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	No field replicates were submitted with these samples.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•

Method: BNASIM (GC/MS-SIM Analysis by SW8270)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only was samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCSD not performed.
Was a MS/MSD pair prepared with each batch?			•	MS/MSD not reported.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD not reported.
Was the MS/MSD RPD within project acceptance limits?			•	MS/MSD not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were surrogate recoveries within project acceptance limits?		•		Due to surrogate %R below criteria, sample SY-OBMW10-110623 was qualified as nondetected estimated (UJ).
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	No field replicates were submitted with these samples.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) SQ6133. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 17 results (5.06%) out of the 336 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
A2320B	No additional comments; see Checklist for detail.
A3500B	No additional comments; see Checklist for detail.
A5310B	No additional comments; see Checklist for detail.
BNASIM	The laboratory case narrative indicates the following: "Due to a laboratory error, the MS/MSD WG345531-5 and 6 were extracted two days out of hold time." The affected samples were laboratory quality control samples and no data were qualified. "The MS WG345301-5 and MS WG345531-5 had high recoveries for the extraction surrogate 2-methylnaphthalene-d10 that were outside of the DoD QSM acceptance limits." The affected samples were laboratory quality control samples and no data were qualified.
E300	The laboratory case narrative indicates the following: "The nitrate matrix spike (WG345141-4) and matrix spike duplicate (WG345141-5) on sample SQ6133-3 both had low recoveries that were outside of the acceptance limits." The MS/MSD %R were within the project acceptance limits of 80-120% and no data were qualified. "The sulfate matrix spike (WG345141-4) on sample SQ6133-3 had a low recovery that was outside of the acceptance limits." The MS %R was within the project acceptance limits of 80-120% and no data were qualified.
RSK175	The laboratory case narrative indicates the following: "The target analyte methane was detected below 1/2 the LOQ in the method blank WG345593-1. According to the DoD QSM, a method blank is considered to be contaminated if the concentration of any target analyte in the blank exceeds 1/2 the reporting limit and is greater than 1/10 the amount measured in any sample. Since the method blank was acceptable, no further action was taken." The associated methane results were qualified as nondetected during data validation.
SW7196A	No additional comments; see Checklist for detail.
SW8260C	The laboratory case narrative indicates the following: "The reported percent recovery acceptance limits for the Laboratory Control Samples (LCSs) were evaluated using DoD QSM acceptance limits. The recoveries of the spiked analytes in the LCS, LCSD, Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are compared to these acceptance limits. Katahdin standard operating procedure is to take corrective action only if the number of spiked analytes in the LCS that are outside of the QC limits is greater than the DoD QSM allowable number of exceedances. If the associated MS/MSD has greater than the allowable number of exceedances, no corrective action is taken, as long as the LCS is acceptable." The MS/MSD %R for vinyl chloride in sample SY-OBMW12-110723 was outside of DoD QSM acceptance criteria and was qualified during data validation.

January 22, 2024

Reviewed by Kevin Kha, Environmental Chemist, EnSafe, Inc.

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Christina Ashdown, Senior Scientist, EnSafe, Inc. February 14, 2024

