RE: SUMMARY OF 2019 GROUNDWATER AND OTHER ENVIRONMENTAL DATA CROSSROADS LANDFILL, NORRIDGEWOCK, MAINE

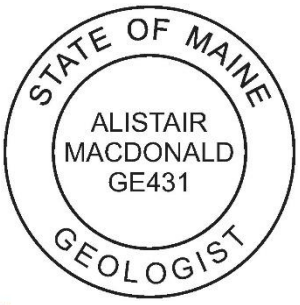
Dear Ms. Butler:

On behalf of Waste Management Disposal Services of Maine, Inc. (WMDSM), Golder Associates Inc. (Golder) is hereby submitting the Summary of 2019 Groundwater and Other Environmental Data for Crossroads Landfill located in Norridgewock, Maine. This report has been prepared to meet the requirements of Revision 6.3 of the Water Quality Monitoring Program (WQMP) dated March 16, 2018 as approved by the Maine Department of Environmental Protection in an email dated May 8, 2018 and Revision 6.4 of the WQMP dated October 31, 2019 and approved by MEDEP in an email dated November 14, 2019. This report includes the 2019 statistical evaluation performed according to the Statistical Analysis Program for Groundwater Quality Monitoring dated June 9, 2017 and approved by the MEDEP via email communication on June 23, 2017. This report also includes response to the comments received from the Maine Department of Environmental Protection titled “2018 Annual Report-Summary of 2018 Environmental Monitoring Information” dated August 6, 2019.

Should you have any questions regarding this report, please do not hesitate to call.

Sincerely,

Golder Associates Inc.



Danielle Sylvia Cofelice, EIT
Project Environmental Engineer

1.0 INTRODUCTION

On behalf of Waste Management Disposal Services of Maine, Inc. (WMDSM), Golder Associates Inc. (Golder) prepared this report to fulfil the annual reporting requirements presented in Section 4D(4) of Chapter 401 of the State of Maine Solid Waste Management Rules (MSWMRs) and the sample reporting requirements presented in Section 3(C) of Chapter 405 of the MSWMRs for the Crossroads Landfill facility in Norridgewock, Maine (Figure 1).

Sampling was conducted in accordance with Revision 6.3 of the Water Quality Monitoring Program (WQMP) dated March 16, 2018, which was approved by the Maine Department of Environmental Protection (MEDEP) in an email dated May 8, 2018 and Revision 6.4 of the WQMP dated October 31, 2019 and approved by MEDEP in an email dated November 14, 2019. Katahdin Analytical Services Inc. (Katahdin) collected groundwater, surface water, leachate, and wick drain samples in May/June, August, and November/December 2019. WMDSM collected leachate flow data (daily) and landfill gas probe and manhole structure data (quarterly) in 2019. Eurofins TestAmerica Laboratories Inc. (TestAmerica) performed the laboratory analyses, except for the analysis of biochemical oxygen demand (BOD) and total E. Coli bacteria analyses, which were performed by Katahdin.

This report includes the following information:

- Evaluation of data gathered for each groundwater monitoring point, including:
  - time-series data plots and visual trend analysis
  - identification and discussion of volatile organic compound (VOC) detections, trace metal detections, values outside of historical ranges or values greater than primary drinking water standards
  - groundwater potentiometric surface contour maps for the bedrock, till, and phreatic units
  - a statistical analysis and report
- Evaluation of data gathered for each surface water monitoring point, including:
  - time-series data plots for a subset of indicator parameters and visual trend analysis
  - identification and discussion of trace metal detections, values outside of historical ranges or values greater than surface water monitoring criteria
- Evaluation of the quantity and quality of leachate generated
- Evaluation of the quantity and quality of liquid in the leak detection and removal system
- Evaluation of the data gathered for each wick drain monitoring location
- Evaluation of landfill gas monitoring data
- Evaluation of the condition of each monitoring well
- Changes to the WQMP
- Response to MEDEP's August 6, 2019 comments on the 2018 Annual Report-Summary of 2018 Environmental Monitoring Information" (Appendix N)

2.0 SAMPLE COLLECTION

Groundwater and surface water sampling locations are identified in Figure 2. Leachate and underdrain sampling locations are identified in Figure 3. Field notes and laboratory analytical reports from the 2019 sampling events are provided as Appendices A and B, respectively.

2.1 Groundwater and Surface Water Level Monitoring

Katahdin measured groundwater levels in 62 wells and measured surface water levels at ten locations on April 26, 2019. Groundwater and surface water elevation measurement data are presented in Table 1. Figures 4, 5 and 6 present interpreted potentiometric surface contour maps for the phreatic, till, and bedrock units, respectively, based on the April 2019 water elevation data.

2.2 Groundwater Quality Sampling

Katahdin conducted the first tri-annual groundwater sampling event between May 3 and June 14, 2019. Katahdin collected groundwater quality samples from 47 of the 48 of the monitoring wells listed in Table 1 of the WQMP. Monitoring well W12-1E went dry during purging and could not be sampled. TestAmerica analyzed the samples for the annual event parameters listed in Table 1 of the WQMP. No samples were analyzed for dissolved metals because all field turbidity readings were less than 15 Nephelometric Turbidity Units (NTUs). Per the WQMP, analysis for total metals is only required when field turbidity values are above 15 NTUs.

Katahdin conducted the second and third tri-annual groundwater sampling events between August 5 and August 30, 2019 and between November 7 and December 19, 2019, respectively. Monitoring well W12-1E went dry during purging and could be not be sampled during the August sampling event, however, Katahdin was able to collect as sample during the November/December 2019 sampling event. TestAmerica analyzed for the parameters listed in Table 2 of the WQMP. The turbidity at 620A in November 2019 was above 15 NTUs, however, due to inadvertent oversight by field personnel, no filtered metal sample was collected.

2.3 Surface Water Quality Monitoring

Katahdin collected surface water samples on May 15, August 22, and November 18, 2019, from the ten sampling locations listed in Table 7 of the WQMP, including three background locations (SW-101, SW-9, and SW-C) and seven downgradient locations (SW-102, SW-201, SW-203, SW-204, SW-801, SW-A, and SW-B). TestAmerica analyzed the surface water samples for the parameters listed in Tables 5 and 6 of the WQMP except for BOD, which was analyzed by Katahdin.

2.4 Leachate Collection and Leak Detection Monitoring

2.4.1 Leachate Collection Monitoring

Katahdin completed TANK and leachate collection (LC) system monitoring in 2019 as follows:

- June 11 through 13, 2019 (first tri-annual event) - Katahdin collected samples from the TANK and the LC monitoring locations identified in Table 8 of the WQMP except for sampling location 45LC. 45LC was dry at the time of the sampling event and a sample was not collected.
- August 28, 2019 (second tri-annual event) - Katahdin collected samples from the TANK and LC monitoring locations identified in Table 10 of the WQMP (i.e., 8ALC, 8BLC, and 8CLC).

- On November 25 and December 10, 2019 (third tri-annual event) - Katahdin collected samples from the TANK and LC monitoring locations identified in Table 10 (i.e., 8ALC, 8BLC, and 8CLC).
- TestAmerica analyzed the LC samples for the first tri-annual event for the parameters as listed in Table 8 of the WQMP and for the parameters listed in Table 10 of the WQMP for the second and third tri-annual events except for BOD, which was analyzed by Katahdin during all three monitoring events.

TestAmerica analyzed the TANK sample for parameters required by the Anson-Madison Sanitary District (AMSD) Industrial Wastewater Discharge Permit and by the Sappi Fine Paper North America (Sappi) Maine Pollutant Discharge Elimination System Permit and Waste Discharge Licenses. BOD and total E. Coli bacteria (TANK sample only) were analyzed by Katahdin due to the short hold times. Both AMSD and Sappi permits require the TANK sample to be analyzed for mercury using the low-detection Method 1631B, which has a detection limit of 5.0 nanograms per liter (ng/l).

2.4.2 Leak Detection Monitoring

Katahdin completed leachate detection (LD) system monitoring in 2019 as follows:

- June 11 and 12, 2019 - Katahdin sampled the LD monitoring locations listed in Table 9 of the WQMP except for sampling locations 4ABLD and 5ABLD. These locations were dry at the time of the sampling event and therefore samples were not collected.

TestAmerica analyzed the LD samples for the annual event parameters listed in Table 9 of the WQMP except for BOD, which was analyzed by Katahdin. LC and LD flow rates and time-series plots for January 1 through December 31, 2019 are provided in Appendix C of this report.

2.5 Wick Drain Monitoring

Katahdin sampled wick drain monitoring locations 8AWD, 8BCWD, and 9WD on June 17, 2019. TestAmerica analyzed the wick drain samples for the parameters listed in Table 12 of the WQMP. On August 30 and November 20, 2019 Katahdin sampled wick drain monitoring location 8BCWD. TestAmerica analyzed this wick drain sample for the parameters listed in Table 13 of the WQMP.

2.6 Quality Assurance/Quality Control Samples

Katahdin collected field duplicate samples at five monitoring wells and one surface water location during each sample event. Golder calculated relative percent difference (RPD) values for these duplicates. The RPD values are discussed in Section 4.1.2 of this report.

Katahdin did not collect equipment blanks because all wells are sampled using dedicated sampling equipment. TestAmerica provided trip blanks and analyzed them for VOCs. The results are discussed in Section 4.2.3 of this report.

3.0 SAMPLE COLLECTION PROTOCOLS

Katahdin collected groundwater samples from the Crossroads Landfill (Site) monitoring wells and the Totman Well using dedicated peristaltic pumps or bladder pumps (Well Wizards®) following low-flow purge, unfiltered sampling methods in accordance with procedures outlined in Section 2.0 of the WQMP. The “New Office Well” and “Garage Well” are equipped with submersible pumps and were sampled from taps located inside the respective buildings. In accordance with the Section 2.0 of the WQMP, these two wells were purged for a minimum of five minutes prior to sample collection.

Golder reviewed the field information forms (Appendix A) and groundwater sample logs for each well to assess whether required stabilization criteria and drawdown requirements are met.

Katahdin collected surface water samples, LC/LD samples, and wick drain samples in accordance with Sections 3.0, 4.0, and 5.0 of the WQMP, respectively. As described in the WQMP, the LC/LD samples were composited for all inactive phases of the landfill. Phase 8 was active during the monitoring period (See Section 2.4.1).

4.0 QUALITY ASSURANCE/QUALITY CONTROL

An integral component of the sampling program is the implementation of a quality assurance/quality control (QA/QC) program, including both field and office elements. Field QA/QC activities are conducted to verify that sample collection, handling and storage methods are adequate to ensure sample integrity. As part of the QA/QC program, Golder completed data validation according to the MEDEP Basic Data Review Checklist. Laboratory reports are included in Appendix B. Laboratory reports including related QA/QC information were previously provided to MEDEP electronically within 30 days of receipt from the laboratory as required by Chapter 405 Section 2(i).

4.1 Field QA/QC Activities

The field activities conducted as part of the QA/QC program include completion of annual inspection of monitoring well and surface water sampling locations and collection of appropriate field QA/QC samples.

4.1.1 Monitoring Well and Surface Water Sampling Location Inspections

Katahdin evaluates the integrity of each monitoring well and surface water sampling location in the water quality monitoring program on an annual basis. The evaluation is based on a visual inspection of each sampling location. Appendices D and E include monitoring well and surface water sampling location inspection forms, respectively. Key elements of the monitoring well inspection include:

- Visual inspection of the well for damage
- Visual inspection of the well for potential surface seal leaks and ponded water
- Evaluation of well security (i.e., presence/condition of locks, caps, signs of vandalism, etc.)

As indicated on the monitoring well inspection forms in Appendix D, all wells inspected by Katahdin were observed to be in satisfactory condition, except for the following:

- The protective surface casings at wells 1008ER2, 620A, and W12-4E move slightly side to side when pressure is applied.
- Mounded dirt obscures the W9-1E well label and needs to be cleared.
- The inside PVC casing at well 107BR can be moved side to side when pressure is applied. Fill material was not observed inside the metal casing of 107BR.
- The surface seals at wells 618AR, 618CR, 624B, 628A, and the Totman well are not sloped to prevent flooding in the immediate vicinity of the surface seal.
- The surface seal at wells 1008ER2 and W11-3E are eroded around and under the base.

- The outside well casing is rusted and standing water was observed inside the metal well casing at 310D and the PVC cap needs to be replaced. A hole was observed near the bottom of the casing.
- The locking cap is rusted at the Totman well and monitoring wells 104C/D, 310AW, and 310C. The well cap on well W12-5E is loose and rusty.
- The steel casing at Well 1041B is angled significantly, causing a bend in the PVC casing. The static water level could not be measured. The well is located on a steep embankment below an access road. Monitoring results to date do not indicate damage to the well integrity. This monitoring location will continue to be monitored and if deemed necessary corrective measures will be considered.

WMDSM re-labeled the monitoring wells, secured loose well caps, and replaced locks as needed at the locations indicated above. Katahdin will continue to visually inspect all monitoring locations prior to sampling and complete corrective actions as necessary.

Key elements of the surface water sampling location inspection include visual inspection for evidence of erosion and/or flow obstruction, and evaluation of watercolor and sediment load. As indicated on the inspection forms included in Appendix E, the surface water sampling locations inspected by Katahdin were observed to be in satisfactory condition, except the following:

- The stake was found out of the water at SW-9, the stake was replaced prior to sampling.
- There is evidence of erosion in the stream bed at SW-A and no real channel exists at low water levels, the erosion will be monitored and if it worsens corrective measures will be considered. The location was not sufficiently labelled but was reflagged during the sample event.
- Flow was somewhat obstructed by sticks at sample location SW-B and SW-102.

4.1.2 Field Duplicate

Duplicate sampling and analysis provide statistical information about sample variability. Katahdin collected four field duplicate samples DUP-GW-01, DUP-GW-02, DUP-GW-03, and DUP-GW-04 at groundwater sampling locations during each monitoring event. Katahdin also collected a field duplicate sample DUP-SW-01 at a surface water location during each monitoring event. TestAmerica analyzed the samples for identical analytical parameters and Golder calculated the RPD value for each parameter as follows:

$$RPD = 100\,x\,\frac{(C_1 - C_2)}{\left(\frac{C_1 + C_2}{2}\right)}$$

where: C_1 = primary sample concentration

C_2 = field duplicate sample concentration

Calculated RPD values are presented in Appendix F. As required by the Solid Waste Regulations, Golder identified the following RPD values greater than 10%, where detected concentrations for both the primary sample and the duplicate sample are both greater than five times the reporting limits for that analyte:

- Monitoring well 620A (May 2019): chloride (24%) and total dissolved solids (TDS) (75%)

- Monitoring well 1008BR2 (May 2019): TDS (57%)
- Monitoring well 104D (August 2019): TDS (10.5%)
- Monitoring well 629B (August 2019): calcium (24%), magnesium (23%), potassium (22%), sodium (24%), and alkalinity (31%)
- Monitoring well 617C (August 2019): calcium (25%), iron (71%), magnesium (130%), sodium (32%), and TDS (13%)
- Monitoring well 310D (August 2019): TDS (46%)
- Monitoring well 106WR (November 2019): iron (29%) and TDS (57.1%)
- Monitoring well W12-1B (November 2019): TDS (23.5%)
- Monitoring well 617C (November 2019): alkalinity (20.7%), chloride (14%), and TDS (15.4%)
- Surface water location SW-204 (August 2019): calcium (10.5%)
- Surface water location SW-102 (November 2019): iron (10.5%) and TDS (36%)

The calculated RPD for all remaining parameters where the concentration reported was greater than five times the reporting limits for that analyte were below 10%.

