Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Receipt
The samples were received on 6/13/2019 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.3º C and 2.5º C.

GC/MS VOA
Method(s) 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following samples were diluted due to the nature of the sample matrix: 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: The following samples required a dilution due to the nature of the sample matrix: 8ALC (480-154821-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: 8BLC (480-154821-2) and 8CLC (480-154821-3). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL 480-479249/22 and CCVL 480-479249/32) associated with batch 480-479249, contained Total Chromium and Zinc above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples (LCS 480-477677/2-A) and (MB 480-477677/1-A) was not performed.

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL 480-479425/38) associated with batch 480-479425, contained Total Potassium above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3) was not performed.

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL 480-479249/44) associated with batch 480-479249, contained Total Zinc above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples 8ALC (480-154821-1) and 8BLC (480-154821-2) was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3). The reporting limits (RLs) have been adjusted proportionately.

Method(s) 310.2: The following samples were diluted due to the nature of the sample matrix: 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3). Elevated reporting limits (RLs) are provided.

Method(s) 9251: The following samples were diluted due to the nature of the sample matrix: 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3). Elevated reporting limits (RLs) are provided.

Method(s) Distill/Ammonia: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) 3510C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 8ALC (480-154821-1), 8BLC (480-154821-2) and 8CLC (480-154821-3). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-154821-1
Project/Site: Crossroads ME-Ann Leachate -3pts

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

RE: Katahdin Lab Number: SM5886
Project ID: Waste Management - Crossroads
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): June 13, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Receipt
The samples were received on 6/13/2019 9:00 AM and 6/14/2019 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.8º C and 3.2º C.

GC/MS VOA
Method(s) 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: 12LD (480-154852-3) and 10ABLD (480-154852-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following sample was diluted due to the nature of the sample matrix: 9ABCLD (480-154852-6). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: 11ABCLD (480-154852-2), 12LD (480-154852-3) and 10ABLD (480-154852-4). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The Total Manganese results reported for the following sample do not concur with results previously reported for this site: 45SD (480-154927-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL) associated with batch 480-479249 contained Total Chromium and Zinc above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples was not performed. (LCS 480-477677/2-A) and (MB 480-477677/1-A)

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL) associated with batch 480-479249 contained Total Zinc above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples 11ABCLD (480-154852-2), 12LD (480-154852-3), 10ABLD (480-154852-4), 7LD (480-154852-5) and 9ABCLD (480-154852-6) was not performed.

Method(s) 6010C: The results reported for Total Iron for the following sample do not concur with results previously reported for this site: 12LD (480-154852-3). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The results reported for Total Iron and Manganese for the following sample do not concur with results previously reported for this site: 7LD (480-154852-5). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The results reported for Total Cobalt and Iron for the following sample do not concur with results previously reported for this site: 9ABCLD (480-154852-6). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 11ABCLD (480-154852-2), 12LD (480-154852-3), 7LD (480-154852-5) and 9ABCLD (480-154852-6). The reporting limits (RLs) have

Job ID: 480-154852-1 (Continued)

Laboratory: Eurofins TestAmerica, Buffalo (Continued)

been adjusted proportionately.

Method(s) SM 2540C: The analysis volume selected for the following sample produced a base result greater than 200mg before calculation of the final result: 10ABLD (480-154852-4). The reference method specifies that no more than 200mg of weight be recovered for a chosen sample analysis volume in order to produce the best data precision. Reanalysis was performed outside of holding time resulting in an over residue limit once again. Therefore, the original data have been qualified and reported..

Method(s) 353.2: The results reported for the following samples do not concur with results previously reported for this site: 12ABLD (480-154852-1), 12LD (480-154852-3), 10ABLD (480-154852-4), 7LD (480-154852-5) and 9ABCLD (480-154852-6). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 5310C: The results reported for the following sample do not concur with results previously reported for this site: 10ABLD (480-154852-4). Reanalysis was performed, and the result(s) confirmed.