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method A2320B, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345360-1 (LB)	Alkalinity, Total (as CaCO3)	2.00	< 0.23	< 5	mg/l	U/None*	L	
WG345462-1 (LB)	Alkalinity, Total (as CaCO3)	2.80	< 0.23	< 5	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW2-80.5-95.5-110723 (SD)	Benzo(a)pyrene	50.5	53 - 120	20 - 120	percent	J/UJ	M	
SY-BRMW2-80.5-95.5-110723 (SD)	Benzo (g,h,i)perylene	38.5	44 - 128	20 - 128	percent	J/UJ	M	
SY-BRMW2-80.5-95.5-110723 (SD)	Benzo (k)fluoranthene	49.4	54 - 125	20 - 125	percent	J/UJ	M	
SY-BRMW2-80.5-95.5-110723 (SD)	Dibenz (a,h)anthracene	38.5	44 - 131	20 - 131	percent	J/UJ	M	
SY-BRMW2-80.5-95.5-110723 (SD)	Indeno(1,2,3-c,d)pyrene	40.4	48 - 130	20 - 130	percent	J/UJ	M	
SY-OBMW12-110723 (MS)	Benzo (g,h,i)perylene	40.5	44 - 128	20 - 128	percent	J/UJ	M	
SY-OBMW12-110723 (SD)	Benzo (g,h,i)perylene	40.7	44 - 128	20 - 128	percent	J/UJ	M	
SY-OBMW12-110723 (MS)	Dibenz (a,h)anthracene	39.4	44 - 131	20 - 131	percent	J/UJ	M	
SY-OBMW12-110723 (SD)	Dibenz (a,h)anthracene	40.7	44 - 131	20 - 131	percent	J/UJ	M	
SY-OBMW12-110723 (MS)	Indeno(1,2,3-c,d)pyrene	41.8	48 - 130	20 - 130	percent	J/UJ	M	
SY-OBMW12-110723 (SD)	Indeno(1,2,3-c,d)pyrene	42.8	48 - 130	20 - 130	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW2-80.5-95.5-110723 SQ6133-8	N	Benzo(a)pyrene	0.19	0.094 UM	0.094 UJ		ug/l	M
SY-BRMW2-80.5-95.5-110723 SQ6133-8	N	Benzo(g,h,i)perylene	0.19	0.094 UM	0.094 UJ		ug/l	M

Qualified Results associated with the MS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW12-110723 SQ6133-3	N	Dibenz(a,h)anthracene	0.19	0.094 UMM	0.094 UJ		ug/l	M
SY-OBMW12-110723 SQ6133-3	N	Indeno(1,2,3-c,d)pyrene	0.19	0.094 UMM	0.094 UJ		ug/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW2-80.5-95.5-110723 (SD)	Acenaphthene	21.4	< 20	< 20	rpd	J/None	D

SY-BRMW2-80.5-95.5-110723 (SD)	Benzo (k)fluoranthene	31.7	< 20	< 20	rpd	J/None	D	
SY-BRMW2-80.5-95.5-110723 (SD)	Chrysene	24.3	< 20	< 20	rpd	J/None	D	
SY-BRMW2-80.5-95.5-110723 (SD)	Dibenz (a,h)anthracene	38.9	< 20	< 20	rpd	J/None	D	
SY-BRMW2-80.5-95.5-110723 (SD)	Indeno(1,2,3-c,d)pyrene	38.5	< 20	< 20	rpd	J/None	D	
SY-BRMW2-80.5-95.5-110723 (SD)	Naphthalene	20.3	< 20	< 20	rpd	J/None	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW2-80.5-95.5-110723 (MS)	2-Methylnaphthalene-d10	102	43 - 92	10 - 92	percent	J/None	I	No Qualifiers Applied
SY-OBMW12-110723 (MS)	2-Methylnaphthalene-d10	100	43 - 92	10 - 92	percent	J/None	I	No Qualifiers Applied
SY-OBMW12-110723 (SD)	2-Methylnaphthalene-d10	95.0	43 - 92	10 - 92	percent	J/None	I	No Qualifiers Applied

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method E300, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345141-1 (LB)	Sulfate	0.0680	< 0.064	< 1	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method RSK175, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345593-1 (LB)	Methane	3.10	< 2.6	< 10	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for RSK175