4.2 Data Validation

QA/QC activities required by the WQMP include the verification of chain-of-custody protocols, sample holding times, and review of other laboratory QA/QC criteria as indicated in the laboratory report narratives. Golder completed data validation according to the MEDEP Basic Data Review Checklist.

4.2.1 Data Completeness and Chain-of-Custody Forms

Laboratory reports received from TestAmerica were complete and met project specifications. Golder also reviewed the chain-of-custody forms and found the forms complete and did not identify lapses in custody.

4.2.2 Preservation and Technical Holding Times

Consistent with current EPA protocols that specify a temperature range of 4°C ±2°C, TestAmerica received each of the coolers at 6°C or cooler. However, TestAmerica identified the following samples as being run outside of hold time for nitrate in May/June 2019 due to laboratory analyst oversight: 8BCWD, 8AWD, and 9WD. The hold time for nitrate is 48 hours and the laboratory ran these samples approximately four days after sample collection. Following the MEDEP Basic Data Review Checklist, the associated sample results were flagged as estimated (UJ/J).

TestAmerica also identified the following samples as being run outside of hold time for TDS in August 2019 due to laboratory oversight: 104C, 104D, 630B, and DUP-GW-01. The hold time for TDS is seven days and samples were analyzed up to six weeks after sample collection. However, results are consistent with historical results. Using professional judgement, the results were qualified as estimated (J). TestAmerica identified the TANK sample as being run outside of hold time for total residual chlorine in November 2019. Total residual chlorine is an analysis generally performed in the field with a hold time of 15 minutes, which was analyzed 11 days after sample collection. The result was qualified as estimated (UJ).

4.2.3 Blanks

The appropriate laboratory blanks were run at the frequency specified by the methods. Katahdin included one VOC trip blank in each shipping cooler containing a VOC sample. Katahdin did not collect equipment blanks because all wells are sampled using dedicated sampling equipment.

4.2.3.1 Method Blanks

TestAmerica detected chloride, TDS, iron, sodium, and potassium at concentrations above the reporting limit in certain method blanks. TestAmerica flagged the associated sample results greater than the blank detections with a “BL”. Golder agrees with TestAmerica’s approach to flagging sample results and did not apply any additional sample flags.

4.2.3.2 Trip Blanks

Katahdin included one VOC trip blank in each shipping cooler containing a VOC sample. Trip blank detection reports are provided in Appendix G. TestAmerica detected methylene chloride in a trip blank in August 2019 associated with the TANK sample, however, methylene chloride was not detected in the TANK sample, no qualification is required. All other trip blanks were non-detect for all sample parameters.

4.2.4 Surrogates

TestAmerica correctly analyzed surrogates when required by the method. Samples 8ALC, 7LC, and 123ABLC (sampled in May/June 2019) were diluted due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information. Additionally, the laboratory’s standard operating procedure (SOP) allows for one acid and one base surrogate to be outside of acceptance criteria without performing re-extraction and/or re-analysis. The following samples contained an allowable number of surrogate compounds with recovery outside of the acceptance criteria: 8BLC, 8CLC, 11ABCLD, 12LD, TANK, and 10ABLD (sampled in May 2019). All other surrogates were recovered within acceptable ranges.

4.2.5 Laboratory Control Samples

Some laboratory control samples and/or laboratory control sample duplicates (LCS/LCSD) were recovered above the control limits for tetrachloroethene, total organic carbon, chloride, iron, chromium, and zinc. The associated sample results were non-detect; therefore, no qualification is required. An LCS for chloromethane was recovered below the QC criteria. All other spike recoveries and quality control indicators, including sample specific surrogate recoveries, were acceptable.

A reporting limit standard was analyzed, and the target analyte was detected. Associated sample results were non-detect and were qualified as estimated (UJ). The affected samples are the May/June 2019 samples collected from 620A, DUP-GW-01, and 620C. Due to the coelution of ethyl acetate with 2-butanone in the full spike solutions, these analytes exceeded QC criteria in the LCS and/or LCSD samples. Associated sample results were non-detect; no qualification is required. The LCS recovery for chloroethane was above control limits for samples 8BLC and 8CLC sampled in August 2019. The associated results were non-detect; no qualification is required.

4.2.6 Matrix Spike Samples

Some ammonia, alkalinity, and sulfate matrix spike samples and/or matrix spike duplicates (MS and/or MSD) were recovered below the acceptable range. Some ammonia, chemical oxygen demand, and sulfate matrix spike and/or matrix spike duplicates were recovered above the acceptable range. Associated results were qualified as

estimated (J/UJ). The RPD for the MS/MSD associated with sulfate in SW-101 in August 2019 and in 620A and SW-101 in November 2019 is above QC criteria.

4.2.7 Duplicates

As described in Section 4.1.2, the field duplicate RPD values for TDS for 620A/DUP-GW-01 and 1008BR2/DUP-GW-03 in May 2019, for sulfate, chloride, and total alkalinity in 629B/DUP-GW-02 in August 2019, for iron, manganese, and sodium in 617C/DUP-GW-03 in August 2019, for TDS in 310D/DUP-GW-04 in August 2019, and for TDS in 106WR/DUP-GW-01, W11-1B/DUP-GW-04, and SW-102/DUP-SW-01 in November 2019, are above 30%. These results were qualified as estimated “J”. All other field duplicate RPDs are below 30% or meet alternative QC criteria. All lab duplicate RPDs were within control limits.

4.2.8 Data Usability

All data were determined to be usable with the qualifications described above and Golder considers the data quality for samples collected in 2019 to be sufficient for the intended use.

5.0 EVALUATION OF GROUNDWATER ANALYTICAL RESULTS

The WQMP requires several data analyses to evaluate groundwater conditions at the Site. These evaluations include:

- tabulation of historical data
- tabulation of the ratio of TDS to specific conductance (SC) and identification of ratios outside of the range of 0.55 to 0.75
- identification of analytical results outside of historical ranges for sampling locations with greater than five analytical results
- tabulation and comparison of turbidity and total suspended solids (TSS) results
- calculation of ionic balances for each sample
- tabulation of results exceeding Maximum Contaminant Levels (MCLs) and Maine Maximum Exposure Guidelines (MEGs)
- tabulation of trace metal detections
- tabulation of VOC detections
- development of time-series plots
- an annual statistical data analysis

The following sections present the required information.

5.1 Historical Data

Appendix H presents historical data for the groundwater monitoring points in the water quality monitoring program.

5.2 Total Dissolved Solids/Specific Conductivity Correlation

MEDEP Solid Waste Regulations (Chapter 405, Section 2) require several QA/QC checks on water quality data. One of these checks entails calculating the ratio of TDS to SC and identifying sample ratios outside the range of 0.55 to 0.75. The TDS to SC ratios for the samples collected are provided in Appendix I.

A review of the May/June 2019 TDS/SC ratios indicates that 34 of the 47 calculated ratios are below the 0.55 to 0.75 range. Seven of the wells with values below the range are upgradient wells (617A, 617C, W11-1B, W11-1 ER, W11-2E, W12-1B, and W12-2E), including the well with the lowest ratio (0.11 at W12-2E). Four wells have TDS/SC ratios above 0.75: 1008BR2 (1.1), 310C (0.80), 628A (0.78), and 630E (0.76). Well 310C is an upgradient well.

A review of the August 2019 TDS/SC ratios indicates that 29 of the 46 calculated ratios are below the 0.55 to 0.75 range, with the lowest ratio of 0.36 at W12-4B. Six of the wells with a value below the range are upgradient wells (310D, 617A, W11-1B, W11-1ER, W11-2E, and W12-1B). Four wells have a TDS/SC ratio above 0.75: 1041B (0.77), 310AW (0.79), 626B (2), and 628A (1.3). Well 310AW is an upgradient well.

A review of the November 2019 TDS/SC ratios indicates that 19 of the 41 calculated ratios are below the 0.55 to 0.75 range. Two of the wells with values below the range are upgradient wells (310C and 617C). Six wells have a TDS/SC ratio above 0.75: 617A (0.92), 620A (1.5), W11-5B (0.89), W11-6E (0.97), W12-2E (1.2) and W12-4B (0.95). Wells 617A and W12-2E are upgradient wells.

In response to a technical review memoranda prepared by Maine DEP in 2009, Golder provided additional discussion regarding the range of TDS/SC ratios measured for groundwater at the Crossroads facility in a letter to WMDSM dated December 23, 2009. In the response, Golder noted that analytical results with TDS/SC ratios outside the range of 0.55 to 0.75 have been common throughout the history of water quality monitoring at the Crossroads facility. The overall percentage of results outside this range has not changed appreciably with time. One factor that may affect calculated TDS/SC ratios is that the ratio is derived by utilizing laboratory analyzed TDS concentrations with field measured SC values. Field measurements are inherently less precise than laboratory analyses, which may contribute to variability in the calculated TDS/SC ratios.

The requirement for identification of TDS/SC ratios outside of the 0.55 to 0.75 range is from the Chapter 405 regulations. However, neither the reason for this requirement nor the basis for the TDS/SC ratio range is provided. Golder assumes that the TDS/SC range used in the Chapter 405 regulations is from a United States Geological Survey (USGS) report entitled Study and Interpretation of the Chemical Characteristic of Natural Water (USGS, 1992) which states that the range of TDS/SC ratios for “natural water” is “mostly between 0.55 and 0.75”. In the context of the USGS report, “natural water” is intended to include river, stream, lake and groundwater. Golder was unable to identify the data set used to establish the TDS/SC ratio range, other than it dates back to 1947. Therefore, Golder was unable to evaluate the statistical validity of this range across the very broad spectrum of "natural water".

To evaluate the potential Site-specific range of "background" TDS/SC ratios, Golder identified a number of Site wells where there has been no indication of impacts from landfilling and found that the expected range of TDS/SC ratios to be observed in Site groundwater is approximately 0.30 to 1.0. As such, it may be more appropriate to use this range to identify outliers. Even then, it is not clear to Golder what values outside of any range is intended to identify, as it is Golder's opinion that the TDS/SC ratios calculated for the Crossroads facility are not a predictor of groundwater quality or laboratory/field measurement precision.

5.3 Identification of Analytical Results Outside of Historical Ranges

Appendix J includes a tabulation of maximum and minimum values for parameters that have been analyzed more than five times at each sampling location. When both total and dissolved metals analysis were completed, Golder only included dissolved metals in the evaluation. Golder identified forty-five new minimum and fifty-two new maximum values for samples collected from both upgradient and downgradient wells during the three 2019 sampling events. The following summarizes key observations relative to the new maximum and minimum values:

- Twenty-four of the new minimum values are for oxidation-reduction potential. Golder reviewed the calibration and sample forms associated with these new minimums. Although the calibration logs did not indicate any problems, most of the wells with new minimums were sampled with the same field meter. Golder suspects these new minimums are due to equipment malfunction. Katahdin is evaluating the field meter and if required, will replace it prior to the next sample event.
- Twenty new minimum values are non-field measured parameters and include new minimum values for alkalinity, barium, calcium, chloride, nitrate, manganese, magnesium, potassium, sodium, and total dissolved solids. Four of these twenty new minimum values occurred at upgradient wells.
- Thirty-seven of the fifty-two new maximum values are non-field measured parameters, including new maximum values for alkalinity, aluminum, arsenic, barium, calcium, chloride, iron, nitrate, magnesium, sulfate, total suspended solids, and total dissolved solids. Six of these new maximums occurred at upgradient wells.

A qualitative review of the new maximum and minimum concentrations along with other data evaluations described herein does not indicate a significant change in groundwater quality between the 2019 sampling events and previous sampling events.

5.4 Turbidity/Total Suspended Solids Correlation

The WQMP requires an evaluation of turbidity and TSS values. Values for turbidity and TSS have been tabulated and are provided in Table 2. The regulations require that samples with a TSS value above 50 milligrams per liter (mg/L) or turbidity value above 50 NTUs be identified. There were no samples collected in 2019 with TSS values above 50 mg/L or turbidity values above 50 NTUs.

In a memorandum dated May 1, 2012, Maine DEP suggested that filtered (dissolved) and unfiltered (total) samples be collected at well locations with field turbidity values above 15 NTUs. The turbidity at 620A in November 2019 was above 15 NTUs, however, due to field staff oversight no filtered metal sample was collected. All other field turbidity values were below 15 NTUs prior to sample collection.

5.5 Major Ion Electrical Balance

A cation/anion balance report for each groundwater monitoring location is provided in Appendix I. Generally, anion and cation sums when expressed as milliequivalents per liter should balance for potable waters because they are assumed to be electrically neutral. TestAmerica calculated the balances to be within 10% for all but three of the upgradient groundwater locations sampled in 2019. Upgradient well 310C had an ion balance of 11% in May 2019, upgradient well W12-1E had an ion balance of 12% in November 2019, and upgradient well W12-2E had an ion balances of 65%, 60%, and 56% in May, August, and November 2019, respectively. The high ion balance for the sample collected at W12-2E is due to several non-detect anion results.

The ion balances for downgradient wells 618CR, 620A, and 629B were outside 10% in August 2019 (34%, -31%, and -28%, respectively). The ion balances for downgradient wells 620A, 624B, 628A, and W11-6E were outside 10% in November 2019 (17%, -27%, -20%, and 26%, respectively).

5.6 Comparison to MCLs, SMCLs, and MEGs

The WQMP requires a comparison of groundwater analytical results to Maine's MEGs and federal drinking water standards referred to as MCLs. Secondary MCLs (SMCLs) are secondary federal drinking water guidelines based upon possible cosmetic or aesthetic effects of drinking water. Table 3 lists detections above an MCL, SMCL and/or MEG in groundwater samples collected during the 2019 sampling events.

TestAmerica detected aluminum at concentrations above the SMCL (0.05 mg/L) in groundwater samples from one well in May 2019, two wells in August 2019, and three wells in November 2019, but it was not detected above the MEG (7.0 mg/L) in any sample. Four of the wells with detections of aluminum above the SMCL (617A, 617C, W11-1ER, and W12-1E) are upgradient monitoring wells. There is no MCL for aluminum.

TestAmerica detected arsenic at concentrations above the MEG (0.01 mg/L) and the MCL (0.01 mg/L) in groundwater samples from twelve wells in May/June 2019, thirteen wells in August 2019, and thirteen wells in November 2019. Four of the wells with arsenic detections above the MEG/MCL (617A, 617C, W11-1B, and W12-1B) are upgradient monitoring wells.