Method(s) Distill/Ammonia: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: 12LD (480-154852-3). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Waste Management
Job ID: 480-154852-1
Project/Site: Crossroads ME-Ann Underdrain

Laboratory: Eurofins TestAmerica, Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
Maine	State Program	1	NY00044	12-04-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
9038		Leachate	Sulfate
9251		Leachate	Chloride
Field Sampling		Leachate	Field EH/ORP
Field Sampling		Leachate	Field pH
Field Sampling		Leachate	Oxygen, Dissolved
Field Sampling		Leachate	Specific Conductance
Field Sampling		Leachate	Temperature
Field Sampling		Leachate	Turbidity

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-154852-1
Project/Site: Crossroads ME-Ann Underdrain

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Analyte	Matrix	Prep Type	Unit	Client RL	Lab PQL
6010C	Aluminum	Leachate	Total/NA	mg/L	0.080	0.20

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	QC Results not within control limits
U	Not Detected above the associated Quantitaion Limit

Metals

Qualifier	Qualifier Description
BL	Compound is found in the associated method blank as well as inorganic sample.
U	Not Detected above the associated Quantitaion Limit

General Chemistry

Qualifier	Qualifier Description
U	Not Detected above the associated Quantitaion Limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Receipt
The samples were received on 6/14/2019 9:00 AM and 6/15/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.6º C and 2.6º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 480-478054 recovered above the upper control limit for Tetrachloroethene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: Garage (480-154910-1) and TOTMAN (480-154910-3).

Method(s) 8260C: The laboratory control sample (LCS) for analytical batch 480-478054 recovered outside control limits for the following analyte: Tetrachloroethene. This analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.The following samples are impacted: Garage (480-154910-1) and TOTMAN (480-154910-3).

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 480-478467 recovered outside acceptance criteria, low biased, for 2-Hexanone, 4-Methyl-2-pentanone, and 2-Butanone. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The method blank for preparation batch 480-478126 and analytical batch 480-478540 contained Total Iron above the client reporting limit. This target analyte concentration was less than the laboratory's standard reporting limit (RL); therefore, re-extraction and/or re-analysis of samples New Office (480-154949-3) was not performed.

Method(s) 6010C: The Total Iron results reported for the following sample do not concur with results previously reported for this site: Garage (480-154910-1). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 410.4: The Chemical Oxygen Demand results reported for the following sample do not concur with results previously reported for this site: New Office (480-154949-3). Reanalysis was performed, and the result(s) confirmed.

Method(s) 9251: The laboratory control sample (LCS) for analytical batch 480-481257 recovered outside control limits for the following analytes: Chloride. These analytes were biased high in the LCS and were not detected above reporting limits (RL) in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-154910-1
Project/Site: Crossroads ME-Ann DW Garage, Office,etc

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

M1 Matrix spike recovery is outside the laboratory's acceptance range indicating potential sample matrix interference and potential bias of reported value for this parameter.

M2 Matrix spike recovery is outside the laboratory's acceptance range. The spike concentration is significantly below the sample concentration and cannot be distinguished from the sample signal.

3 Matrix spike analysis cannot be quantified due to severe matrix interferences.

R1 Precision of replicate analysis as measured by RPD is outside the laboratory's acceptance range for this parameter. Sample homogeneity may be a factor.

5 Because of the large uncertainty associated with measurements made near the detection level, there is no acceptance range for relative percent difference.

Receipt
The samples were received on 6/14/2019 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.4° C.

GC/MS VOA
Method(s) 8260C: The following sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: TANK (480-154925-1). The sample was analyzed within 7 days per EPA recommendation.

Method(s) 8260C: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: TANK (480-154925-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following sample was diluted due to the nature of the sample matrix: TANK (480-154925-1). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: TANK (480-154925-1). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8081B: The following sample was diluted due to the nature of the sample matrix: TANK (480-154925-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 1631E: The following sample was diluted due to the nature of the sample matrix: TANK (480-154925-1). Elevated reporting limits (RLs) are provided. Additional Bromine Monochloride was added

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) SM 4500 Cl G: The following samples were diluted due to color: TANK (480-154925-1) and (480-154925-N-1 DU ^5). Elevated reporting limits (RL) are provided.

Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: TANK (480-154925-1). The reporting limits (RLs) have been adjusted proportionately.