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW2-252.5-262.5-110723 SQ6133-10	N	Methane	10	3.4 J	10 U		ug/l	L
SY-BRMW2-60.5-70.5-110723 SQ6133-4	N	Methane	10	3.4 J	10 U		ug/l	L
SY-BRMW2-80.5-95.5-110723 SQ6133-8	N	Methane	10	3.4 J	10 U		ug/l	L
SY-OBMW13-110723 SQ6133-7	N	Methane	10	3.2 J	10 U		ug/l	L
SY-OBMW15-110723 SQ6133-5	N	Methane	10	9.1 J	9.1 J	+	ug/l	L
SY-OBMW4R-110723 SQ6133-2	N	Methane	10	4.6 J	10 U		ug/l	L
SY-OBMW5-110723 SQ6133-6	N	Methane	10	3.6 J	10 U		ug/l	L
SY-OBMW6-110723 SQ6133-1	N	Methane	10	3.7 J	10 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260C, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-OBMW12-110723 (MS)	Vinyl chloride	48.2	70 - 130	20 - 130	percent	J/UJ	M	
SY-OBMW12-110723 (SD)	Vinyl chloride	52.2	70 - 130	20 - 130	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW8260C

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW12-110723 SQ6133-3	N	Vinyl chloride	0.10	0.15 MM	0.15 J	-	ug/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: BNASIM		Extraction Method: SW3510C						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW2-80.5-95.5-110723 SQ6133-8	N	Benzo(a)pyrene	0.19	0.094 UM	0.094 UJ		ug/l	M

Table of All Qualified Results

Test Method: SW8260C		Extraction Method: SW5030B						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-OBMW12-110723 SQ6133-3	N	Vinyl chloride	0.10	0.15 MM	0.15 J	-	ug/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method RSK175

FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	ADR Reason	Modified Result	Reason
SY-OBMW12-110723 SQ6133-3	N	Methane	10	17	10 U	L	17	
SY-OBMW14-110723 SQ6133-9	N	Methane	10	18	10 U	L	18	
SY-OBMW15-110723 SQ6133-5	N	Methane	10	9.1 J	10 U	L	9.1 J	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
D	MS RPD
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: A2320B (Alkalinity by Titrimetric Method)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank was not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Although alkalinity was detected in two method blanks, the associated sample results were significantly greater than result found in the blanks, therefore no data were qualified.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS not required per the method.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	No field replicates were submitted with these samples.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•

Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

Review Questions

Method: SW7196A (Chromium, Hexavalent (Colorimetric))				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS not required per the method.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	No field replicates were submitted with these samples.
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported.

Review Questions

Method: SW8260C (Volatile Organic Compounds by GC/MS)

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) SQ6179. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 41 results (12.42%) out of the 330 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
A2320B	No additional comments; see Checklist for detail.
A3500B	The laboratory case narrative indicates the following: "The samples SQ6179-1 and 2 were received by the lab with less than 1 hours left of the method-specified 24-hour holding time for ferrous iron analysis. SQ6179-1 was run 42 minutes out of hold and SQ6179-2 was run 12 minutes out of hold." The samples were analyzed within the 24th hour of the hold time and are considered within hold.
A5310B	No additional comments; see Checklist for detail.
BNASIM	The laboratory case narrative indicates the following: "Samples SQ6179-1 and 4 had low recoveries for the extraction surrogate pyrene-d10 that were outside of the DoD QSM acceptance limits. The client was contacted on 12/11/2023 and the laboratory was instructed to proceed with narration." The data was qualified accordingly during data validation. "Samples SQ6179-2, 6, and 8 had high recoveries for the extraction surrogates 2-methylnaphthalene-d10 that were outside of the DoD QSM acceptance limits. As this would indicate a high bias, and there were no target analytes detected in the samples, no further action was taken." No data were qualified since the associated results were nondetected. "The LCS WG345459-2 had a high recovery for the extraction surrogate 2-methylnaphthalene-d10 that was outside of the DoD QSM acceptance limits. Since the recoveries of the spiked target analytes were acceptable, no further action was taken." Laboratory QC is not qualified during data validation.
E300	No additional comments; see Checklist for detail.
RSK175	The laboratory case narrative indicates the following: "The target analyte methane was detected below 1/2 the LOQ in the method blank WG345654-1. According to the DoD QSM, a method blank is considered to be contaminated if the concentration of any target analyte in the blank exceeds 1/2 the reporting limit and is greater than 1/10 the amount measured in any sample. Since the method blank was acceptable, no further action was taken." The associated methane results were qualified as nondetected during data validation.
SW7196A	The laboratory case narrative indicates the following: "The samples SQ6179-1 and 2 were received by the lab with less than 1 hour left of the method-specified 24-hour holding time for hexavalent chromium analysis. SQ6179-1 was run 41 minutes out of hold and SQ6179-2 was run 11 minutes out of hold." The samples were analyzed within the 24th hour of the hold time and is considered within hold.
SW8260C	No additional comments; see Checklist for detail.