TestAmerica detected iron at concentrations above the SMCL (0.3 mg/L) in groundwater samples from four wells in May 2019, four wells in August 2019, and six wells in November 2019. Iron was not detected above the MEG (5.0 mg/L) in any sample. Four of these wells, 617A, 617C, W11-1ER, and W12-1E are upgradient monitoring wells. All of the downgradient wells are downgradient of Phases 1-10 and are screened in the Till, except for well 620A which is screened in the phreatic zone. There is no MCL for iron.

TestAmerica detected manganese at concentrations above the SMCL (0.05 mg/L) in May/June 2019 in groundwater samples from nine wells (two of the wells are upgradient W11-1ER and W12-1B) and above the MEG (0.3 mg/L) in six of those samples. The wells with detections above the MEG include upgradient well W11-1ER and wells downgradient of Phases 1-10 screened in the phreatic or till zones. TestAmerica detected manganese above the SMCL in twelve wells in August 2019 including the same nine wells as in May/June (with the exception of W12-1B) and one additional downgradient well screened in the phreatic zone and two additional downgradient wells screened in the till and in upgradient well 617C. TestAmerica detected manganese above the MEG in five of those wells. TestAmerica detected manganese above the SMCL in twelve wells in November 2019 including the same nine wells as in May/June as well as two additional upgradient wells 617A and W12-1E and one additional downgradient well screened in the phreatic zone. TestAmerica detected manganese above the MEG in five of those wells. There is no MCL for manganese.

TestAmerica detected sodium at concentrations above the MEG (20 mg/L) in groundwater samples from five wells during all three sample events. In addition to these five wells, TestAmerica detected sodium above the MEG in W9-1E in November 2019 and 618AR in August and December 2019. Two of these wells (617A and 617C) are upgradient monitoring wells. All of the downgradient wells are downgradient of Phase 1-10 and are screened in bedrock except monitoring wells W9-1E and 618AR which are screened in the phreatic zone. There is no MCL or SMCL for sodium.

TestAmerica detected uranium in the TRANS well above the MEG (30 mg/L).

TestAmerica did not detect any other parameter at concentrations above the laboratory reporting limits that are above the MCL, SMCL, or MEG standards in groundwater samples collected during the 2019 sampling events. The reporting limit for vinyl chloride is above the MEG standard of 0.2 microgram per liter (ug/L). Test America cannot reduce the reporting limit below the MEG standard for vinyl chloride (0.2 ug/L), because the method detection limit is 0.9 ug/L.

5.7 Trace Metal Detections

Table 4 summarizes the detections of trace metals in groundwater above analytical detection limits. TestAmerica detected trace metals arsenic, barium, and chromium during 2019. None of the trace metals were detected at concentrations above the MCL or MEG standards except arsenic. As discussed in Section 5.1.6, arsenic was detected at concentrations above the MCL and MEG in both upgradient and downgradient groundwater samples.

5.8 Volatile Organic Compound Detections

TestAmerica did not detect any VOCs at concentrations above the laboratory reporting limits in groundwater samples collected for VOC analysis in 2019.

5.9 Statistical Analysis

Eagon completed a statistical analysis of the 2019 groundwater quality data in accordance with the “Statistical Analysis Program for Groundwater Quality Monitoring Crossroads Landfill” dated June 9, 2017 and approved by the MEDEP via email communication on June 23, 2017. Eagon’s report on Statistical Analysis of 2019 Groundwater Quality Results (2019 Statistical Analysis Report) is attached as Appendix M. The following sections discuss the results of the statistical analysis.

5.9.1 Volatile Organic Compound Results

A result at or above the laboratory reporting limit is consider a statistically significant increase. No VOCs were detected above the laboratory reporting limit in 2019.

5.9.2 Intrawell Mann-Kendall Trend Analysis

Eagon completed an intrawell trend analysis using the Mann-Kendall trend test method to identify statistically significant upward or downward trends for all wells and parameters with at least 25% detected data. The analysis was performed at the 95% confidence level with alpha = 0.05 split between each tail resulting in an actual 97.5% overall confidence level.

Eagon based the trend analysis on either the most recent 10 results or the most recent five-year moving window, whichever produced the largest number of results. Therefore, an approximate 10-year moving window was used for parameters monitored annually until 2018 (i.e, arsenic and barium) and a 5-year moving window was used for parameters monitored tri-annually. As requested by DEP, trend graphs with fewer than 10 detected results were redacted from the output. Redacted trend analyses are indicated by a line through the trend plot (e.g., see Graph 7 in Attachment A[1] of the 2019 Statistical Analysis Report).

Results of the Mann-Kendell trend analysis are summarized in Table 9. Trend plots for all wells/parameters with an identified statistically significant trend (either up or down) are presented in Attachment A of the 2019 Statistical

[1] The trend charts for barium are presented after the trend charts for the parameters monitoring tri-annually in Attachment A of the 2019 Statistical Annual Report.

Analysis Report. The following sections discuss the identified trends for specific areas of the Site by hydrostratigraphic unit (i.e., phreatic unit, till unit, bedrock unit).

5.9.2.1 Statistically Significant Trends for Phase 1 through 10 Upgradient Wells

Phreatic Wells

Eagon identified statistically significant increasing trends for chloride, nitrate, and specific conductance and a statistically significant decreasing trend for potassium in upgradient phreatic well 310AW. Review of the long-term chloride trend plots for 310AW indicates that chloride concentrations have fluctuated over the past 20 years. However, the overall magnitude of fluctuation is relatively low (i.e., all results are less than 10 mg/L). The identified statistically significant increasing trend over the last 5 years is consistent with longer-term fluctuations in chloride concentrations. The observed statistically increasing trend in specific conductance within the last 5 years is also consistent with historical fluctuations. The identified statistically significant increasing trend for nitrate is a reversal of a more historical decreasing trend. Concentrations of nitrate generally decreased until approximately five years ago. Overall nitrate concentrations are low (i.e., less than 0.40 mg/L) at this well and the most recent results are well below the historical maximum. The observed statistically decreasing trend in potassium over the last 5 years is consistent with a long-term trend in decreasing potassium concentrations. Overall concentrations of potassium are low (i.e., results are less than 2.5 mg/L) at this well and the most recent results are well below the historical maximum. Eagon also identified a statistically significant decreasing trend of manganese in the upgradient phreatic well 617A over the last 5 years. The observed statistically decreasing trend in manganese within the last 5 years is consistent with historical fluctuations. Overall concentrations of manganese are low (i.e., less than 0.5 mg/L) at this well and the most recent results are well below the historical maximum.

Till Well

Eagon identified a statistically significant increasing trend in calcium, chloride, specific conductance, nitrate and TDS and no statistically significant decreasing trends in upgradient till well 310C. The observed statistically increasing trend of calcium over the last 5 years is consistent with the 20-year long-term fluctuations in calcium concentrations. Review of the long-term chloride and nitrate trend plots for 310C suggests that the recent increase in chloride and nitrate concentrations is are reversals of a downward trends starting from historical highs in 2005 and 1994, respectively and lasted until approximately 2010, from which point chloride and nitrate concentrations have slowly increased while remaining below their previously observed high values. Review of the long-term trend plots for TDS and specific conductance indicates that concentrations of these parameters has been variable over time and that the recent statistically significant increasing trends are consistent with the historical range of TDS and specific conductance observed at this well.

Bedrock Wells

Eagon identified the following statistically significant trends in bedrock wells upgradient of Phases 1 through 10:

- Decreasing trends:
  - 617C: alkalinity, calcium, magnesium, potassium, sodium, aluminum, specific conductance, pH, TDS, and total organic carbon (TOC)
- Increasing trends:
  - 617C: arsenic

- 310D: dissolved oxygen, TDS, and specific conductance

Eagon identified both statistically significant increasing and decreasing trends for well 617C and statistically significant increasing trends for well 310D. The identified statistically significant decreasing trends for well 617C are typically reversals of more historical increasing trends. Concentrations of all of these parameter results have been variable but overall have been decreasing since reaching a maximum about 18 years ago. The identified increasing trend in arsenic for well 617C is of very low magnitude, and recent arsenic concentrations are well below the historical maximum. The identified statistically increasing trends for well 310D are parameters that have been variable over the last 20 years but have changed by very low magnitudes in the last 5 years.

In summary, the trend analysis for wells upgradient of Phases 1 through 10, which identified both statistically significant upward and downward trends, indicates that there is variability in upgradient groundwater quality unrelated to landfill development. This variability must be considered when reviewing results for downgradient wells.

5.9.2.2 Statistically Significant Trends for Phase 11 and 12 Upgradient Wells

Phreatic Wells

Eagon identified statistically significant increasing trends for chloride and specific conductance for well W11-2E and barium for well W12-2E. Eagan also identified a statistically significant decreasing trend in calcium and magnesium for well W12-2E. No statistically significant trends were identified in the data sets for W11-1E/W11-1ER or W12-1E.

The recent increasing trend for chloride in W11-2E is consistent with a longer-term trend. However, the magnitude of change over approximately 20 years (approximately 5 mg/L) is limited. The specific conductance results within W11-2E have shown fluctuations in the past 10 years and recent results are within the historical range.

Review of longer-term trends in calcium in well W12-2E, indicates variability over time and while the most recent calcium concentrations are generally lower than historical concentrations, the magnitude of change over 20 years is limited, with all results within 0.80-1.3 mg/L. The identified statistically significant decreasing trend for magnesium in well W12-2E is a reversal of a historical increasing trend. The identified statistically significant increasing trend for barium at well W12-2E is the result of five most-recent sample results. However, the magnitude of the increase is very low (from 0.0075 to 0.0100 mg/L).

Till Wells

Eagon identified statistically significant increasing and decreasing trends for upgradient wells W11-1B (one increasing, three decreasing) and W12-1B (one increasing, one decreasing). The identified decreasing trends for W11-1B (arsenic, magnesium, and sodium) are all low magnitude changes. The identified increasing trend in dissolved oxygen concentrations in W11-1B appears to be a reversal of lower concentrations detected in 2015. Dissolved oxygen concentrations in samples collected from W11-1B in 2019 are consistent with historical concentrations of dissolved oxygen detected at this well.

Eagon identified a statistically significant downward trend for sulfate in W12-1B. Sulfate concentrations have been variable over the history of monitoring at W12-1B, and recent results are consistent with historical ranges but overall show a decreasing trend in the last 5 years. While Eagan identified a statistically significant increasing trend for specific conductance at W12-1B, the 2019 results are consistent with historical ranges.

In summary, the identified trends in groundwater samples collected upgradient of Phases 11 and 12 are generally of low magnitude and are consistent with the overall variability in groundwater quality observed during the history of monitoring within the till. Analytical results from 2019 are consistent with historical ranges. None of the Phase 11 or 12 monitoring wells are screened in bedrock.

5.9.2.3 Statistically Significant Trends for Phase 1 through 10 Downgradient Wells

The results of the trend analysis for wells located downgradient of Phases 1 through 10 are summarized in Table 9 and are consistent with previously-noted historical episodic releases and an overall improvement in groundwater quality at the Crossroads facility.

Phreatic Wells

Eagon identified statistically significant trends in the following phreatic wells located downgradient of Phases 1 through 10:

- Decreasing trends:
  - 1008ER2: sodium
  - 620A: iron
  - 629E: barium and sodium
  - 630E: alkalinity, chloride, sodium, and TOC
  - W9-1E: chloride
- Increasing trends:
  - 1008ER2: potassium
  - 618AR: dissolved oxygen and specific conductance
  - 620A: specific conductance
  - 629E: nitrate
  - 630E: calcium and dissolved oxygen
  - W9-1E: calcium and specific conductance
  - W9-2E: specific conductance

No statistically significant trends were identified in the data set for downgradient well 106WR. In general, the identified decreasing trends are consistent with longer-term trends in phreatic unit water quality. The overall magnitude of concentration changes in most of the identified trends is limited. These identified trends fit into one of the following categories:

- A decreasing trend that is consistent with a longer-term trend that has been apparent for almost the entire history of monitoring, including:
  - 1008ER2: sodium

- 629E: barium
- 630E: chloride

- A decreasing trend that is part of a historical pattern of variable parameter concentration, including:
  - 620A: iron
  - 629E: sodium
  - 630E: alkalinity, sodium, and TOC
  - W9-1E: chloride

The identified increasing trends are consistent with longer-term trends in phreatic unit water quality. The overall magnitude of concentration changes in most of the identified trends is limited. The identified statistically significant increasing trends fit into one of the following categories:

- An increasing trend that is part of a historical pattern of variable parameter concentration, including:
  - 618AR: dissolved oxygen and specific conductance
  - 620A: specific conductance
  - 630E: dissolved oxygen
  - W9-1E: specific conductance
  - W9-2E: specific conductance
- An increasing trend that is the reversal of a previous decreasing trend, including:
  - 1008ER2: potassium
- An increasing trend that is consistent with a longer-term trend that has been apparent for almost the entire history of monitoring, including:
  - 629E: nitrate
  - 630E: calcium
  - W9-1E: calcium

In summary, the identified statistically significant trends in phreatic unit groundwater samples collected downgradient of Phases 1 through 10 are generally of low magnitude and are consistent with the overall variability in groundwater quality observed during the history of monitoring. Analytical results from 2019 are generally consistent with historical ranges and overall groundwater quality was unchanged in 2019.

Till Wells

Eagon identified statistically significant trends in the following till wells located downgradient of Phases 1 through 10:

- Decreasing trends:

- 1008BR2: sodium
- 1041B: alkalinity, chloride, and calcium
- 104C: iron and barium
- 107BR: pH
- 618CR: arsenic, pH, and sodium
- 624B: pH
- 626B: dissolved oxygen and nitrate
- 630B: sodium

- Increasing trends:
  - 1008BR2: nitrate and specific conductance
  - 1040B: sulfate
  - 104C: dissolved oxygen
  - 106CR: iron and sulfate
  - 107BR: alkalinity, calcium, chloride, iron, magnesium, manganese, potassium, sodium, barium, specific conductance and TDS
  - 618CR: barium
  - 620C: specific conductance
  - 624B: alkalinity, calcium, chloride, magnesium, manganese, sulfate, barium, specific conductance, and TDS
  - 629B: dissolved oxygen
  - 630B: barium

No statistically significant trends were identified in the data set for downgradient well 101C. In general, the overall magnitude of concentration change in most of the identified trends is limited. The identified trends fit into one of the following categories:

- A decreasing trend that is a reversal of a historical increase in parameter concentration, including:
  - 104C: iron
  - 618CR: arsenic
- A decreasing trend that is part of a historical pattern of variable parameter concentration, including:
  - 1008BR2: sodium
  - 1041B: alkalinity, calcium, and chloride

- 104C: barium
- 107BR: pH
- 618CR: pH and sodium
- 620C: specific conductance
- 624B: pH
- 626B: dissolved oxygen and nitrate
- 630B: sodium

- An increasing trend of very low overall magnitude/concentration, including:
  - 1040B: sulfate
  - 624B: manganese
  - 630B: barium
- An increasing trend that is part of a historical pattern of variable parameter concentration, which in some cases includes much higher historical concentrations, including:
  - 1008BR2: nitrate, and specific conductance
  - 104C: dissolved oxygen
  - 106CR: iron and sulfate
  - 107BR: sodium and specific conductance
  - 618CR: barium
  - 624B: alkalinity, barium, calcium, chloride, magnesium, sulfate, TDS, and specific conductance
  - 629B: dissolved oxygen
- An increasing trend that is part of a historical pattern of low parameter concentration, with a recent increase, including:
  - 107BR: chloride
- An increasing trend that is a reversal of a historical decrease in parameter concentration, including:
  - 107BR: alkalinity, calcium, iron, magnesium, manganese, potassium, total dissolved solids, specific conductance and barium

In summary, the identified statistically significant trends in till groundwater samples collected downgradient of Phases 1 through 10 are generally of low magnitude and/or are consistent with the overall variability in groundwater quality observed during the history of monitoring. Analytical results from 2019 are generally consistent with historical ranges and overall groundwater quality in the till unit was unchanged in 2019.