Method(s) Distill/Ammonia: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: TANK (480-154925-1). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-154925-1
Project/Site: Crossroads ME-Annual Leachate Tank

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Analyte	Matrix	Prep Type	Unit	Client RL	Lab PQL

RE: Katahdin Lab Number: SM5950
Project ID: Waste Management Crossroads
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): June 13, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

Narrative

Job Narrative
480-155237-1

Comments
This report have been revised to include a narrative comment for missed Nitrate hold times.

Receipt
The samples were received on 6/18/2019 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3º C.

GC/MS VOA
Method(s) 8260C: The laboratory control sample (LCS) for analytical batch 480-479125 recovered outside control limits for the following analytes: Tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The following sample is impacted:TB (480-155237-2).

Method(s) 8260C: The laboratory control sample (LCS) for analytical batch 480-479185 recovered outside control limits for the following analytes: Tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The following samples are impacted: 8BCWD (480-155237-1).

Method(s) 8260C: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: 8BCWD (480-155237-1). The sample(s) were analyzed within 7 days per EPA recommendation.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 480-479419/21)recovered above the upper control limits for Total Iron and Chromium. The samples associated with this CCVL were either less than the reporting limit (RL) for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples (LCS 480-479057/2-A) and (MB 480-479057/1-A) was not performed.

Method(s) 6010C: The Total Arsenic and Iron results reported for the following sample do not concur with results previously reported for this site: 8BCWD (480-155237-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The results reported for Dissolved Arsenic and Iron for the following sample do not concur with results previously reported for this site: 8BCWD (480-155237-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6020A: The method blank for preparation batch 480-479060 contained Total Silver above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of sample 8BCWD (480-155237-1) were not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 353.2: The following sample was analyzed outside of analytical holding time due to laboratory error: 8BCWD (480-155237-1).

Method(s) 9251: The method blank for analytical batch 480-480648 contained Chloride above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank. 8BCWD (480-155237-1)

Method(s) 9038: The results reported for the following sample do not concur with results previously reported for this site: 8BCWD (480-155237-1). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-155237-1
Project/Site: Crossroads ME-Wick Drain

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method(s) 6010C: The Total Arsenic and Magnesium results reported for the following sample do not concur with results previously reported for this site: 620A (480-158419-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Arsenic, Barium, Calcium, Iron, Magnesium, and Potassium results reported for the following sample do not concur with results previously reported for this site: 618CR (480-158419-2). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6020A: The continuing calibration verification (CCV) associated with batch 680-586051 recovered above the upper control limit for Aluminum. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 6020A: The interference check standard solution (ICSA) associated with the following samples showed results for cobalt at a level greater than the reporting limit (RL). It is believed that the solution contains trace impurities of this element / these elements and the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution. (680-173837-C-2-A), (680-173837-C-2-B MS), (680-173837-C-2-C MSD), (680-173837-C-2-A PDS) and (680-173837-C-2-A SD ^5)

Method(s) 6020A: The results reported for the following sample do not concur with results previously reported for this site: 628A (480-157389-5). Reanalysis of the undigested sample was performed, and the result(s) confirmed.

Method(s) 6020A: The results reported for the following sample do not concur with results previously reported for this site: 106WR

(480-157389-3). Reanalysis of the undigested sample was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method(s) 350.1: The results reported for the following sample do not concur with results previously reported for this site: W11-3E (480-157195-3) and DUP-GW-01 (480-157327-6). Reanalysis was performed, and the result(s) confirmed.

Method(s) 353.2: The results reported for the following sample do not concur with results previously reported for this site: W11-6E (480-157195-6) and 626B (480-158314-3). Reanalysis was performed, and the result(s) confirmed.

Method(s) 9038: The results reported for the following samples do not concur with results previously reported for this site: W12-4E (480-157259-4), 629B (480-157389-6), DUP-GW-02 (480-157389-8) and TRANS (480-157453-3). Reanalysis was performed, and the results confirmed.

Method(s) 9251: The results reported for the following sample do not concur with results previously reported for this site: 107BR (480-157453-1) and 629B (480-157389-6). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 2540D: Reanalysis of the following samples were performed outside of the analytical holding time to confirm the original analysis : 106DR (480-157389-2), 629B (480-157389-6), 629E (480-157389-7), 107BR (480-157453-1) and 107CR (480-157453-2). Results do not confirm, both sets of data have been reported.