Reviewed by Kevin Kha, Environmental Chemist, EnSafe, Inc.

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Christina Ashdown, Senior Scientist, EnSafe, Inc. February 14, 2024

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method A2320B, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345462-1 (LB)	Alkalinity, Total (as CaCO3)	2.80	< 0.23	< 5	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW5-123-133-110823 (N)	2-Methylnaphthalene-d10	95.6	43 - 92	10 - 92	percent	J/None	I	
SY-BRMW5-29-44-110823 (STD)	Pyrene-d10	50.1	53 - 166	10 - 166	%	J/UJ	I	
SY-OBMW1-110823 (N)	2-Methylnaphthalene-d10	99.7	43 - 92	10 - 92	percent	J/None	I	
SY-OBMW11-110823 (N)	2-Methylnaphthalene-d10	95.6	43 - 92	10 - 92	percent	J/None	I	
SY-OBMW2-110823 (STD)	Pyrene-d10	52.1	53 - 166	10 - 166	%	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method E300, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345207-1 (LB)	Sulfate	0.0680	< 0.064	< 1	mg/l	U/None*	L	
WG346307-1 (LB)	Sulfate	0.110	< 0.064	< 1	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method RSK175, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345654-1 (LB)	Methane	3.10	< 2.6	< 10	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for RSK175

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
SY-BRMW5-56-66-110823 SQ6179-5	N	Methane	10	3.7 J	10 U		ug/l	L
SY-OBMW110-110823 SQ6179-9	FD	Methane	10	5.8 J	5.8 J	+	ug/l	L
SY-OBMW1-110823 SQ6179-2	N	Methane	10	5.5 J	5.5 J	+	ug/l	L
SY-OBMW11-110823 SQ6179-8	N	Methane	10	5.3 J	5.3 J	+	ug/l	L
SY-OBMW2-110823 SQ6179-1	N	Methane	10	3.8 J	10 U		ug/l	L
SY-OBMW3-110823 SQ6179-10	N	Methane	10	3.2 J	10 U		ug/l	L
SY-OBMW8-110823 SQ6179-7	N	Methane	10	6.6 J	6.6 J	+	ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
I	Surrogate recovery outside project limits.
L	Lab Blank
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.

U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias	
-	The result may be biased low
+	The result may be biased high
Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result	

Review Questions

Method: A2320B (Alkalinity by Titrimetric Method)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Although alkalinity was detected in the method blank, the associated sample results were significantly greater than the concentration found in the blank, therefore no data were qualified.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	MS/MSD not reported.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD not reported.
Was the MS/MSD RPD within project acceptance limits?			•	MS/MSD not reported.
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS not required per the method.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			

Review Questions

Method: A2320B (Alkalinity by Titrimetric Method)				
Review Questions	Yes	No	NA	Comment
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported.