Bedrock Wells

Eagon identified statistically significant trends in the following bedrock wells located downgradient of Phases 1 through 10:

- Decreasing trends:
  - 104D: iron, magnesium, and manganese
  - 106DR: chloride, potassium, and sodium
  - 107CR: alkalinity, calcium, magnesium, potassium, sodium, specific conductance, and TDS
  - 627A: pH
- Increasing trends:
  - 104D: dissolved oxygen
  - 106DR: calcium, specific conductance, and TDS
  - 1134B: specific conductance
  - 627A: dissolved oxygen and specific conductance

No statistically significant trends were identified in the data set for 628A. The identified decreasing trends generally fit into one of the following categories:

- A decreasing trend that is a reversal of a historical increase in parameter concentration
  - 106DR: potassium
  - 107CR: alkalinity, calcium, magnesium, potassium, sodium, specific conductance, and TDS
- A decreasing trend of very low overall magnitude/concentration, including:
  - 104D: iron, magnesium, and manganese
  - 106DR: chloride and sodium
- A decreasing trend that is part of a historical pattern of variable parameter concentration, including:
  - 627A: pH

The identified increasing trends generally fit into one of the following category:

- An increasing trend that is part of a historical pattern of variable parameter concentration, which in some cases includes much higher historical concentrations, including:
  - 104D: dissolved oxygen
  - 106DR: calcium, TDS, and specific conductance
  - 1134B: specific conductance
  - 627A: dissolved oxygen and specific conductance

In summary, the identified statistically significant trends in bedrock groundwater samples collected downgradient of Phases 1 through 10 are generally of low magnitude and/or are consistent with the overall variability in groundwater quality observed during the history of monitoring. Analytical results from 2019 are generally consistent with historical ranges and overall groundwater quality in the bedrock was unchanged in 2019.

5.9.2.4 Statistically Significant Trends for Phase 11 and 12 Downgradient Well

The trend analysis for wells located downgradient of Phases 11 and 12 identified both statistically significantly decreasing trends and increasing trends as summarized in Table 9. For the reasons discussed below, the identified increasing trends are not attributed to a release from the landfill cells.

Phreatic Wells

Eagon identified statistically significant trends in the following phreatic wells located downgradient of Phases 11 and 12:

- Decreasing trends:
  - W11-5E: chloride
  - W11-6E: alkalinity
  - W12-3E: barium
  - W12-4E: barium, chloride, and magnesium
  - W12-5E: barium
- Increasing trends:
  - W11-3E: barium, alkalinity, and specific conductance
  - W11-4E: alkalinity, calcium, dissolved oxygen, magnesium, potassium, specific conductivity, and TDS
  - W11-5E: specific conductivity
  - W11-6E: nitrate
  - W12-3E: specific conductivity
  - W12-4E: sodium

The statistically significant decreasing trends identified by Eagon are a reversal of a historical increase in parameter concentration except for the decreasing barium trends identified in W12-4E and W12-5E which are a continuation of a decreasing trend of low overall magnitude/concentration throughout the duration of monitoring. The identified increasing trends fit into one of the following categories.

- An increasing trend of very low overall magnitude/concentration and sometimes a reversal of a previous decreasing trend, including:
  - W11-3E: alkalinity, barium, and specific conductivity
  - W11-4E: potassium, dissolved oxygen, and TDS

  - W11-6E: nitrate
  - W12-3E: specific conductance
  - W12-4E: sodium
- An increasing trend that is consistent with a long-term trend dating back to the beginning of the monitoring period (i.e., 1998 for Phase 11), including:
  - W11-4E: alkalinity, calcium, specific conductivity, and magnesium
  - W11-5E: specific conductivity

Additional discussion of groundwater quality in the phreatic unit downgradient of Phases 11 and 12 is presented in Section 5.10.5.

Till Wells

Eagon identified statistically significant trends in the following till wells located downgradient of Phases 11 and 12:

- Decreasing trends:
  - W12-4B: alkalinity, manganese, potassium, and sulfate
- Increasing trends:
  - W11-5B: specific conductance

All identified trends in the till wells downgradient of Phases 11 and 12 are of a very low magnitude and/or are within the variability patterns of fluctuations within the given well. Analytical results from 2019 are generally consistent with historical ranges and overall groundwater quality in the till unit was unchanged in 2019.

5.9.3 Interwell Prediction Limits

In accordance with the Statistical Analysis Program (Eagon, 2017), Eagon used interwell (upgradient compared to downgradient) prediction limits to compare upgradient and downgradient water quality for landfill Phases 11 and 12. As part of this analysis, Eagon identified outliers using the Dixon's outlier test. Results of the interwell prediction analysis are included in Attachment B of the 2019 Statistical Analysis Report (Appendix M).

A five-year moving window was used to determine the current upgradient groundwater quality and to establish prediction limits. The highest non-detect reporting limit was substituted for all non-detect results in the background period. Eagon compared the most recent downgradient parameter concentrations to the associated prediction limit. The results of the interwell prediction limits are summarized in Table 4 of the 2019 Statistical Analysis Report and trend graphs are provided in Attachment B of the 2019 Statistical Analysis Report. Eagon identified the following results to be above the prediction limit in downgradient phreatic wells:

- W11-3E: nitrate, calcium, and dissolved oxygen
- W11-4E: alkalinity, calcium, magnesium, potassium, specific conductance, and sulfate
- W11-5E: arsenic
- W11-6E: calcium

- W12-3E: alkalinity, nitrate, specific conductance, and calcium
- W12-4E: nitrate
- W12-5E: alkalinity, calcium, nitrate, specific conductance, and potassium

No parameters were identified at concentrations above prediction limits in downgradient till wells.

Golder's review of the interwell prediction limit evaluation indicates the following:

- W11-3E: Most of the calcium results in the past 5 years were identified as being above the prediction limit, however, as discussed in Section 5.9.2.4, a statistically significant increasing trend for calcium was not identified in this well. Only the most recent (November 2019) dissolved oxygen result and the three nitrate results collected in 2019 are above their respective prediction limits. Statistically significant increasing trends were not identified for these parameters.
- W11-4E: All or most of the alkalinity, calcium, magnesium, specific conductance, potassium, and sulfate results in the past 5 years are identified as being above the prediction limit and all (except sulfate) were identified as having statistically significant increasing trends (see Section 5.10.2.4). However, increases have been gradual and minimal over the past 5 years. The most recent specific conductance, magnesium, and calcium results represent historical maximums.
- W11-5E: The most recent arsenic results in the past 5 years are identified as being above the prediction limit. However, a statistically significant trend has not been identified for arsenic and the most recent results are below historical maximums.
- W11-6E: Most of the calcium results in the past 5 years have been above the prediction limit, however, a statistically significant increasing trend was not identified and the most recent results are below the historical maximums.
- W12-3E: All or most of the alkalinity, calcium, and nitrate results in the past 5 years have been above the prediction limit, however, none of these parameters were identified as having statistically significant increasing trends and recent detections of both parameters are below historical maximums. The most recent specific conductance results are above the prediction limit, and a statistically significant increasing trend was identified, however, the most recent results are below the historical maximum.
- W12-4E: All of the nitrate results in the past 5 years have been above the prediction limit, however, a statistically significant increasing trend has not been identified for nitrate and recent detections of nitrate are below historical maximums.
- W12-5E: All or most of the calcium, potassium, and nitrate results in the past 5 years have been above the prediction limit, however, neither of these parameters were identified as having a statistically significant increasing trend. The most recent alkalinity and specific conductance results from the past year are above the prediction limit.

Additional discussion of Phase 11 and Phase 12 groundwater quality is presented in Section 5.9.5.

5.9.4 ORP Linear Regression Analysis

Eagon performed a linear regression analysis with 99% confidence intervals to evaluate ORP results. This analysis is included in Attachment C of the 2019 Statistical Analysis Report. Eagon identified ORP results above and below the 99% confidence intervals in 2019.

Upgradient Wells

Eagon identified an ORP result collected in 2019 from upgradient phreatic wells 310AW and 617A and upgradient bedrock well 310D to be above the 99% confidence intervals. These results do not represent historical maximums.

Eagon identified an ORP result collected in 2019 from upgradient phreatic wells 617A, W11-2E, and W12-2E to be below the 99% confidence interval. Additionally, Eagon identified a recent ORP result from upgradient till well W12-1B to be below the 99% confidence interval.

Downgradient Wells

Eagon identified three ORP results to be above the 99% confidence interval and four ORP results to be below the 99% confidence interval in downgradient phreatic wells. Three of the four ORP results below the 99% confidence interval (629E, 630E, and W11-3E) correspond to historical new minimums.

Eagon identified two ORP results to be above the 99% confidence interval and six ORP results to be below the 99% confidence interval in downgradient till wells. All of the ORP results below the 99% confidence interval correspond to historical new minimums. Eagon also identified two ORP results below the 99% confidence interval in downgradient bedrock wells, both of which correspond with new historical minimums.

As discussed in Section 5.3, Golder believes the low ORP results may be the result of a malfunctioning field meter.

5.9.5 Discussion of Phreatic Groundwater Quality Downgradient of Phase 11 and 12

As described above, Eagon identified the following statistically significant increasing trends in phreatic groundwater downgradient of Phases 11 and 12:

- W11-3E: alkalinity, barium, and specific conductance
- W11-4E: alkalinity, calcium, dissolved oxygen, magnesium, potassium, specific conductivity, and TDS
- W11-5E: specific conductivity
- W11-6E: nitrate
- W12-3E: specific conductivity
- W12-4E: sodium

In addition, Eagon identified the following results to be above the prediction limit in samples from phreatic wells located downgradient of Phases 11 and 12:

- W11-3E: calcium, dissolved oxygen, and nitrate
- W11-4E: alkalinity, calcium, magnesium, potassium, specific conductance, and sulfate

- W11-5E: arsenic
- W11-6E: calcium
- W12-3E: alkalinity, calcium, specific conductance, and nitrate
- W12-4E: nitrate
- W12-5E: alkalinity, calcium, nitrate, specific conductance, and potassium

These findings suggest a change in groundwater quality downgradient of Phases 11 and 12 over time. However, the change in groundwater quality is not attributed to a release of leachate from the landfills for the following reasons:

- Some of the observed water quality changes predate waste placement in the landfill cells (see below).
- The observed changes in water quality generally do not include typical leachate indicator parameters such as chloride and sodium.
- The changes in water quality have occurred gradually over long periods of time and in most cases are of very low magnitude.
- In most cases, the concentration trends have reversed even though no corrective actions have been implemented.

The conclusion that the changes in groundwater quality are not consistent with a release of leachate from the landfill cells is consistent with the fact that the both Phases 11 and 12 are constructed with double-composite liner systems and inter-liner collection systems, making the likelihood of a leachate release to groundwater extremely low.

Instead, the changes in phreatic groundwater quality downgradient of Phase 11 and 12 are attributed to one, or the combination of the following:

- Elimination of local precipitation recharge to the phreatic unit as result of construction of the landfill liner system which results in slight enrichment of natural ions in the phreatic groundwater.
- The flow and mixing of connate water from the underlying gray clay into the phreatic unit (weathered olive-brown clay) as a result of loading (i.e., landfill construction and waste placement). The connate water within the Presumpscot formation (gray clay) is likely dominated by calcium, magnesium and bicarbonate (principle component of alkalinity) due to dissolution of marine minerals or fossils and/or seawater inclusion at the time of deposition.

The groundwater water quality for Phase 11 and Phase 12 was discussed in detail in the 2018 Summary of Groundwater and Other Environmental Data Report (Golder 2019).

5.9.6 Statistical Analysis Summary

Based on a review of the results of the statistical analysis, Golder concludes the following:

- No VOCs were detected at or above the reporting limit during the 2019 annual sampling event.

- Statistically significant trends were identified in wells upgradient of Phases 1 through 10. These trends are consistent with longer-term fluctuations in upgradient groundwater quality. The variability is most pronounced in upgradient bedrock water quality.
- Few statistically significant trends were identified in wells upgradient of Phases 11 and 12.
- A mix of increasing and decreasing statistically significant parameter trends was identified in phreatic and till wells located downgradient of Phases 1 through 10, which are consistent with the previously identified historical episodic releases in the area of Phase 1 through 10.
- Results of the interwell prediction limit evaluation for Phases 11 and 12 are consistent with the results of the trend analysis, indicating a general change in water quality beneath the landfilled areas as a result of the elimination of local precipitation recharge and the mixing of pore water from the gray clay.
- The linear regression analysis for ORP indicates little statistically significant change in ORP values in site groundwater.
- Identified statistically significant parameter trends in phreatic wells located down gradient of Phase 11, and to a lesser extent Phase 12, are interpreted to be the result of the elimination of local precipitation recharge to the phreatic unit and the flow and mixing of connate water from the underlying gray clay into the phreatic unit as a result of increased pore pressures in the gray clay from loading (i.e., landfill construction, waste placement, and final closure construction).

6.0 EVALUATION OF SURFACE WATER ANALYTICAL RESULTS

The approved WQMP requires the following data analyses to evaluate surface water quality conditions at the Site:

- tabulation of historical data
- identification of results outside of historical ranges
- tabulation of statewide water quality criteria (SWQC) exceedances
- tabulation of trace metal detections
- development of time-series trend plots for sodium, calcium, chemical oxygen demand (COD), and TOC
- tabulation of surface water flow rates

The following sections present the required information.

6.1 Historical Data

Appendix H includes historical data for the surface water sampling locations.