Method(s) SM 2540C: Reanalysis of the following samples were performed outside of the analytical holding time to confirm the original result : W11-4E (480-157195-4), W11-5B (480-157195-7), 310D (480-157992-2) and 1134B (480-158239-2). Results do not confirm, both sets of data have been reported.

Method(s) SM 5310C: The results reported for the following sample do not concur with results previously reported for this site: 107BR (480-157453-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 2540C: The Total Dissolved Solids results reported for the following sample do not concur with results previously reported for this site: 107BR (480-157453-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 2540D: The Total Suspended Solids results reported for the following sample do not concur with results previously reported for this site: 1008ER2 (480-157906-2). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 2540C: The Total Dissolved Solids results reported for the following sample does not concur with results previously reported for this site: 628A (480-157389-5). Reanalysis was performed, and the result confirmed.

Method(s) SM 2540C: The following samples were analyzed outside of analytical holding time due to laboratory error: 104C (480-157327-2), 104D (480-157327-3), 630B (480-157327-4), 630E (480-157327-5) and DUP-GW-01 (480-157327-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Project/Site: Crossroads ME-SA GW

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

RE: Katahdin Lab Number: SM8341
Project ID: Waste Management - Crossroads
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): August 09, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Qualifiers

Metals

Qualifier	Qualifier Description
U	Not Detected above the associated Quantitaion Limit

General Chemistry

Qualifier	Qualifier Description
*	QC Results not within control limits
U	Not Detected above the associated Quantitaion Limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Receipt
The samples were received on 8/23/2019 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 3.3º C, 3.4º C, 3.6º C and 4.0º C.

Metals
Method(s) 6010C: The Total Iron result reported for the following sample did not concur with results previously reported for this site: SW-B (480-158077-10). Reanalysis was performed, and the result confirmed.

Method(s) 6010C: The Total Sodium results reported for the following samples do not concur with results previously reported for this site: SW-101 (480-158077-2) and SW-C (480-158077-11). Reanalysis was performed, and the results confirmed.

Method(s) 6010C: The Total Calcium and Magnesium results reported for the following sample do not concur with results previously reported for this site: SW-201 (480-158077-4). Reanalysis was performed, and the results confirmed.

Method(s) 6010C: The Total Calcium, Magnesium, and Sodium results reported for the following sample do not concur with results previously reported for this site: SW-203 (480-158077-5). Reanalysis was performed, and the results confirmed.

Method(s) 6010C: The Total Calcium, Magnesium, Potassium, and Sodium results reported for the following sample do not concur with results previously reported for this site: SW-801 (480-158077-7). Reanalysis was performed, and the results confirmed.

Method(s) 6020A: The Total Lead results reported for the following sample do not concur with results previously reported for this site: SW-B (480-158077-10). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) SM 2540C: The results reported for the following sample do not concur with results previously reported for this site: SW-C (480-158077-11). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 2540D: The Total Suspended Solids results reported for the following sample do not concur with results previously reported for this site: SW-B (480-158077-10). Reanalysis was performed, and the result(s) confirmed. Both sets of data are reported.

Method(s) 310.2: The Alkalinity, Total results reported for the following samples do not concur with results previously reported for this site: SW-102 (480-158077-3), SW-201 (480-158077-4), SW-801 (480-158077-7), SW-A (480-158077-9) and SW-B (480-158077-10). Reanalysis was performed, and the result(s) confirmed.

Method(s) 353.2: The results reported for the following sample do not concur with results previously reported for this site: SW-A (480-158077-9). Reanalysis was performed, and the result(s) confirmed.

Method(s) 410.4: The Chemical Oxygen Demand results reported for the following samples do not concur with results previously reported for this site: SW-101 (480-158077-2), SW-102 (480-158077-3), SW-B (480-158077-10) and SW-C (480-158077-11). Reanalysis was performed, and the results confirmed.

Method(s) SM 5310C: The results reported for the following samples do not concur with results previously reported for this site: SW-102 (480-158077-3), SW-203 (480-158077-5), SW-9 (480-158077-8), SW-B (480-158077-10) and SW-C (480-158077-11). Reanalysis was performed, and the result(s) confirmed.