Review Questions

Method: A3500B (The Determination of Ferrous Iron, Phenanthroline Method)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Due to method blank contamination, several methane results were qualified as estimated (J) with a high bias (+) or nondetect (U) at the LOQ.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCSD not performed.
Was a MS/MSD pair prepared with each batch?			•	MS/MSD not performed.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD not performed.
Was the MS/MSD RPD within project acceptance limits?	•			A laboratory DUP was performed. DUP RPD was within control criteria.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were surrogate recoveries within project acceptance limits?			•	Surrogates not required for the requested analytes.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			

Review Questions

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported or as qualified during data validation.

Review Questions

Method: SW7196A (Chromium, Hexavalent (Colorimetric))				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP Revision No. 1 Remedial Investigation Former Salvage Yard Former Dow Military Airfield 233 Odlin Road, Bangor, Maine December 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Credere Associates, LLC, Westbrook, ME; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) SQ6238. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 50 results (13.55%) out of the 369 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
A2320B	No additional comments; see Checklist for detail.
A3500B	The laboratory case narrative indicates the following: "The samples SQ6238-1 and 2 were received by the laboratory with less than 15 minutes left of the method-specified 24-hour holding time for ferrous iron analysis. SQ6238-1 was run 32 minutes out of hold and SQ6238-2 was run 27 minutes out of hold." The samples were analyzed within the 24th hour of the hold time and are considered within hold.
A5310B	No additional comments; see Checklist for detail.
BNASIM	The laboratory case narrative indicates the following: "Samples SQ6238-3 and 10 had low recoveries for the extraction surrogates 2-methylnaphthalene-d10 and/or pyrene-d10 that were outside of the DoD QSM acceptance limits. The client was contacted on 12/15/2023 and the laboratory was instructed to proceed with narration." "The LCS WG345531-2 had a high recovery for the extraction surrogate 2-methylnaphthalene-d10 that was outside of the DoD QSM acceptance limits. Since the recoveries of the spiked target analytes were acceptable, no further action was taken."
E300	The laboratory case narrative indicates the following: "The nitrate matrix spike (WG345363-4) on sample SQ6238-1 had a low recovery that was outside of the acceptance limits." The MS %R was within the project acceptance limits of 80-120% and no data was qualified.
RSK175	The laboratory case narrative indicates the following: "The target analyte methane was detected below 1/2 the LOQ in the method blank WG345566-1. According to the DoD QSM, a method blank is considered to be contaminated if the concentration of any target analyte in the blank exceeds 1/2 the reporting limit and is greater than 1/10 the amount measured in any sample. Since the method blank was acceptable, no further action was taken." The associated methane results were qualified as nondetected during data validation.
SW7196A	The laboratory case narrative indicates the following: "The samples SQ6238-1 and 2 were received by the lab with less than 15 minutes left of the method-specified 24-hour holding time for hexavalent chromium analysis. SQ6238-1 was run 26 minutes out of hold and SQ6238-2 was run 21 minutes out of hold." The samples were analyzed within the 24th hour of the hold time and is considered within hold.
SW8260C	The laboratory case narrative indicates the following: "Samples SQ6238-1, 6, and 7 were manually integrated for the target analytes trichloroethane, trans-1,2-dichloroethene and/or the surrogate 1,2-dichloroethane-D4. The specific reasons for the manual integrations are indicated on the raw data by the manual integration codes (M1-M11). These codes are further explained in the attachment following this narrative." Manual integrations were not reviewed in Stage 2A validation and no data were qualified.

January 23, 2024

Reviewed by Kevin Kha, Environmental Chemist, EnSafe, Inc.