6.2 Identification of Analytical Results Outside of Historical Ranges

Appendix J includes a tabulation of maximum and minimum values for each parameter at each sampling location. Golder identified twenty-two new maximum and three new minimum values at both upgradient and downgradient surface water sampling locations during the 2019 sampling events. There were six new maximums for field parameters including flow rate at monitoring locations SW-101, SW-204, and SW-B, specific conductance at monitoring location SW-A, dissolved oxygen at monitoring location SW-102, and field measured turbidity at

monitoring location SW-9. Ten of the new maximums occurred at upgradient surface water monitoring locations including new maximums for chemical oxygen demand, total dissolved solids, total organic carbon, chloride, iron, and magnesium. New maximum alkalinity, ammonia, chemical oxygen demand, chloride, dissolved oxygen, flow rate, nitrate, specific conductance, sodium, total dissolved solids, and total organic carbon results were identified at downgradient surface water monitoring locations. New minimum concentrations included potassium at SW-B, chloride at SW-801, and dissolved oxygen at SW-C. A qualitative review of this information and the time-series trend plots discussed in Section 6.5 and presented in Appendix K does not indicate any significant changes in surface water quality between this sampling event and previous sampling events.

6.3 Comparison to SWQCs

MEDEP requested that the surface water results be compared to Maine's SWQCs. Table 5 lists detections in surface water samples collected during the 2019 sampling events above Maine's SWQC for freshwater criteria maximum concentration (CMC) and criterion continuous concentration (CCC).

TestAmerica detected aluminum at a concentration above the freshwater CCC (0.087 mg/L) at all ten surface water sampling locations during the May/June 2019 monitoring event. Aluminum was not detected at a concentration above the CMC (0.75 mg/L). The detection of aluminum at concentrations above the CCC at both upgradient and downgradient surface water locations indicates that the aluminum detections are not due to landfilling activities.

TestAmerica detected lead at concentrations above the CCC (0.00041 mg/L) at surface water locations in August and November 2019. Lead was detected above the CCC at all three upgradient locations. Lead was also detected above the CCC in downgradient surface water monitoring locations SW-102 (August only), SW-201 (August only), SW-203 (November only), SW-A (November only), and SW-B (August and November). Lead was detected at a concentration above the CMC (0.0152 mg/L) at upgradient location SW-9 in November 2019. The detection of lead at concentrations above the CCC at both upgradient and downgradient surface water locations indicates that the lead detections are not due to landfilling activities.

TestAmerica also detected iron at a concentration above the CCC (1.0 mg/L) in August and November 2019. TestAmerica detected iron at a concentration above the CCC at upgradient locations SW-101 (August and November), SW-9 (November only), and SW-C (November only). Iron was also detected above the CCC at two downgradient locations in August 2019 (SW-201 and SW-B) and one downgradient location (SW-A) in November 2019. The detections of iron at concentrations above the CCC at both upgradient and downgradient surface water locations indicates that the iron detections are not due to landfilling activities.

6.4 Tabulation of Trace Metal Detections

Table 4 lists detections of trace metals in surface water samples above analytical detection limits. Barium was detected above the detection limit in five of ten surface water sampling locations collected from during the May 2019 sampling event. Barium was detected at both upgradient and downgradient locations at similar concentrations, which suggests that barium occurs naturally in soils in the Norridgewock, Maine area. No CMC or CCC standards exist for barium. As discussed in Section 6.3, lead was also detected above the reporting limit at several locations in both August and November 2019. All lead detections are above the CCC (0.00041 mg/L).

6.5 Time-Series Plots and Visual Trend Analysis

As part of the annual sampling event summary report, the WQMP requires the development of time-series plots for each surface water sampling location for indicator parameters sodium, calcium, COD, and TOC. These plots

are presented in Appendix K. A qualitative visual review of the time-series trend plots indicates stable parameter concentrations in surface water.

6.6 Surface Water Flow

Surface water flow rates were observed on May 15, 2019 during the annual 2019 sampling event. The surface water flow rates are summarized below:

Surface Water Flow Rates

Surface Water Sampling Location	Flow Rate (feet/second)
SW-A	Too slow to measure
SW-B	3
SW-C	Still
SW-101	5
SW-102	1
SW-201	2
SW-203	1
SW-204	2
SW-801	1
SW-9	Still

7.0 LEACHATE COLLECTION/LEAK DETECTION

LC and LD flow data are provided in Appendix C. A tabulation of historical analytical results for each LC and LD sampling locations is provided in Appendix H.

7.1 Quantity and Quality of Leachate Generated

Appendix C includes the 2019 daily liquid flow rate measurement data and flow plots for the primary LC systems. Measured flows in the primary systems have been relatively constant or have decreased over time. Observed fluctuations in liquid flow result from normal seasonal variations in precipitation, landfill development and filling operations, and operational/final cover construction.

WMDSM began compositing leachate samples from inactive landfill phases (e.g., 10ALC and 10BLC are now sampled as 10ABLC) in April 2007 in accordance with the WQMP. Katahdin obtained uncomposited samples from individual landfill leachate collection sumps from active landfill Phases 8. Sample location 45LC was dry during the May/June 2019 sampling event and a sample was not collected.

Golder evaluated the leachate quality by preparing time-series plots of the concentrations of six indicator parameters; magnesium, potassium, calcium, chloride, sodium, and alkalinity (see Appendix K). Since 1998, the indicator parameter concentrations have remained relatively constant and with normal fluctuations attributable to seasonal changes in precipitation, landfilling activities, and operations/final cover construction. The active landfill

cell, Phase 8, leachate collection samples, show increases in alkalinity and some other parameters, however, it is not uncommon to observe increases in concentration of indicator parameter during the lifecycle of any landfill cell, especially during active filling. Golder considers the indicator parameter concentration trends observed in 8ALC, 8BLC, and 8CLC leachate samples to be consistent with the trends and concentrations observed in leachate samples from other WMDSM landfill cells and within normal fluctuations and trends for an active landfill cell. In 2019, trends observed in leachate collection samples from Phase 8 were consistent with those expected for landfill cells undergoing filling or covering activities.

Golder also evaluated analytical results for the asbestos landfill toe drain (ABTD). The graph of the indicator parameter concentrations from these samples is provided in Appendix K. The graph shows that indicator parameter concentrations in ABTD toe drain samples have remained essentially unchanged since 1996.

7.2 Quantity and Quality of Liquid in the Leak Detection and Removal System

Appendix C includes the 2019 daily liquid flow rate measurement data and flow plots for the secondary LD collection system. Measured flows in the leak detection sumps were relatively constant during the monitoring period.

WMDSM began compositing leak detection samples in April 2007 for the cells within each inactive landfill phase at the facility (e.g., 10ALD and 10BLD are now sampled as 10ABLD). In June 2019, Katahdin did not collect a sample from 4ABLD and 5ABLD because the locations were dry at the time of the sampling[2].

Golder evaluated the leak detection sample quality by preparing time-series trend plots of the indicator parameter concentrations for samples collected from the leak detection sumps (see Appendix K). In general, the indicator parameter concentrations in 2019 remained constant or slightly decreased.

8.0 WICK DRAINS

A tabulation of historical results for wick drain samples locations 9WD, 8AWD, and 8BCWD is provided in Tables 6, 7, and 8. Golder compared the results to CCCs and MEGs.

Arsenic was detected at a concentration above the MEG of 0.01 mg/L in the total and dissolved metals sample from 8BCWD from all 2019 sample events and above the CCC of 0.15 mg/L in the total sample collected in August 2019 and both the total and dissolved samples collected in November 2019 . Copper was detected just above the CCC of 0.00236 mg/L but below the MEG of 0.5 mg/L in the June 2019 9WD (0.0033 mg/L). Iron was detected above the CCC of 1.0 mg/L, but below the MEG of 5.0 mg/L in the June 2019 sample from 8AWD. Iron was detected above both the CCC and the MEG in all total and dissolved samples from 8BCWD. Manganese was detected above the MEG of 0.3 mg/L in the June 2019 samples collected from 9WD and 8AWD, and all the total and dissolved samples from 8BCWD. Sodium was detected above the MEG of 20 mg/L in all the total and dissolved samples from 8BCWD. Ammonia was detected above the CCC of 3 mg/L in all samples collected in 2019 from 8BCWD. No other parameters were detected at a concentration above MEGs or CCCs during the 2019 sampling events.

VOCs benzene and chloroethane were detected in the sample collected from 8BCWD in June 2019. VOCs chloroethane and methylene chloride were detected in the sample collected from 8BCWD in August 2019 and

[2] These two sampling locations have been dry since late 2005.

chloroethane was detected in the sample collected form 8BCWD in November 2019. All VOC detections were at low levels (i.e., near the detection limit and below their respective MEGs). No VOCs were detected in any other wick drain samples in 2019.

9.0 LANDFILL GAS MIGRATION MONITORING

WMDSM screens 13 permanent gas probes on a quarterly basis for percent oxygen (%O_2) and percent methane (%CH_4) to assess the potential for landfill gas migration. Monitoring data for 2019 are provided in Appendix L. Methane was detected at a low level at MHLMH-8F (0.1 %) in March, September, and December 2019 and at MHLMH-8G (0.1%) in December 2019. Methane was not detected at any other permanent gas probes. The 2019 gas probe screening results do not indicate migration of landfill gas.

WMDSM screens six manhole structures quarterly for %O_2, %CH_4, percent lower explosive limit (LEL), and hydrogen sulfide concentration (in parts per million by volume, ppmv) using a four-gas meter. The manhole screening data for 2019 is provided in Appendix L. The highest percent LEL recorded in 2019 was 0.2% and the highest percent CH_4 recorded in 2019 was 0.4%. Hydrogen sulfide was not detected in any of the manholes. The 2019 manhole structure screening results do not indicate migration of landfill gas.

10.0 CHANGES TO THE WATER QUALITY MONITORING PLAN

On June 17, 2017, MEDEP approved the statistical analysis plan. WMDSM submitted WQMP Revision 6.4, to reflect MEDEP request to submit one annual report in April each year to meet all reporting requirements approved on October 31, 2019. The MEDEP approved Revision 6.4 of the WQMP in an email dated November 14, 2019. All sampling in 2019, was completed according to the WQMP Revision 6.3 and the WQMP Revision 6.4. No changes to the monitoring locations, frequencies or parameters are proposed at this time.

11.0 SUMMARY AND CONCLUSIONS

In accordance with WMDSM's WQMP (Revision 6.4) for the Crossroads Landfill, the 2019 sampling events occurred during April/May/June, August, and November/December 2019. The following summarizes the findings and conclusions of this sampling event:

11.1 Groundwater

- A comparison of 2019 analytical results to historical values identified 52 new maximum and 45 new minimum values, which occurred at both upgradient and downgradient wells. A qualitative review of the new maximum and minimum concentration values does not indicate changes in groundwater quality that require action.
- TestAmerica did not detect TSS at a concentration above 50 mg/L in any of the 2019 groundwater samples.
- TestAmercia did not detect turbidity values above 50 NTUs in any of the 2019 groundwater samples.
- TestAmercia calculated the cation/anion balances to be within 10% for the majority of groundwater sampling locations, however, the calculated cation/anion balances were outside of 10% for one or more samples collected from three upgradient monitoring wells and six downgradient monitoring wells in 2019.
- TestAmerica detected arsenic concentrations above the MEG and MCL standards in at least one groundwater sample collected in 2019 from four upgradient and eleven downgradient monitoring wells. These results are consistent with results from previous sampling events. The only statistically significant increasing trend for arsenic identified at any of these wells was in upgradient bedrock well 617C.

- TestAmerica detected aluminum, iron, manganese, and sodium at concentrations above their respective MEG, MCL and/or SMCL standards in groundwater samples collected from both upgradient and downgradient monitoring wells. None of these detections are associated with statistically significant increases, except for manganese in well 624B, iron in well 106CR, and iron and manganese in 107BR. The detection of these metals at upgradient monitoring wells and lack of increasing trends suggests that the detected concentrations are not the result of a landfill release.
- TestAmerica did not detect VOCs at concentrations above the laboratory reporting limit in any of the groundwater samples analyzed for VOCs in 2019.
- Eagon completed a statistical analysis of groundwater quality results for the Crossroads Landfill in accordance with the “Statistical Analysis Program for Groundwater Quality Monitoring” for the Crossroads Landfill. The following summarizes the results of these statistical analysis:
  - No VOCs were detected at or above the reporting limit during the 2019 annual sampling event.
  - Statistically significant trends were identified in wells upgradient of Phases 1 through 10. These trends are consistent with longer-term fluctuations in upgradient groundwater quality. The variability is most pronounced in upgradient bedrock water quality.
  - Few statistically significant trends were identified in wells upgradient of Phases 11 and 12.
  - A mix of increasing and decreasing statistically significant parameter trends was identified in phreatic and till wells located downgradient of Phases 1 through 10, which are consistent with the previously identified historical episodic releases in the area of Phase 1 through 10.
  - Identified statistically significant parameter trends in phreatic wells located down gradient of Phase 11 and to a lesser extent Phase 12 are interpreted to be the result of the elimination of local precipitation recharge to the phreatic unit and the flow and mixing of connate water from the underlying gray clay into the phreatic unit as a result of increased pore pressures in the gray clay from loading (i.e., landfill construction, waste placement, and final closure construction).
  - Results of the interwell prediction limit evaluation for Phases 11 and 12 are consistent with the results of the trend analysis, indicating a general change in water quality beneath the landfilled areas as a result of the elimination of local precipitation recharge and the mixing of pore water from the gray clay.
  - The linear regression analysis for ORP indicates little statistically significant change in ORP values in site groundwater.

11.2 Surface Water

- A comparison with historical data found three new minimums and 22 new maximums in both upgradient and downgradient surface water locations. A qualitative review of this information does not indicate any significant changes in surface water quality.
- TestAmerica detected aluminum, iron, and lead above the CCC in upgradient and downgradient locations during this monitoring event. The detection of these metals at upgradient monitoring wells indicates that the detections of aluminum, iron and lead at concentrations above CCs are not the result of landfilling activities.

- TestAmerica detected the trace metal barium in most of the surface water samples. The widespread detections of barium in both upgradient and downgradient locations at similar concentrations suggest that barium occurs naturally in the soils in this area.
- Updated time-series plots indicate stable concentrations of sodium, calcium, COD and TOC in surface water samples.

11.3 Leachate Collection/Leak Detection

Measured flows in the primary and secondary systems have been relatively constant or have decreased over time. Observed fluctuations in liquid flow are the result of normal seasonal variations in precipitation, landfill development and filling operations, and operational/final cover construction. Flow rates have not changed significantly since 2018.

Since 1998, the indicator parameter concentrations have remained relatively constant and with normal fluctuations attributable to seasonal changes in precipitation, landfilling activities, and operations/final cover construction. In 2019, trends observed in leachate collection samples from Phase 8 were consistent with those expected for landfill cells undergoing filling or covering activities and have not changed significantly since 2018.

11.4 Wick Drain

Results of the wick drain monitoring do not indicate significant changes since 2018.

11.5 Landfill Gas Migration Monitoring

Monitoring of the permanent gas probes and manhole structures do not indicate migration of landfill gas.

11.6 Conclusions

Results of the 2019 sampling events indicate that no changes in water quality require action and there is no evidence of landfill gas migration.