Method(s) 9251, SM 4500 Cl- E: The Chloride, Dissolved results reported for the following samples do not concur with results previously reported for this site: SW-801 (480-158077-7), SW-9 (480-158077-8) and SW-C (480-158077-11). Reanalysis was performed, and the

Accreditation/Certification Summary

Client: Waste Management
Job ID: 480-158077-1
Project/Site: Crossroads ME-SA Surface Water

Laboratory: Eurofins TestAmerica, Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Maine	State Program	NY00044	12-04-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
9038		Surface Water	Sulfate
9251		Surface Water	Chloride
Field Sampling		Surface Water	Depth to Water from Top of Casing
Field Sampling		Surface Water	Field EH/ORP
Field Sampling		Surface Water	Field pH
Field Sampling		Surface Water	Flow
Field Sampling		Surface Water	Oxygen, Dissolved
Field Sampling		Surface Water	Specific Conductance
Field Sampling		Surface Water	Temperature
Field Sampling		Surface Water	Turbidity

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-158077-1
Project/Site: Crossroads ME-SA Surface Water

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Receipt
The samples were received on 8/29/2019 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.4° C.

GC/MS VOA
Method(s) 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: 8ALC (480-158312-1), (480-158312-I-1 MS), (480-158312-I-1 MSD), 8BLC (480-158312-2) and 8CLC (480-158312-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: 8ALC (480-158312-1), (480-158312-I-1 MS) and (480-158312-I-1 MSD).The samples were analyzed within 7 days per EPA recommendation.

Method(s) 8260C: The laboratory control sample (LCS) for analytical batch 480-490788 recovered outside control limits for the following analytes: Chloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The following samples are impacted: 8BLC (480-158312-2), 8CLC (480-158312-3) and TB (480-158312-4).

Method(s) 8260C: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following samples were analyzed after 7 days from sampling: 8BLC (480-158312-2) and 8CLC (480-158312-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 480-490301/54) recovered above the upper control limit for Total Potassium. The samples associated with this CCVL were either less than the reporting limit (RL) for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples 8ALC (480-158312-1), 8BLC (480-158312-2) and 8CLC (480-158312-3) was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 8ALC (480-158312-1), 8BLC (480-158312-2) and 8CLC (480-158312-3). The reporting limits (RLs) have been adjusted proportionately.

Method(s) Distill/Ammonia: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 8ALC (480-158312-1), 8BLC (480-158312-2) and 8CLC (480-158312-3). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-158312-1
Project/Site: Crossroads ME-SA 8ALC/BLC/CLC

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Comments
No additional comments.

Receipt
The samples were received on 8/29/2019 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7º C.

GC/MS VOA
Method(s) 8260C: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: TANK (480-158313-1). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: TANK (480-158313-1).

Method(s) 8260C: The results reported for the following sample do not concur with results previously reported for this site: TB (480-158313-2). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following sample was diluted due to the nature of the sample matrix: TANK (480-158313-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: TANK (480-158313-1). The reporting limits (RLs) have been adjusted proportionately.

Method(s) Distill/Ammonia: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: TANK (480-158313-1). The reporting limits (RLs) have been adjusted proportionately.

Method(s) 9012B: Reanalysis of the following sample was performed outside of the analytical holding time due to failure of quality control samples in the original analysis : TANK (480-158313-1). Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) 3510C: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: TANK (480-158313-1). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-158313-1
Project/Site: Crossroads ME-SA Leachate Tank

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

RE: Katahdin Lab Number: SM9028
Project ID: Waste Management - Crossroads
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): August 28, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Receipt
The sample was received on 8/31/2019 9:00 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0º C.

GC/MS VOA
Method(s) 8260C: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: 8BCWD (480-158430-1). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The results reported for the following samples do not concur with results previously reported for this site: 8BCWD (480-158430-1). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The method blank for preparation batch 480-490558 and 480-491115 and analytical batch 480-491313 contained Dissolved Sodium above the reporting limit (RL). Associated sample 8BCWD (480-158430-1) was not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method(s) 6010C: The Dissolved Arsenic and Iron results reported for the following sample do not concur with results previously reported for this site: 8BCWD (480-158430-1). Reanalysis was performed, and the results confirmed.