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Christina Ashdown, Senior Scientist, EnSafe, Inc. February 14, 2024

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method A2320B, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345760-1 (LB)	Alkalinity, Total (as CaCO3)	2.40	< 0.23	< 5	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW10-65-75-110923 (N)	Benzo (b)fluoranthene	0.200	< 0.19	< 0.19	ug/l	J/UJ	D3	
SY-BRMW10-65-75-110923 (N)	Benzo (k)fluoranthene	0.220	< 0.19	< 0.19	ug/l	J/UJ	D3	
SY-BRMW10-65-75-110923 (N)	Chrysene	0.230	< 0.19	< 0.19	ug/l	J/UJ	D3	
SY-BRMW10-65-75-110923 (N)	Fluoranthene	0.270	< 0.19	< 0.19	ug/l	J/UJ	D3	
SY-BRMW10-65-75-110923 (N)	Pyrene	0.270	< 0.19	< 0.19	ug/l	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
SY-BRMW10-65-75-110923 (FD)	Pyrene-d10	48.4	53 - 166	10 - 166	percent	J/UJ	I	
SY-BRMW4-138-148-110923 (STD)	2-Methylnaphthalene-d10	41.7	43 - 92	10 - 92	percent	J/UJ	I	
SY-BRMW4-138-148-110923 (N)	Pyrene-d10	46.6	53 - 166	10 - 166	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method E300, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345363-1 (LB)	Sulfate	0.0890	< 0.064	< 1	mg/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method RSK175, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG345566-1 (LB)	Methane	4.70	< 2.6	< 10	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Lab Blank for RSK175

SY-BRMW4-62-72-110923 SQ6238-1	N	Hexavalent Chromium	0.025	0.0035 J	0.025 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method BNASIM

FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	ADR Reason	Modified Result	Reason

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
D3	Field Duplicate RPD
I	Surrogate recovery outside project limits.
L	Lab Blank

Reason Code Definitions

Code	Definition
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: A2320B (Alkalinity by Titrimetric Method)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	Only water samples were collected.
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		Although alkalinity was detected in the method blank, the associated sample results were significantly greater than the concentration found in the blank, therefore no data were qualified.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			MSD not performed. A laboratory DUP was performed and DUP RPD was within control criteria.
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS not required per the method.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			

Review Questions

Method: A2320B (Alkalinity by Titrimetric Method)				
Review Questions	Yes	No	NA	Comment
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported.

Review Questions

Method: A3500B (The Determination of Ferrous Iron, Phenanthroline Method)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		No discrepancies were noted between the COC and the samples received.
Were there discrepancies between the COC and the sample labels?		•		No discrepancies were noted between the COC and the sample labels.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			Although the laboratory case narrative indicated 2 samples were analyzed outside of the 24-hour holding time, the samples were analyzed within the 24th hour and are considered within hold.
Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	MS/MSD not reported.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD not reported.
Was the MS/MSD RPD within project acceptance limits?	•			A laboratory DUP was performed and DUP RPD was within control criteria.
Were Post Spike (PS) recoveries within project acceptance limits?			•	PS not required per the method.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		All data is acceptable as reported.

Were trip blanks analyzed at the proper frequency and in control?			•	Trip blank not analyzed for this method.
Were field blanks analyzed at the proper frequency and in control?			•	No field blanks were submitted with these samples.
Were equipment blanks analyzed at the proper frequency and in control?			•	No equipment blanks were submitted with these samples.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCSD not performed.
Was a MS/MSD pair prepared with each batch?			•	MS/MSD not reported.
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD not reported.
Was the MS/MSD RPD within project acceptance limits?			•	MS/MSD not reported.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	ISM not performed.
Were surrogate recoveries within project acceptance limits?		•		Due to surrogate %R below criteria, samples SY-BRMW10-65-75-110923 and SY-BRMW4-138-148-110923 were qualified as nondetect estimated (UJ) and one chrysene result was qualified as estimated with a low bias (J-).
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		Several PAH results for samples SY-BRMW1-65-75-110923 and SY-BRMW10-65-75-110923 were qualified by FUDSChem ADR because one result was non-detect and one was detected. When the LOD was used in absolute difference calculation for the non-detect result, the difference was less then than 1X the LOQ; therefore, these qualifiers were removed during data validation.

Review Questions

QA objectives for measuring data are expressed in terms of precision, accuracy, representativeness, comparability, completeness, and sensitivity (PARCCS). The QA objectives provide a mechanism for ongoing control and evaluating and measuring data quality throughout the project.