Notes:

mg/l = milligrams per liter

ug/L= microgram per liter

MCL= maximum contaminant level

SMCL= secondary MCL, standards have been adopted primarily for aesthetic or cosmetic effects, not an enforceable federal guideline.

MEG = maximum exposure guideline

T/D= total or dissolved fraction

FIGURE 3

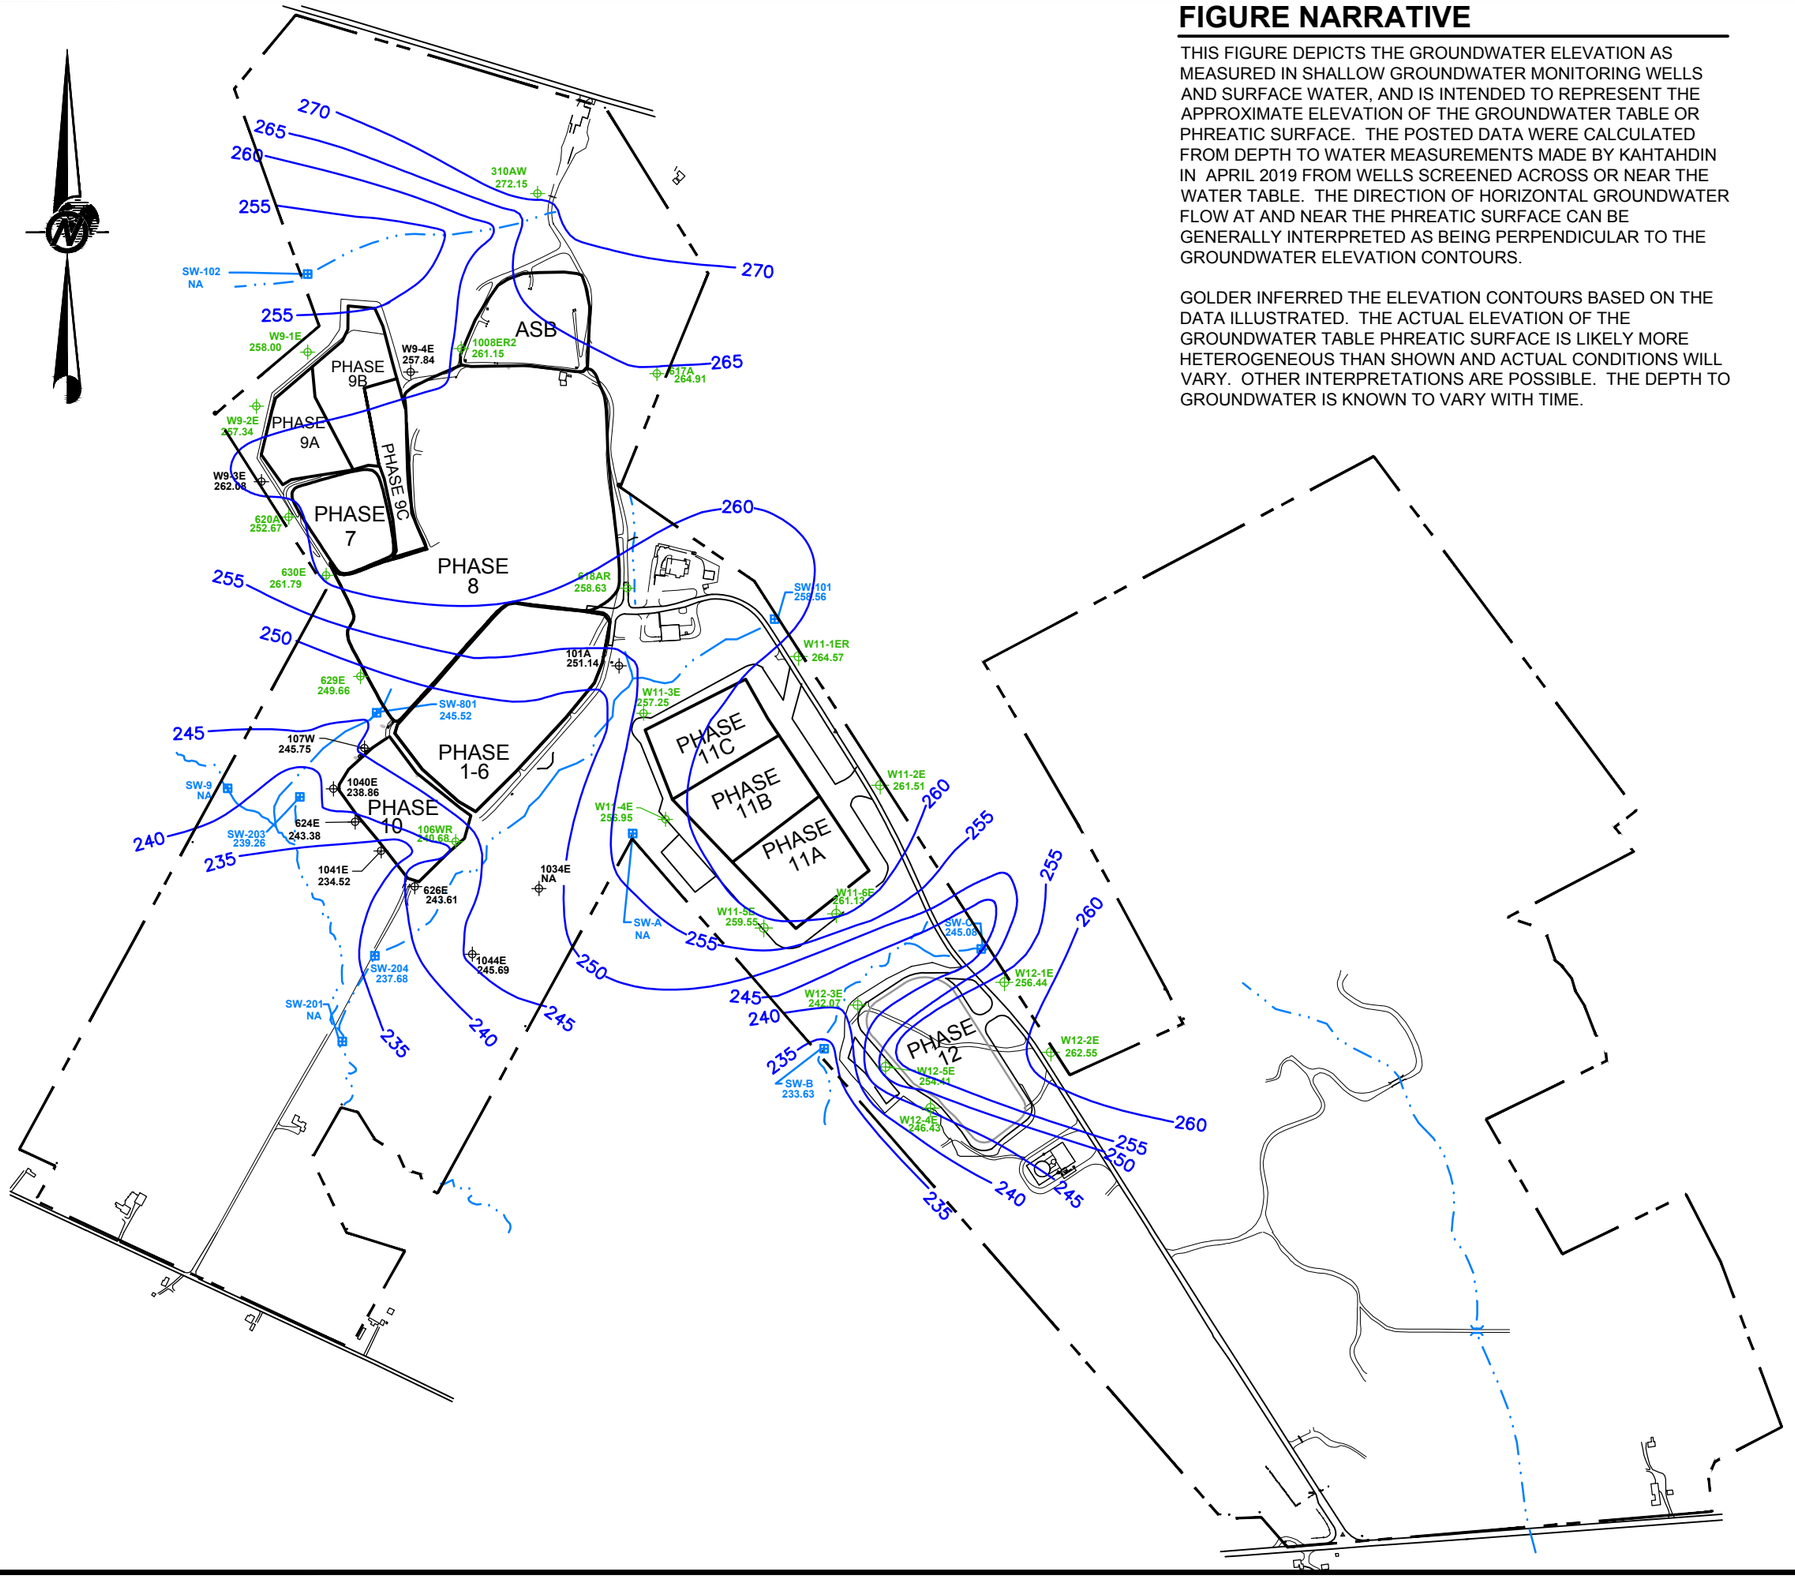

FIGURE NARRATIVE

THIS FIGURE DEPICTS THE GROUNDWATER ELEVATION AS MEASURED IN SHALLOW GROUNDWATER MONITORING WELLS AND SURFACE WATER, AND IS INTENDED TO REPRESENT THE APPROXIMATE ELEVATION OF THE GROUNDWATER TABLE OR PHREATIC SURFACE. THE POSTED DATA WERE CALCULATED FROM DEPTH TO WATER MEASUREMENTS MADE BY KAHTAHDIN IN APRIL 2019 FROM WELLS SCREENED ACROSS OR NEAR THE WATER TABLE. THE DIRECTION OF HORIZONTAL GROUNDWATER FLOW AT AND NEAR THE PHREATIC SURFACE CAN BE GENERALLY INTERPRETED AS BEING PERPENDICULAR TO THE GROUNDWATER ELEVATION CONTOURS.

GOLDER INFERRED THE ELEVATION CONTOURS BASED ON THE DATA ILLUSTRATED. THE ACTUAL ELEVATION OF THE GROUNDWATER TABLE PHREATIC SURFACE IS LIKELY MORE HETEROGENEOUS THAN SHOWN AND ACTUAL CONDITIONS WILL VARY. OTHER INTERPRETATIONS ARE POSSIBLE. THE DEPTH TO GROUNDWATER IS KNOWN TO VARY WITH TIME.

Equipment Needed:
Solinst
Meters YSI (w/flow cell) & Lamotte
Peristaltic Pump
tubing
battery

Keys:
0702

Meter used: YSI (556) 650 (circle one)
Lamotte 2020 (2020+) (circle one)
Calibration: See calibration sheet dated: 5/21/19

Bottles: see Test America's "Bottle Order Information & COC" appropriate for this event

Collect the water samples at each location following the parameter order:
1) VOC
2) TOC
3) BNA or SVOA
4) PCB
5) T-Metals
6) All other Wet Chemistry
7) T or F Coliforms

Well Condition:
Damaged: Yes (No)
Locked: (Yes) No
Flagged: Yes (No)
Well Clearly Labeled:
Outside: (Yes) No
Inside: Yes (No)
Cap free of rust: (Yes) No
See Well Information Form for more comments

Comments:

Sampled by (print/sign): Agustin Loureiro

Instructions
See Waste Management's "Groundwater, Surface Water and Leachate Sampling Guide" for more detailed instructions

Calibration: Intake - Static X .0025 = Gallons
Gallons X 3785 = mLs (Tubing Vol. mLs)

Well Stabilization Criteria:
pH: +\- 10% (.10 Katahdin)
Temp: +\- 0.5 °C
Spec Cond: +\- 10% umho
ORP: +\- 10% (10 millivolts Katahdin)
Comments: * under 10 NTU's 3 readings within 1.0 NTU
Turb: +\- 10% NTU *
DO: +\- 10% mg/L
Drawdown: +\- 0.5 ft

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	QC Results not within control limits
U	Not Detected above the associated Quantitaion Limit

Metals

Qualifier	Qualifier Description
BL	Compound is found in the associated method blank as well as inorganic sample.
U	Not Detected above the associated Quantitaion Limit

General Chemistry

Qualifier	Qualifier Description
*	QC Results not within control limits
BL	Compound is found in the associated method blank as well as inorganic sample.
U	Not Detected above the associated Quantitaion Limit

Qualifier	Qualifier Description
U	Not Detected above the associated Quantitaion Limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Receipt
The samples were received on 5/4/2019 9:00 AM, 5/14/2019 9:45 AM, 5/15/2019 10:00 AM, 5/16/2019 9:10 AM, 5/17/2019 9:00 AM, 5/21/2019 9:30 AM, 5/22/2019 9:15 AM, 5/23/2019 9:30 AM, 6/5/2019 9:00 AM, 6/6/2019 9:00 AM, 6/8/2019 11:00 AM, 6/11/2019 9:00 AM, 6/14/2019 9:00 AM and 6/15/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 21 coolers at receipt time were 1.8º C, 2.1º C, 2.2º C, 2.4º C, 2.5º C, 2.5º C, 2.6º C, 2.6º C, 2.6º C, 2.6º C, 2.7º C, 2.8º C, 2.8º C, 2.8º C, 2.9º C, 3.0º C, 3.0º C, 3.1º C, 3.2º C, 3.3º C and 3.6º C.

GC/MS VOA
Method(s) 8260C: The Laboratory Control Sample (LCS) was just outside laboratory/project quality control limits for the following analyte: Chloromethane. All other spike recoveries and quality control indicators, including sample specific surrogate recoveries, were acceptable. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Reanalysis was not performed due to holding time limitations. The following samples are impacted: 620A (480-153687-1), DUP-GW-01 (480-153687-2), 620C (480-153687-3) and TB-01 (480-153687-4).

Method(s) 8260C: The laboratory control sample (LCS) for analytical batch 480-475323 recovered outside control limits for the following analyte: Tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 480-477169 recovered outside control limits for the following analyte: Tetrachloroethene. This analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The following samples are impacted: TB-07 (480-154721-2) and W9-2E (480-154721-4).

Method(s) 8260C: Due to the coelution of Ethyl Acetate with 2-Butanone in the full spike solution, these analytes exceeded control limits in the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) associated with batch 480-477169 The following samples were affected : TB-07 (480-154721-2) and W9-2E (480-154721-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The method blank for preparation batch 480-473449 and analytical batch 480-474735 contained Total Iron above the client detection limit. This target analyte concentration was less than the laboratory's standard reporting limit (RL); therefore, re-extraction and/or re-analysis of samples 629B (480-153523-1) and 630E (480-153523-2) was not performed.

Method(s) 6010C: The method blank for preparation batch 480-472271 contained Total Iron above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples W11-6E (480-152997-1) were not performed.