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL) associated with batch 480-491633 contained Total Arsenic above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples 8BCWD (480-158430-1) and (MB 480-490992/1-A) was not performed.

Method(s) 6010C: The method blank for preparation batch 480-490992 and analytical batch 480-491633 contained Total Iron above the reporting limit (RL). Associated sample(s) 8BCWD (480-158430-1) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method(s) 7470A: The following samples for metals were received unpreserved and were preserved upon receipt to the laboratory: 8BCWD (480-158430-1). Regulatory documents require a 24-hour waiting period from the time of the addition of the acid preservative to the time of digestion. preserved 9/12/19 at 1740 2nd check 9/16/19 at 1050 pH < 2 BB

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 353.2: The results reported for the following sample do not concur with results previously reported for this site: 8BCWD (480-158430-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) Distill/Ammonia: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: 8BCWD (480-158430-1). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-158430-1
Project/Site: Crossroads ME-Wick Drain

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

The dissolved metals were unable to be field filtered. Could Test America please filter unpreserved sample for metals? And due to a miscommunication, no other metals bottles were filled. Please use other unpreserved volume for total metals analysis. Please use this chain as a reference point but log-in samples with the correct required analyses based on the bottle order sheets that I don't currently have in front of me.

Qualifiers

Metals

Qualifier	Qualifier Description
BL	Compound is found in the associated method blank as well as inorganic sample.
U	Not Detected above the associated Quantitaion Limit

General Chemistry

Qualifier	Qualifier Description
*	QC Results not within control limits
U	Not Detected above the associated Quantitaion Limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Receipt
The samples were received on 11/8/2019 10:00 AM, 11/9/2019 10:00 AM, 11/12/2019 10:00 AM, 11/13/2019 9:30 AM, 11/14/2019 10:00 AM, 11/15/2019 11:30 AM, 11/19/2019 10:00 AM, 11/20/2019 9:45 AM, 11/21/2019 9:45 AM, 11/26/2019 10:00 AM, 12/11/2019 10:00 AM and 12/20/2019 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 16 coolers at receipt time were 1.4º C, 2.5º C, 2.6º C, 2.6º C, 2.6º C, 2.7º C, 2.7º C, 2.9º C, 2.9º C, 3.0º C, 3.0º C, 3.1º C, 3.2º C, 3.2º C, 3.4º C and 3.5º C.

Metals
Method 6010C: The Total Barium, Iron, and Calcium results reported for the following sample do not concur with results previously reported for this site: 620A (480-162327-1). Reanalysis was performed, and the result(s) confirmed.

Method 6010C: The Total Manganese results reported for the following sample do not concur with results previously reported for this site: 629B (480-162327-4). Reanalysis was performed, and the result(s) confirmed.

Method 6010C: The Total Sodium result reported for the following sample did not concur with results previously reported for this site: 107BR (480-162641-2). Reanalysis was performed, and the result confirmed.

Method 6010C: The Total Iron result reported for the following sample did not concur with results previously reported for this site: W11-3E (480-162730-2). Reanalysis was performed, and the result confirmed.

Method 6010C: The low level continuing calibration verification (CCVL 480-507461/25) recovered above the upper control limit for Total Copper. The samples associated with this CCVL were either less than the reporting limit (RL) for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples (LCS 480-505722/2-A) and (MB 480-505722/1-A) was not performed.

Method 6010C: The low level continuing calibration verification (CCVL 480-507461/49) recovered above the upper control limit for Total Copper. The samples associated with this CCVL were either less than the reporting limit (RL) for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples 626B (480-162953-1) and TRANS (480-162953-3) was not performed.

Method 6010C: The continuing calibration verification (CCV 480-507461/54) recovered above the upper control limits for Total Chromium and Vanadium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: TRANS (480-162953-3).

Method 6010C: The low level continuing calibration verification (CCVL 480-507461/56) recovered above the upper control limit for Total Copper. The sample associated with this CCVL were either less than the reporting limit (RL) for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples TRANS (480-162953-3) was not performed.