A review of the collected data is necessary in order to identify if data measurement objectives established in the seven-step data quality objective (DQO) process have been met. In general, the following data measurement objectives were considered:

•Specification of particular analytical method and reporting detection limit requirements
•Identification of the appropriate laboratory analytical QC requirements
•Verify if appropriate levels of other PARCCS criteria for the data has been met
•Delineation of specific sample-handling issues or other project-specific issues

The data validation review of the QA objectives verifies if the collected data are of sufficient quality to support their intended use.

A total of 15 results (0.18 %) out of the 8329 results (sample and field QC samples) reported have had qualifiers modified during this Data Usability Assessment and 15 results (0.18 %) have been rejected or deemed a serious deficiency. 613 results were qualified during the data review process. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D3	Field Duplicate RPD
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V4	Sample Receipt Condition
Z	LCS RPD

Flag Code and Definitions

Flag	Definition
J	Estimated Value
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Data Usability Summary

Sample Type Code and Definitions

Type	Definition
BD	Blank Spike Duplicate
BS	Blank Spike
FD	Field Duplicate
LB	Laboratory Blank
LR	Laboratory Replicate
MS	Matrix Spike
N	Normal
SD	Matrix Spike Duplicate
TB	Trip Blank

Data Usability Summary

Narrative Comments

Review Questions	Yes	No	NA	Comment
Review Objective/Sampling Design				
Is the Final UFP QAPP associated with the event present in the Planning folder of the FUDSChem library for the project?	•			Loaded to FUDSChem as "Dow_Salvage-Yard_QAPP_FINAL_9-18-2019_W912WJ-18-C-0019, Credere Associates, LLC, 2019-09-18"
Were key outputs defined during systematic planning (e.g.,PQOs or DQOs and MPCs) reviewed to make sure they are still applicable? Refer to the UFP QAPP for the projects, and to the worksheets found in REPORTS | UFP QAPP Worksheets.	•			
Refer to summary reports found in REPORTS | Event Tracking Reports | Event Status: All Data Types, Event Status: Chemistry Detail, and Unplanned Samples to review planned and unplanned samples and test methods.	•			All locations planned to be sampled have associated data and are highlighted green. Unplanned samples lists only trip blanks.
Was the sampling design reviewed for consistency with stated objectives? Refer to MAPS | Export to Google Earth to review sampling locations.	•			
Were data quality indicators (DQIs) from the DoD QSM used for this event? Review and discuss any DQIs that deviated from the DoD QSM. Refer to the UFP QAPP and to REPORTS | Environmental Setup Reports | Analyte Criteria, which highlights items that were modified from the original templates based on the DoD QSM.	•			All methods were completed under QSM. In a few instances samples that failed QC were not reextracted due to being well outside hold time or having no further volume. In all cases, the reextraction/analysis outside hold time would result in the same qualification or additional qualification. In these instances, the data were narrated in the lab reports, qualified accordingly during validation, and reviewed during the DUA. Data usability was not considered impacted.
Review Data				
If Event Planning was performed in FUDSChem, were all samples and measurements identified in REPORTS | Event Tracking Reports | Event Status: All Data Types completed and approved (all checked cells are green)?	•			LTD is pending approval and we are still working through a way to add the GWD for each port considering the way the FLUTe construction details were entered. But all lab, EMI, WCI, WINT, and LDI updates needed have been loaded and approved.
If Event Planning was performed in FUDSChem, were all samples identified in REPORTS | Event Tracking Reports | Event Status: Chemistry Detail collected and approved (all checked cells are green), or notated to explain discrepancies?	•			All are green
If Event Planning was performed in FUDSChem, were all samples identified in REPORTS | Event Tracking Reports | Unplanned Samples reviewed to ensure correct completeness calculations?	•			Only trip blanks are listed as unplanned samples
Were deviations from planned activities (e.g., number and locations of samples, holding time exceedances, damaged samples, non-compliant PT sample results, and SOP deviations) reviewed to determine their impacts on the data usability? If Event Planning was performed in FUDSChem, refer to REPORTS | Data Usability Assessment Reports | Project Completeness.	•			Field completeness is 100% . Analytical completeness is 99.8%; therefore, the overall completeness meets the goal of 95%.
Have all Location related placeholders, such as centroid coordinates, been resolved? Review REPORTS | Data Assessment Reports | Locations.	•			