Method(s) 6010C: The Total Barium, Iron, Magnesium, and Sodium results reported for the following sample do not concur with results previously reported for this site: 107BR (480-153888-2). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Manganese results reported for the following sample do not concur with results previously reported for this site: W11-1ER (480-153888-6). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Barium and Iron results reported for the following sample do not concur with results previously reported for this site: DUP-GW-02 (480-153888-4). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Iron and Manganese results reported for the following sample do not concur with results previously reported for this site: 1008ER2 (480-153929-2). Reanalysis was performed, and the results confirmed.

Job ID: 480-152997-1 (Continued)

Laboratory: Eurofins TestAmerica, Buffalo (Continued)

Method(s) 6010C: The Total Iron result reported for the following sample did not concur with results previously reported for this site: 1041B (480-153454-2). Reanalysis was performed, and the result confirmed.

Method(s) 6010C: The Total Iron results reported for the following sample do not concur with results previously reported for this site: 104C (480-154721-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Manganese results reported for the following sample do not concur with results previously reported for this site: W12-1B (480-154465-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The method blank for preparation batch 480-478126 and analytical batch 480-478540 contained Total Iron above the client reporting limit. This target analyte concentration was less than the laboratory's standard reporting limit (RL); therefore, re-extraction and/or re-analysis of samples 310AW (480-154949-1) and 624B (480-154949-2) was not performed.

Method(s) 6010C: The Total Iron result reported for the following sample did not concur with results previously reported for this site: 310D (480-154908-2). Reanalysis was performed, and the result confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method(s) SM 2540D: The results reported for the following sample do not concur with results previously reported for this site: 618AR (480-153454-6). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 2540D: Reanalysis of the following samples were performed outside of the analytical holding time to confirm the original results : 1040B (480-153454-1) and 1134B (480-153454-3). Results do not confirrm, both sets of data have been reported.

Method(s) 353.2: The results reported for the following sample do not concur with results previously reported for this site: 1040B (480-153454-1), 106DR (480-153786-2), 104D (480-154465-3). Reanalysis was performed, and the result(s) confirmed.

Method(s) 353.2: The laboratory control sample (LCS) for analytical batch 480-473078 recovered outside control limits for the following analyte: Nitrite as N. This analyte was biased high in the LCS was not detected above the reporting limit in the associated sample; therefore, the data have been reported. The following samples are impacted: 630E (480-153523-2).

Method(s) 353.2: The laboratory control sample (LCS) for analytical batch 480-474275 recovered outside control limits for the following analytes: <AffectedAnalytes>. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 350.1: The results reported for the following samples do not concur with results previously reported for this site: 1041B (480-153454-2), 617C (480-153454-5), 620A (480-153687-1), 630B (480-153688-1), 106CR (480-153786-1), 106WR (480-153786-3), 1008BR2 (480-153929-1), W12-4E (480-153929-6), TRANS (480-154908-3) and 624B (480-154949-2). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 5310C, SM 5310D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 480-478371 recovered outside control limits for the following analytes: total organic carbon. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. 1008BR2 (480-153929-1), DUP-GW-03 (480-153929-3), W12-4B (480-153929-5) and W12-4E (480-153929-6)

Method(s) 9251: The results reported for the following samples do not concur with results previously reported for this site: 106WR (480-153786-3), 107BR (480-153888-2) and 624B (480-154949-2). Reanalysis was performed, and the result(s) confirmed.

Method(s) SM 5310C: The results reported for the following sample do not concur with results previously reported for this site: 107BR (480-153888-2) and W12-3E (480-154654-2). Reanalysis was performed, and the result(s) confirmed.

Method(s) 410.4: The Chemical Oxygen Demand results reported for the following sample do not concur with results previously reported for this site: 1008BR2 (480-153929-1) and 624B (480-154949-2). Reanalysis was performed, and the result(s) confirmed. Higher than

Accreditation/Certification Summary

Client: Waste Management
Project/Site: Crossroads ME-Ann GW

Job ID: 480-152997-1

Laboratory: Eurofins TestAmerica, Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
Maine	State Program	1	NY00044	12-04-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
9038		Ground Water	Sulfate
9038		Water	Sulfate
9040C		Ground Water	pH
9040C		Ground Water	Temperature
9251		Ground Water	Chloride
9251		Water	Chloride
Field Sampling		Ground Water	Depth to Water from Top of Casing
Field Sampling		Ground Water	Field EH/ORP
Field Sampling		Ground Water	Field pH
Field Sampling		Ground Water	Ground Water Elevation
Field Sampling		Ground Water	Oxygen, Dissolved
Field Sampling		Ground Water	Specific Conductance
Field Sampling		Ground Water	Temperature
Field Sampling		Ground Water	Turbidity
Field Sampling		Water	Depth to Water from Top of Casing
Field Sampling		Water	Field EH/ORP
Field Sampling		Water	Field pH
Field Sampling		Water	Ground Water Elevation
Field Sampling		Water	Oxygen, Dissolved
Field Sampling		Water	Specific Conductance
Field Sampling		Water	Temperature
Field Sampling		Water	Turbidity
SM 1030E		Ground Water	Anion/Cation Balance
SM 1030E		Ground Water	Calculated TDS
SM 1030E		Ground Water	TDS Ratio
SM 1030E		Ground Water	TDS to Conductivity Ratio
SM 1030E		Water	Anion/Cation Balance
SM 1030E		Water	Calculated TDS
SM 1030E		Water	TDS Ratio
SM 1030E		Water	TDS to Conductivity Ratio

Laboratory: Eurofins TestAmerica, Savannah

The accreditations/certifications listed below are applicable to this report.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-152997-1
Project/Site: Crossroads ME-Ann GW

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Analyte	Matrix	Prep Type	Unit	Client RL	Lab PQL
6010C	Arsenic	Ground Water	Total/NA	mg/L	0.0090	0.015
6010C	Arsenic	Water	Total/NA	mg/L	0.0090	0.015
6010C	Calcium	Ground Water	Total/NA	mg/L	0.15	0.50
6010C	Calcium	Water	Total/NA	mg/L	0.15	0.50
6010C	Iron	Ground Water	Total/NA	mg/L	0.030	0.05
6010C	Iron	Water	Total/NA	mg/L	0.030	0.05
6010C	Lead	Ground Water	Total/NA	mg/L	0.0050	0.01
6010C	Lead	Water	Total/NA	mg/L	0.0050	0.01
6010C	Potassium	Ground Water	Total/NA	mg/L	0.20	0.50
6010C	Potassium	Water	Total/NA	mg/L	0.20	0.50
6010C	Sodium	Ground Water	Total/NA	mg/L	0.40	1.0

RE: Katahdin Lab Number: SM5950
Project ID: Waste Management Crossroads
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): June 13, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Leslie Dimond

Leslie Dimond - Quality Assurance Officer

06/25/2019

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

RE: Katahdin Lab Number: SM7305
Project ID: Waste management Crossroads ME
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): July 17, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Leslie Dimond

Leslie Dimond - Quality Assurance Officer

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

URANIUM	U	0.000200	mg/L	0.00100	0.000015	LMG23A

U The analyte was not detected in the sample at a level greater than the method detection limit.

J The analyte was detected in the sample at a concentration greater than the method detection limit, but less than the laboratory's Practical Quantitation Level.

H The analyte was detected in the sample at a concentration greater than the laboratory's acceptance limit.

LABORATORY CONTROL SAMPLE REPORT

Sample ID: LCSWMG23IMW1 **Batch ID:** MG23IMW1 **Work Order:** SM7305

Element Name	True Value	Result	Units	Recovery(%)	Flag	Limits (%)		File
URANIUM	0.100	0.100	mg/L	100.0		80	120	LMG23A

H Laboratory control sample recovery is greater than the laboratory's acceptance limit.

L Laboratory control sample recovery is less than the laboratory's acceptance limit.

MATRIX SPIKE / MATRIX SPIKE DUPLICATE QC SUMMARY

Sample ID: SM7305-002

Symbol	Sample Result	Units	Spike Added	Spike Result	Spike Rec.(%)	Note	Spike Dup Added	Spike Duplicate Result	Spike Duplicate Rec.(%)	Note	RPD(%)	Note
U U	0.00100	mg/L	0.100	0.103	103 %		0.100	0.101	101 %		1.96 %	

M1 Matrix spike recovery is outside the laboratory's acceptance range indicating potential sample matrix interference and potential bias of reported value for this parameter.

M2 Matrix spike recovery is outside the laboratory's acceptance range. The spike concentration is significantly below the sample concentration and cannot be distinguished from the sample signal.

3 Matrix spike analysis cannot be quantified due to severe matrix interferences.

R1 Precision of replicate analysis as measured by RPD is outside the laboratory's acceptance range for this parameter. Sample homogeneity may be a factor.

5 Because of the large uncertainty associated with measurements made near the detection level, there is no acceptance range for relative percent difference.

Katahdin Analytical Services, LLC.

FIELD INFORMATION FORM

WASTE MANAGEMENT

Site Name: CROSSROADS

Site No.: | | | | |

Sample Point: GW11-6F (Sample ID)

This Waste Management Field Information Form is Required
This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID: _____

PURGE INFO

PURGE DATE (MM DD YY)	PURGE TIME (2400 Hr Clock)	ELAPSED HRS (hrs:min)	WATER VOL IN CASING (Gallons)	ACTUAL VOL PURGED (Gallons)	WELL VOLs PURGED
05 03 19	13:42	:25	0	13	

Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ Water Vol in Tubing/Flow Cell and Tubing/Flow Cell Vols Purged. Mark changes, record field data, below.

PURGE/SAMPLE EQUIPMENT

Purging and Sampling Equipment . . . Dedicated: (Y) or N

Purging Device: B — A-Submersible Pump, B-Peristaltic Pump, C-QED Bladder Pump, D-Bailer, E-Piston Pump, F-Dipper/Bottle

Sampling Device: B

X-Other:

Filter Device: Y or (N) — 0.45 µ or _____ µ (circle or fill in)

Filter Type: — A-In-line Disposable, B-Pressure, C-Vacuum, X-Other

Sample Tube Type: — A-Teflon, B-Stainless Steel, C-PVC, D-Polypropylene, X-Other:

WELL DATA

Well Elevation (at TOC)	Depth to Water (DTW) (from TOC)	Groundwater Elevation (site datum, from TOC)
2748.9 (ft/msl)	13.72 (ft)	261.17 (ft/msl)

Total Well Depth (from TOC)	Stick Up (from ground elevation)	Casing ID	Casing Material
200.0 (ft)	3.49 (ft)	2 (in)	PVC

Note: Total Well Depth, Stick Up, Casing Id. etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm@25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
1st		1st	1st					
2nd		2nd	2nd					
3rd		3rd	3rd					
4th		4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: Units
05 03 19	6.24	130	7.2				

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

Sample Appearance: NORMAL Odor: NONE Color: CLEAR Other:

Weather Conditions (required daily, or as conditions change): Direction/Speed: CALM Outlook: CLOUDY Precipitation (Y) or N

Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

Date	Name	Signature	Company
05/03/19	NICK ADAMS		EAS

DISTRIBUTION: WHITE/ORIGINAL - Stays with Sample, YELLOW - Returned to Client, PINK - Field Copy

FIELD INFORMATION FORM

WASTE MANAGEMENT

Note: Total Well Depth, Stick Up, Casing Id. etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm@25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
1st		1st	1st					
2nd		2nd	2nd					
3rd		3rd	3rd					
4th		4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: Units
05/16/19	8.50	212	9.9	0.9	2.2	102.9	

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

FIELD COMMENTS

Sample Appearance: Clear
Odor: None
Color: Clear
Other:
Weather Conditions (required daily, or as conditions change):
Direction/Speed: N/A
Outlook: Cloudy
Precipitation: Y or (N)
Specific Comments (including purge/well volume calculations if required):

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

FIELD INFORMATION FORM

WASTE MANAGEMENT

Site Name: CROSSROADS

Site No.:

Sample Point: GW-DUP-04 (Sample ID)

This Waste Management Field Information Form is Required
This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID:

PURGE INFO

PURGE DATE (MM DD YY)	PURGE TIME (2400 Hr Clock)	ELAPSED HRS (hrs:min)	WATER VOL IN CASING (Gallons)	ACTUAL VOL PURGED (Gallons)	WELL VOLs PURGED

Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ Water Vol in Tubing/Flow Cell and Tubing/Flow Cell Vols Purged. Mark changes, record field data, below.

PURGE/SAMPLE EQUIPMENT

Purging and Sampling Equipment . . . Dedicated: (Y) or N

Purging Device: B

Sampling Device: B

A-Submersible Pump, B-Peristaltic Pump, C-QED Bladder Pump, D-Bailer, E-Piston Pump, F-Dipper/Bottle

X-Other:

Filter Device: Y or (N) 0.45 µ or ____ µ (circle or fill in)

Filter Type:

A-In-line Disposable, B-Pressure, C-Vacuum, X-Other

Sample Tube Type:

A-Teflon, B-Stainless Steel, C-PVC, D-Polypropylene, X-Other:

WELL DATA

Well Elevation (at TOC) (ft/msl)

Depth to Water (DTW) (from TOC) (ft)

Groundwater Elevation (site datum, from TOC) (ft/msl)

Total Well Depth (from TOC) (ft)

Stick Up (from ground elevation) (ft)

Casing ID (in)

Casing Material

Note: Total Well Depth, Stick Up, Casing Id. etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm@25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
1st		1st	1st					
2nd		2nd	2nd					
3rd		3rd	3rd					
4th		4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: Units
06/07/19	6.62	329	11.4	0.0	1.9	93.9	

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

FIELD COMMENTS

Sample Appearance: NORMAL Odor: NONE Color: CLEAR Other:

Weather Conditions (required daily, or as conditions change): Direction/Speed: CALM Outlook: SUNNY Precipitation: Y or (N)

Specific Comments (including purge/well volume calculations if required):

COLLECTED AT WIZ-3E

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ Water Vol in Tubing/Flow Cell and Tubing/Flow Cell Vols Purged. Mark changes, record field data, below.