Method 6010C: The method blank for preparation batch 480-506213 and analytical batch 480-506777 contained Total Potassium above the client detection limit. This target analyte concentration was less than the laboratory's standard reporting limit (RL); therefore, re-extraction and/or re-analysis of sample W12-4B (480-163033-1) and W12-3E (480-163033-2) was not performed.

Method 6010C: The Total Calcium and Magnesium results reported for the following sample do not concur with results previously reported for this site: 626B (480-162953-1). Reanalysis was performed, and the results confirmed.

Method 6010C: The Total Iron and Sodium results reported for the following sample did not concur with results previously reported for this site: W12-1E (480-163285-1). Reanalysis was performed, and the result confirmed.

Method 6010C: The results reported for Total Iron and Sodium for the following sample do not concur with results previously reported for

this site: W12-5E (480-163965-8). Reanalysis was performed, and the result(s) confirmed.

Method 6010C: The Total Iron result reported for the following sample did not concur with results previously reported for this site: W12-2E (480-164496-2). Reanalysis was performed, and the result confirmed.

Methods 200.8, 6020A, 6020B: The interference check standard solution (ICSA) associated with batch 680-596510 had results for one or more elements at a level greater than 2 times the limit of detection (LOD). The vendor acknowledges that these elements are trace impurities in the ICSA standard. These results are not indicative of a matrix interference.

Methods 200.8, 6020A: The interference check standard solution (ICSA) associated with the following samples showed results for Cobalt at a level greater than 2 times the limit of detection (LOD). It is believed that the solution contains trace impurities of this element / these elements and the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution. (ICSA 680-597053/16)

Methods 200.8, 6020, 6020A: The interference check standard solution (ICSA) associated with the following samples showed results for Cobalt at a level greater than 2 times the limit of detection (LOD). It is believed that the solution contains trace impurities of this element / these elements and the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution. (ICSA 680-597249/12) and (ICSA 680-597249/196)

Methods 200.8, 6020, 6020A, 6020B: The interference check standard solution (ICSA) associated with the following samples showed results for cobalt at a level greater than 2 times the limit of detection (LOD). It is believed that the solution contains trace impurities of this element / these elements and the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution. (ICSA 680-597704/12) and (ICSA 680-597704/186)

Methods 200.8, 6020A: The interference check standard solution (ICSA) associated with the following samples showed results for Cobalt at a level greater than 2 times the limit of detection (LOD). It is believed that the solution contains trace impurities of this element / these elements and the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution. (ICSA 680-598010/13) and (ICSA 680-598010/263)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method 350.1: The results reported for the following samples do not concur with results previously reported for this site: W11-5B (480-162382-3), DUP-GW-04 (480-163965-6) and W11-1B (480-163965-7). Reanalysis was performed, and the result(s) confirmed.

Method SM 5310C: The results reported for the following sample do not concur with results previously reported for this site: 620A (480-162327-1). Reanalysis was performed, and the result(s) confirmed.

Method 353.2: The results reported for the following samples do not concur with results previously reported for this site: 620A (480-162327-1), W9-1E (480-162893-5), 628A (480-162953-2), W11-6E (480-162953-4), W12-3E (480-163033-2) and 618CR (480-163965-4). Reanalysis was performed, and the result(s) confirmed.

Method 310.2: The results reported for the following samples do not concur with results previously reported for this site: 620A (480-162327-1), 626B (480-162953-1) and 628A (480-162953-2). Reanalysis was performed, and the result(s) confirmed.

Methods 9251, SM 4500 Cl- E: The results reported for the following sample do not concur with results previously reported for this site: 620A (480-162327-1) and DUP-GW-01 (480-162577-4). Reanalysis was performed, and the result(s) confirmed.

Methods 9038, D516-90, 02: The results reported for the following samples do not concur with results previously reported for this site: 620A (480-162327-1), 107BR (480-162641-2) and W12-1E (480-163285-1). Reanalysis was performed, and the result(s) confirmed.

Method SM 2540D: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: W12-1E (480-163285-1). The reporting limits (RLs) have been adjusted proportionately.

Method SM 2540C: The results reported for the following samples do not concur with results previously reported for this site: W11-5B