Data Usability Summary

Review Questions	Yes	No	NA	Comment
Review Data				
Were laboratory and data review reports for each Sample Delivery Group (SDG) associated with the event present in the FUDSChem library for the project? Refer to the list of SDGs listed on the cover page of the Data Usability Assessment Summary Report found under REPORTS | Data Usability Assessment Reports.	•			
Were all data review reports reviewed? Look for patterns, trends, and anomalies (e.g., unexpected results). Refer to the Data Review Reports in the project library as well as the event summary reports located in REPORTS | Data Usability Assessment Reports.	•			See text in Q1 November 2023 Field report. Generally, normal trends in qualifications for blank detections or %R nonconformance.
Were all data review reports associated with an approved eQAPP? Review the footer of the Data Review report in the Library to identify the version of the eQAPP that was used.	•			eQAPP_USNAE-D01ME0004-07-RIFS.106740
Were there any implications of unacceptable QC sample results and does this impact sample results? If so, did any qualifiers require revision using the Sample Qualification tab of this interface?	•			Several X qualifiers changed to R.
Were sensitivity requirements met, as compared to regulatory Project Action or Screening Limits? Review REPORTS | Data Usability Assessment Reports | Sensitivity Summary.		•		Benzo(a)anthracene, dibenzo(a,h)anthracene, naphthalene in all samples analyzed by PAH SIM exceeded the PAL; however, these were anticipated in the QAPP and are already analyzed by SIM.
Were any sample results recommended for rejection during validation (X qualified)? If so, have all X qualifiers been revised to R or J using the Sample Qualification tab of this interface?	•			Several PCB aroclors were rejected for sample SY-OBMW4R-110723 due to a low surrogate as a result of spilled sample in the lab. EPH C9-C18 aliphatics in sample SY-BRMW10-65-75-110923 and benzoic acid in several samples were rejected due to LCS or LCSD %R below the lower rejection limit.
Were all LTM related parameters required for the project, such as groundwater measurements, environmental parameters, and well screen intervals found to be complete and correctly reported?	•			GWD is still pending a way to load for each interval.
Have all sections of the Dashboard linked Project Tracking Report been documented as complete?		•		Field parameters are still pending per comments above. (GWD issue)
Document Usability/Draw Conclusions				
Based on the previous 'Review Data' documentation, are there any limitations on the use of the data associated with this event?		•		
Describe the conclusions reached during this Data Usability Assessment.	•			Considering the results of this report, the data collected as part of the November 2023 sampling event (Q1) are usable for making project decisions relative to the established objectives.
Lessons Learned/Recommendations				
Were any Program level Lessons Learned identified? (e.g., SW8330 was not the best fit for this site and MS/MS should be considered)	•			Analysis of the CVOC list of VOCs by SIM has resulted in detection of additional CVOC analytes at additional wells. This additional method has added value to the program results.
Were any Project level Lessons Learned identified? (e.g., ISM sampling resulted in anomalies to be resolved in the future, or current locations not comparable to historical data)		•		
Are there any additional items associated with this sampling event that need clarification?		•		

Data Usability Summary

Review Questions	Yes	No	NA	Comment
Lessons Learned/Recommendations				
Were any Sample level Lessons Learned identified? (e.g., a particular well may be expected to be dry in the future)		•