PURGE/SAMPLE EQUIPMENT

Purging and Sampling Equipment . . . Dedicated: (Y) or N

Purging Device: A

Sampling Device: ~~A~~F

X-Other:

A-Submersible Pump, B-Peristaltic Pump, C-QED Bladder Pump, D-Bailer, E-Piston Pump, F-Dipper/Bottle

Filter Device: Y or (N) 0.45 µ or ____ µ (circle or fill in)

Filter Type: A-In-line Disposable, B-Pressure, C-Vacuum, X-Other ____

Sample Tube Type: A-Teflon, B-Stainless Steel, C-PVC, D-Polypropylene, X-Other: ____

WELL DATA

Well Elevation (at TOC) (ft/msl)	Depth to Water (DTW) (from TOC) (ft)	Groundwater Elevation (site datum, from TOC) (ft msl)

Total Well Depth (from TOC) (ft)	Stick Up (from ground elevation) (ft)	Casing ID (in)	Casing Material

Note: Total Well Depth, Stick Up, Casing Id. etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm@25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
	1st	1st	1st					
	2nd	2nd	2nd					
	3rd	3rd	3rd					
	4th	4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: Units
06/13/19	8.68	133	9.5	0.8	3.2	210.6	

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

FIELD COMMENTS

Sample Appearance: Normal Odor: None Color: Clear Other:

Weather Conditions (required daily, or as conditions change): Direction/Speed: SE 5-10 Outlook: Cloudy Precipitation: Y or N

Specific Comments (including purge/well volume calculations if required):

PURGED 15 MINUTES BEFORE SAMPLING

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	KAS
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	KAS
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

Metals

Qualifier	Qualifier Description
U	Not Detected above the associated Quantitaion Limit

General Chemistry

Qualifier	Qualifier Description
*	QC Results not within control limits
BL	Compound is found in the associated method blank as well as inorganic sample.
U	Not Detected above the associated Quantitaion Limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 5/16/2019 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.2º C and 2.9º C.

Metals
Method(s) 6010C: The Total Potassium results reported for the following samples do not concur with results previously reported for this site: SW-101 (480-153594-2), SW-204 (480-153594-6) and SW-B (480-153594-10). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Calcium, Magnesium, Manganese, and Sodium results reported for the following sample do not concur with results previously reported for this site: SW-801 (480-153594-7). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Calcium, Magnesium, and Potassium results reported for the following sample do not concur with results previously reported for this site: SW-9 (480-153594-8). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Total Iron and Manganese results reported for the following sample do not concur with results previously reported for this site: SW-A (480-153594-9). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6010C: The Iron, Manganese, and Potassium results reported for the following sample do not concur with results previously reported for this site: SW-C (480-153594-11). Reanalysis was performed, and the result(s) confirmed.

Method(s) 6020A: The Total Lead results reported for the following samples do not concur with results previously reported for this site: SW-101 (480-153594-2) and SW-C (480-153594-11). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 310.2: The results reported for the following sample do not concur with results previously reported for this site: SW-801 (480-153594-7). Reanalysis was performed, and the result(s) confirmed.

Method(s) 350.1: The results reported for the following sample do not concur with results previously reported for this site: SW-B (480-153594-10). Reanalysis was performed, and the result(s) confirmed.

Method(s) 353.2: The results reported for the following sample do not concur with results previously reported for this site: SW-801 (480-153594-7). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-153594-1
Project/Site: Crossroads ME: Annual SW

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Analyte	Matrix	Prep Type	Unit	Client RL	Lab PQL
6010C	Aluminum	Surface Water	Total/NA	mg/L	0.080	0.20
6010C	Arsenic	Surface Water	Total/NA	mg/L	0.0090	0.015
6010C	Calcium	Surface Water	Total/NA	mg/L	0.15	0.50
6010C	Copper	Surface Water	Total/NA	mg/L	0.0020	0.01
6010C	Iron	Surface Water	Total/NA	mg/L	0.030	0.05
6010C	Potassium	Surface Water	Total/NA	mg/L	0.20	0.50
6010C	Sodium	Surface Water	Total/NA	mg/L	0.40	1.0
6020A	Lead	Surface Water	Total/NA	mg/L	0.00040	0.001
9251	Chloride	Surface Water	Total/NA	mg/L	0.50	1.0
SM 2540C	Total Dissolved Solids	Surface Water	Total/NA	mg/L	5.0	10

Sample Tube Type: —

A-Teflon, B-Stainless Steel, C-PVC, D-Polypropylene, X-Other:

WELL DATA

Well Elevation (at TOC): ____ (ft/msl)

Depth to Water (DTW) (from TOC): 058 (ft)

Groundwater Elevation (site datum, from TOC): ____ (ft/msl)

Total Well Depth (from TOC): ____ (ft)

Stick Up (from ground elevation): ____ (ft)

Casing ID: ____ (in)

Casing Material: ____

Note: Total Well Depth, Stick Up, Casing Id. etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm@25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
		1st	1st					
		2nd	2nd					
		3rd	3rd					
		4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: FLOW Units FT/SEC
05/15/19	6.41	147	12.7	16	10.0	125	1.0

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

Sample Appearance: NORMAL Odor: NONE Color: LT YELLOW Other:

Weather Conditions (required daily, or as conditions change): Direction/Speed: N 10-15 Outlook: CLOUDY Precipitation: (Y) or N

Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS

TAKEN @ SW-102

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

Purging Device:

Sampling Device: F

X-Other:

A-Submersible Pump, B-Peristaltic Pump, C-QED Bladder Pump, D-Bailer, E-Piston Pump, F-Dipper/Bottle

Filter Device: Y or (N) 0.45 µ or ____ µ (circle or fill in)

Filter Type:

A-In-line Disposable, B-Pressure, C-Vacuum, X-Other

Sample Tube Type:

A-Teflon, B-Stainless Steel, C-PVC, D-Polypropylene, X-Other:

WELL DATA

Well Elevation (at TOC)	Depth to Water (DTW) (from TOC)	Groundwater Elevation (site datum, from TOC)
(ft/msl)	058 (ft)	(ft/msl)

Total Well Depth (from TOC)	Stick Up (from ground elevation)	Casing ID	Casing Material
(ft)	(ft)	(in)	

Note: Total Well Depth, Stick Up, Casing Id. etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm@25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
	1st	1st	1st					
	2nd	2nd	2nd					
	3rd	3rd	3rd					
	4th	4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: FLOW Units FT/SEC
05/15/19	6.41	147	12.2	1.6	1.00	125	1.0

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

FIELD COMMENTS

Sample Appearance: NORMAL Odor: NONE Color: ~~CLEAR~~ * Other:

Weather Conditions (required daily, or as conditions change): Direction/Speed: N 10-15 Outlook: CLOUDY Precipitation: (Y) or N

Specific Comments (including purge/well volume calculations if required):

* COLOR WAS LIGHT YELLOW.

Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: FLOW Units FT/SEC
05 15 19	5 7 9	8 5	8 0	2 7	1 0 2	1 0 0 7	3.0

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

FIELD COMMENTS

Sample Appearance: NORMAL Odor: NONE Color: CLEAR Other:

Weather Conditions (required daily, or as conditions change): Direction/Speed: N 10-15 Outlook: CLOUDY Precipitation: (Y) or N

Specific Comments (including purge/well volume calculations if required):

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

Date	Name	Signature	Company
05/15/19	NICK ADAMS		KAS
___/___/___			

DISTRIBUTION: WHITE/ORIGINAL - Stays with Sample, YELLOW - Returned to Client. PINK - Field Copy

FIELD INFORMATION FORM

WASTE MANAGEMENT

Site Name: CROSSROADS

Site No.:

Sample Point: SW-C (Sample ID)

This Waste Management Field Information Form is Required
This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID:

PURGE INFO

PURGE DATE (MM DD YY)	PURGE TIME (2400 Hr Clock)	ELAPSED HRS (hrs:min)	WATER VOL IN CASING (Gallons)	ACTUAL VOL PURGED (Gallons)	WELL VOLs PURGED

Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ Water Vol in Tubing/Flow Cell and Tubing/Flow Cell Vols Purged. Mark changes, record field data, below.

PURGE/SAMPLE EQUIPMENT

Purging and Sampling Equipment . . . Dedicated: (Y) or N

Filter Device: Y or (N) 0.45 µ or ____ µ (circle or fill in)

Purging Device: ~

Sampling Device: F

A-Submersible Pump, B-Peristaltic Pump, C-QED Bladder Pump, D-Bailer, E-Piston Pump, F-Dipper/Bottle

X-Other:

Filter Type: ~ (A-In-line Disposable, B-Pressure, C-Vacuum, X-Other)

Sample Tube Type: ~ (A-Teflon, B-Stainless Steel, C-PVC, D-Polypropylene, X-Other:)

WELL DATA

Well Elevation (at TOC)	Depth to Water (DTW) (from TOC)	Groundwater Elevation (site datum, from TOC)
(ft/msl)	045 (ft)	(ft/msl)

Total Well Depth (from TOC)	Stick Up (from ground elevation)	Casing ID	Casing Material
(ft)	(ft)	(in)	

Note: Total Well Depth, Stick Up, Casing Id. etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm@25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
	1st	1st	1st					
	2nd	2nd	2nd					
	3rd	3rd	3rd					
	4th	4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: FLOW Units FT/SEC
05/15/19	5.62	62	7.9	2.5	10.4	103.8	STILL

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

Client: Waste Management

Job Number: 480-153594-1

Login Number: 153594
List Number: 1
Creator: Stopa, Erik S

List Source: Eurofins TestAmerica, Buffalo

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	KAS
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

Definitions/Glossary

Client: Waste Management
Project/Site: Crossroads ME-Ann Leachate

Job ID: 480-154771-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Not Detected above the associated Quantitaion Limit

GC/MS Semi VOA

Qualifier	Qualifier Description
*	QC Results not within control limits
J	Indicates an estimated value.
U	Not Detected above the associated Quantitaion Limit

Metals

Qualifier	Qualifier Description
U	Not Detected above the associated Quantitaion Limit

General Chemistry

Qualifier	Qualifier Description
*	QC Results not within control limits
BL	Compound is found in the associated method blank as well as inorganic sample.
U	Not Detected above the associated Quantitaion Limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 6/12/2019 9:00 AM and 6/13/2019 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.6º C, 2.9º C and 3.2º C.

GC/MS VOA
Method(s) 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: 10ABLC (480-154771-7), 11ABCLC (480-154771-8), 123LC (480-154771-9), 7LC (480-154771-10), 9ABCLC (480-154771-11) and 12ABLC (480-154840-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 480-477905 and analytical batch 480-478204 recovered outside control limits for the following analytes: Benzoic acid.

Method(s) 8270D: The following sample required a dilution due to the nature of the sample matrix: 7LC (480-154771-10) and 12ABLC (480-154840-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8270D: The following samples were diluted due to the nature of the sample matrix: 10ABLC (480-154771-7), 11ABCLC (480-154771-8), 123LC (480-154771-9), 7LC (480-154771-10), 9ABCLC (480-154771-11) and 12ABLC (480-154840-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The following sample was diluted due to the presence of Total Calcium which interferes with Copper: 10ABLC (480-154771-7). Elevated reporting limits (RLs) are provided.

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL) associated with batch 480-479249 contained Total Chromium and Zinc above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples was not performed. (LCS 480-477677/2-A) and (MB 480-477677/1-A)

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL) associated with batch 480-479425 contained Total Potassium above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples was not performed. 12ABLC (480-154840-1)

Method(s) 6010C: The Low Level Continuing Calibration Verification, (CCVL) associated with batch 480-479249 contained Total Zinc above the upper quality control limit. The associated samples were either ND for the affected analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples was not performed. 12ABLC (480-154840-1)

Method(s) 6010C: The results reported for Total Calcium, Cobalt, Iron, and Manganese for the following sample do not concur with results previously reported for this site: 12ABLC (480-154840-1). Reanalysis was performed, and the result(s) confirmed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 480-154771-1 (Continued)

Laboratory: Eurofins TestAmerica, Buffalo (Continued)

General Chemistry

Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 10ABLC (480-154771-7), 11ABCLC (480-154771-8), 123LC (480-154771-9), 7LC (480-154771-10), 9ABCLC (480-154771-11) and 12ABLC (480-154840-1). The reporting limits (RLs) have been adjusted proportionately.

Method(s) 310.2: The following samples were diluted due to the nature of the sample matrix: 11ABCLC (480-154771-8), 123LC (480-154771-9) and 7LC (480-154771-10). Elevated reporting limits (RLs) are provided.

Method(s) 353.2: The results reported for the following samples do not concur with results previously reported for this site: 11ABCLC (480-154771-8) and 12ABLC (480-154840-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 9038: The results reported for the following sample do not concur with results previously reported for this site: 12ABLC (480-154840-1). Reanalysis was performed, and the result(s) confirmed.

Method(s) 9251: The following samples were diluted due to the nature of the sample matrix: 10ABLC (480-154771-7), 11ABCLC (480-154771-8), 123LC (480-154771-9), 7LC (480-154771-10), 9ABCLC (480-154771-11) and 12ABLC (480-154840-1). Elevated reporting limits (RLs) are provided.

Method(s) Distill/Ammonia: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 10ABLC (480-154771-7), 11ABCLC (480-154771-8), 123LC (480-154771-9), 7LC (480-154771-10), 9ABCLC (480-154771-11) and 12ABLC (480-154840-1). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3510C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 10ABLC (480-154771-7), 11ABCLC (480-154771-8), 123LC (480-154771-9), 7LC (480-154771-10), 9ABCLC (480-154771-11) and 12ABLC (480-154840-1). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Waste Management
Job ID: 480-154771-1
Project/Site: Crossroads ME-Ann Leachate

Laboratory: Eurofins TestAmerica, Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
Maine	State Program	1	NY00044	12-04-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
9038		Leachate	Sulfate
9251		Leachate	Chloride
Field Sampling		Leachate	Field EH/ORP
Field Sampling		Leachate	Field pH
Field Sampling		Leachate	Oxygen, Dissolved
Field Sampling		Leachate	Specific Conductance
Field Sampling		Leachate	Temperature
Field Sampling		Leachate	Turbidity

Quantitation Limit Exceptions Summary

Client: Waste Management
Job ID: 480-154771-1
Project/Site: Crossroads ME-Ann Leachate

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Analyte	Matrix	Prep Type	Unit	Client RL	Lab PQL
8270D	Benzyl alcohol	Leachate	Total/NA	ug/L	10	20
8270D	Dibenzofuran	Leachate	Total/NA	ug/L	5.0	10
6010C	Aluminum	Leachate	Total/NA	mg/L	0.080	0.20
6010C	Arsenic	Leachate	Total/NA	mg/L	0.0090	0.015
6010C	Calcium	Leachate	Total/NA	mg/L	0.15	0.50
6010C	Iron	Leachate	Total/NA	mg/L	0.030	0.05
6010C	Lead	Leachate	Total/NA	mg/L	0.0050	0.01
6010C	Sodium	Leachate	Total/NA	mg/L	0.40	1.0
9251	Chloride	Leachate	Total/NA	mg/L	0.50	1.0
SM 2540C	Total Dissolved Solids	Leachate	Total/NA	mg/L	5.0	10

RE: Katahdin Lab Number: SM5823
Project ID: Waste Management - Crossroads
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): June 12, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Leslie Dimond

Leslie Dimond - Quality Assurance Officer **Date** 06/20/2019

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

RE: Katahdin Lab Number: SM5886
Project ID: Waste Management - Crossroads
Project Manager: Mr. Galen Nickerson
Sample Receipt Date(s): June 13, 2019

Dear Ms. Shaffer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Leslie Dimond

Leslie Dimond - Quality Assurance Officer

06/21/2019

Date

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 — The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 — Please refer to cover letter or narrative for further information.

H_ — Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 — The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 — The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 — The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 — The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 — The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 — As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 — The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 — The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.
